

Anexo – 1

Procedimiento de Ensayo con el Equipo

Rugosímetro Merlin

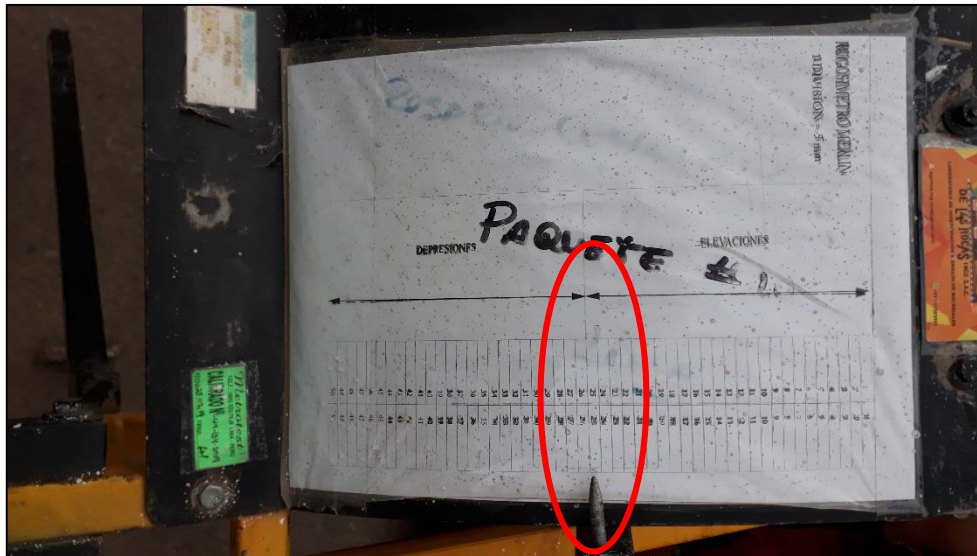

PROCEDIMIENTO DE ENSAYO CON EQUIPO MERLÍN

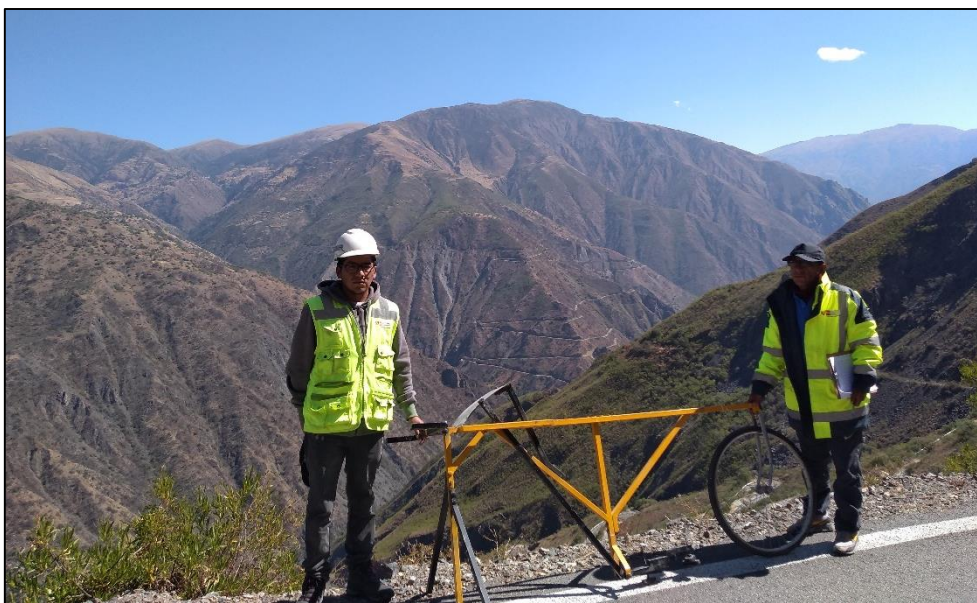

Fotografía 01. Verificación de Calibración del Equipo Merlín, Pastilla debajo del Patín Móvil.

Fotografía 02. Pastilla de 5 mm de Espesor.

Fotografía 03. Verificación de Calibración del Equipo Merlín, El Tablero marca en la división 25 en una superficie horizontal.

Fotografía 04. Personal Necesario para la Medición, Operario del Equipo y Asistente para anotar Lecturas del Tablero.

Fotografía 05. Medición y Recolección de Datos
En campo con el Equipo Merlín.

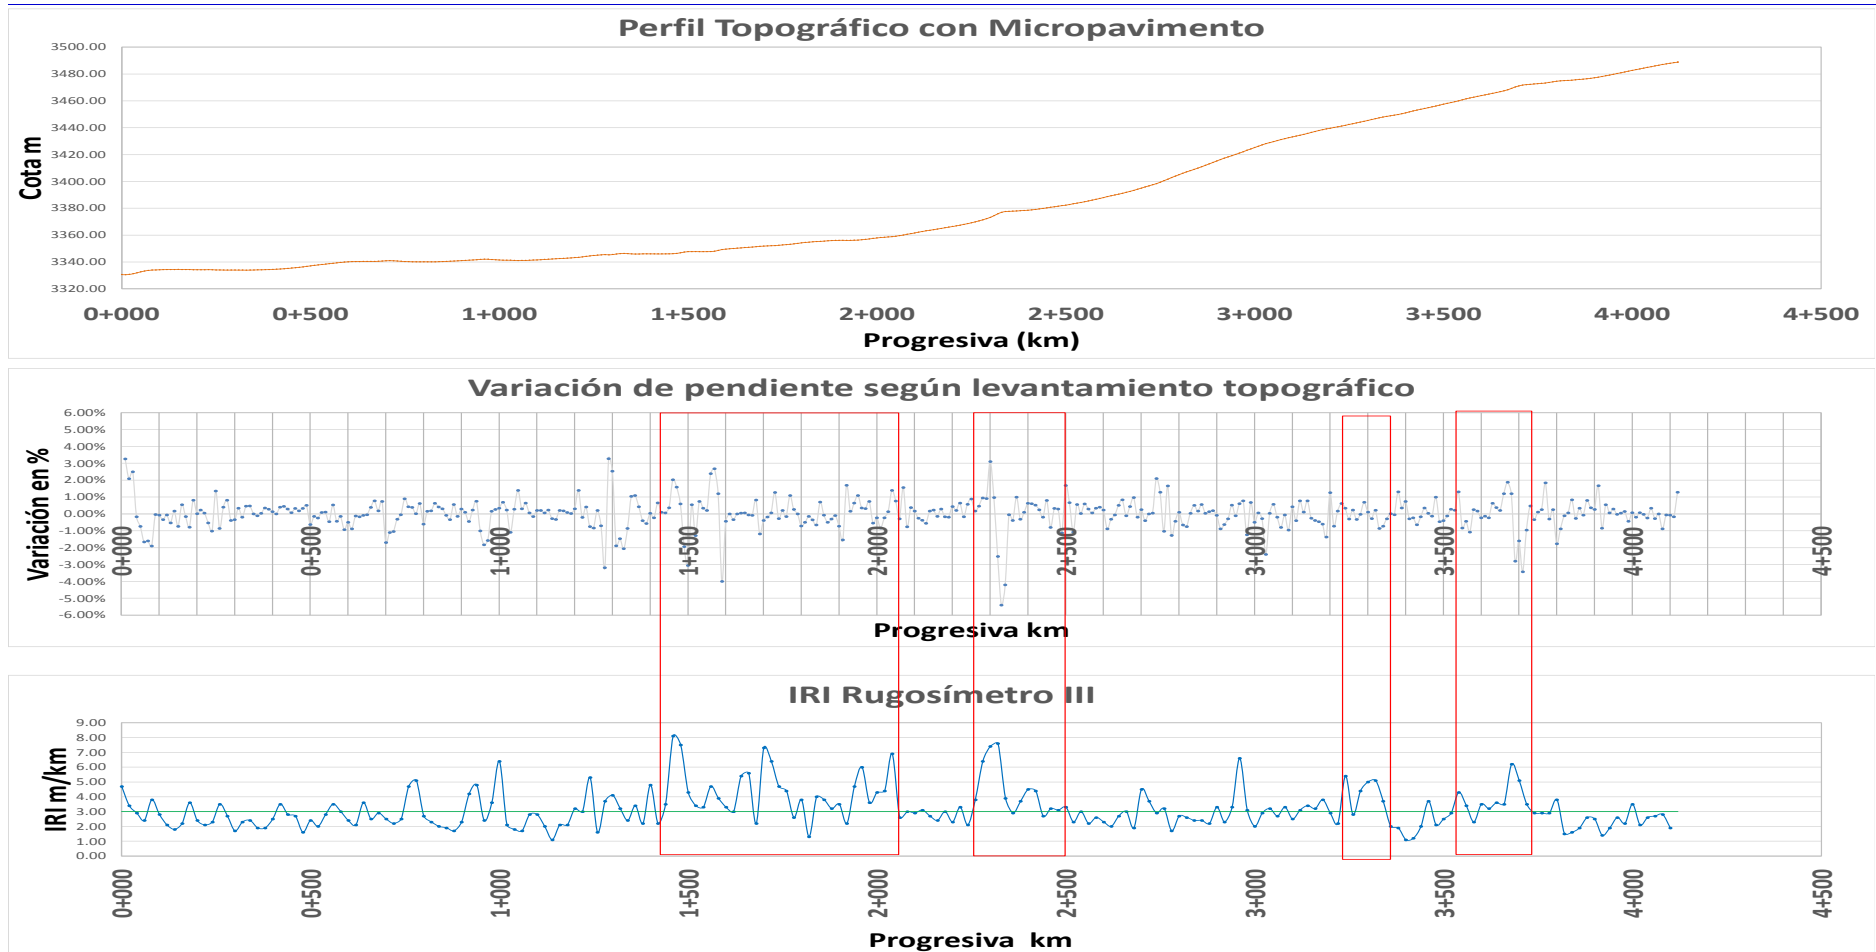

Fotografía 06. Medición y Recolección de Datos
En campo con el Equipo Merlín.

Anexo - 2

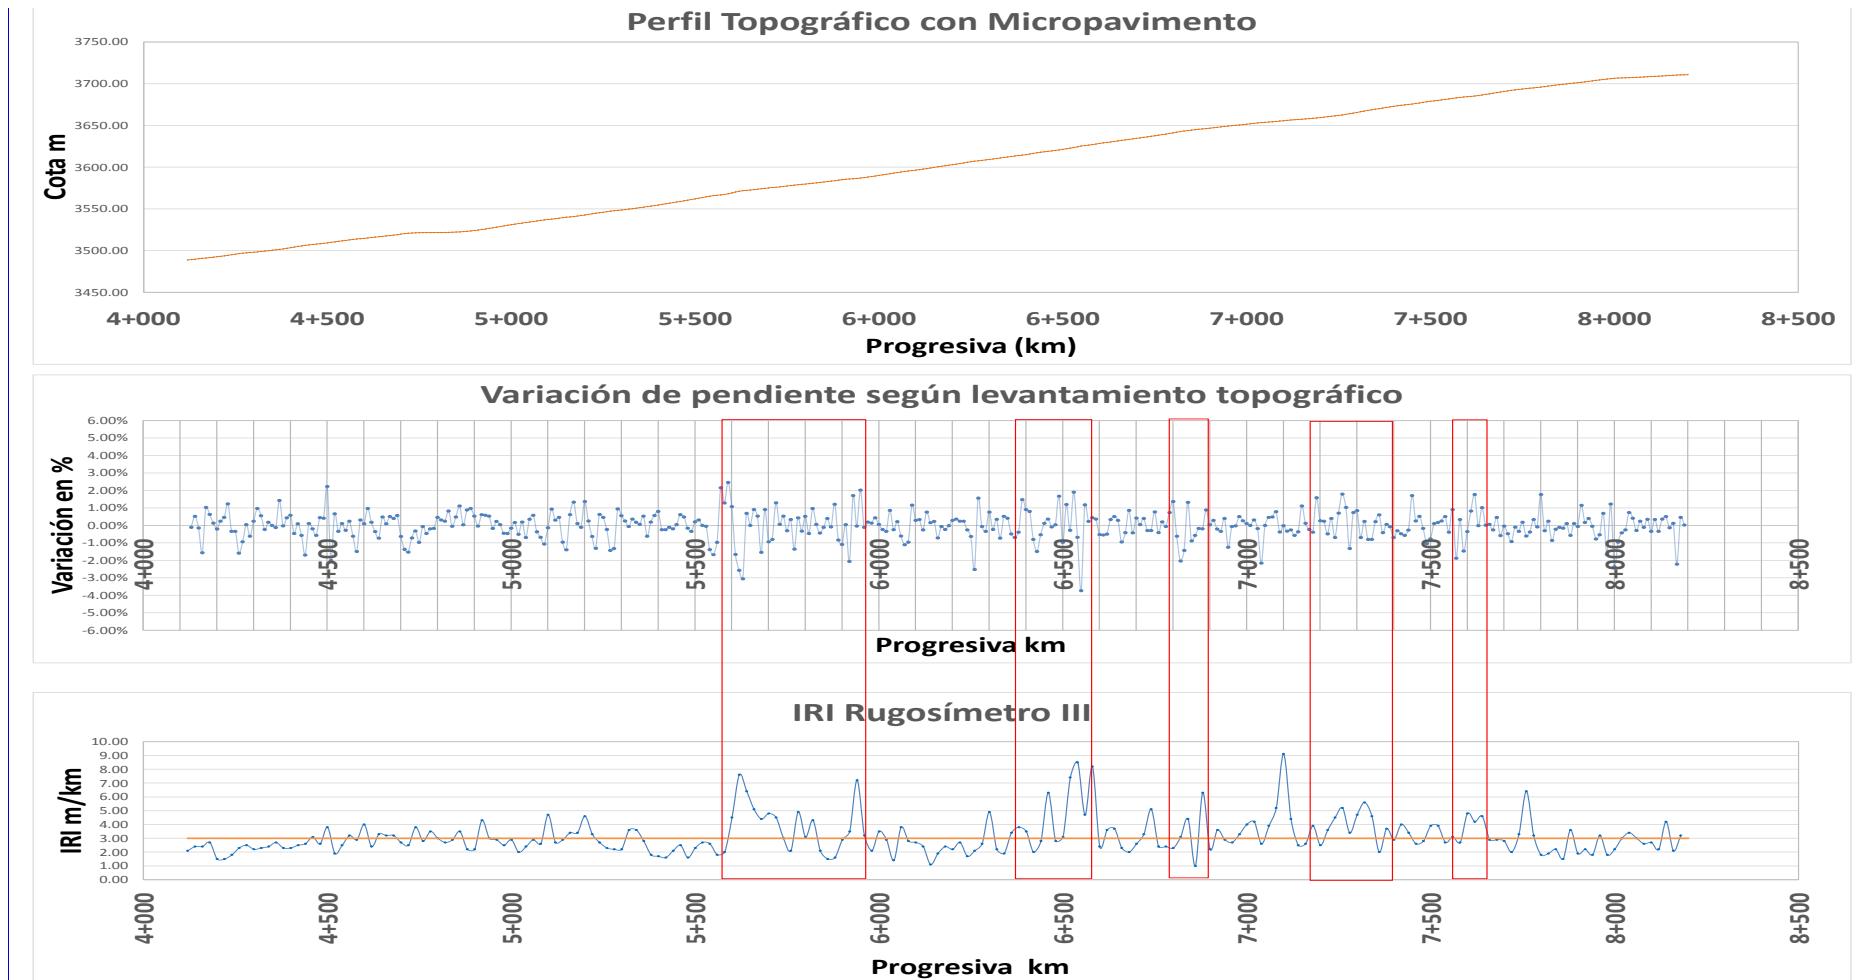

Gráficas de perfil, variación de pendiente y
valores de IRI

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 00+000- Km 04+120

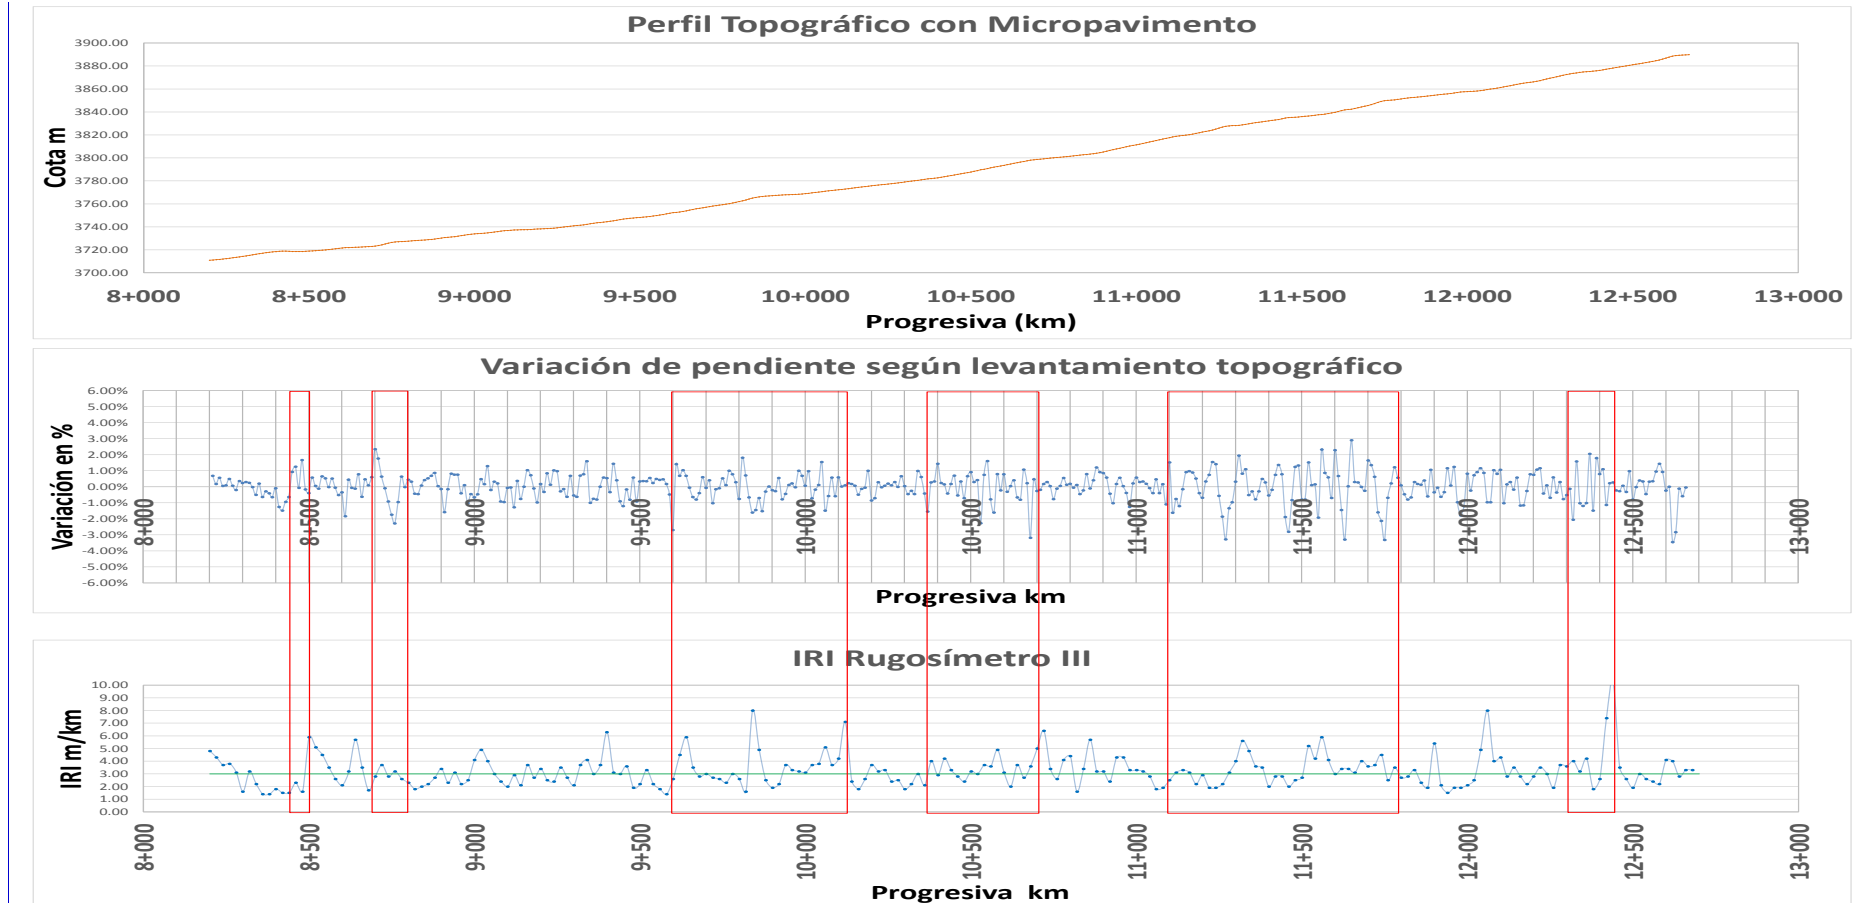

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 04+120 – Km 08+200

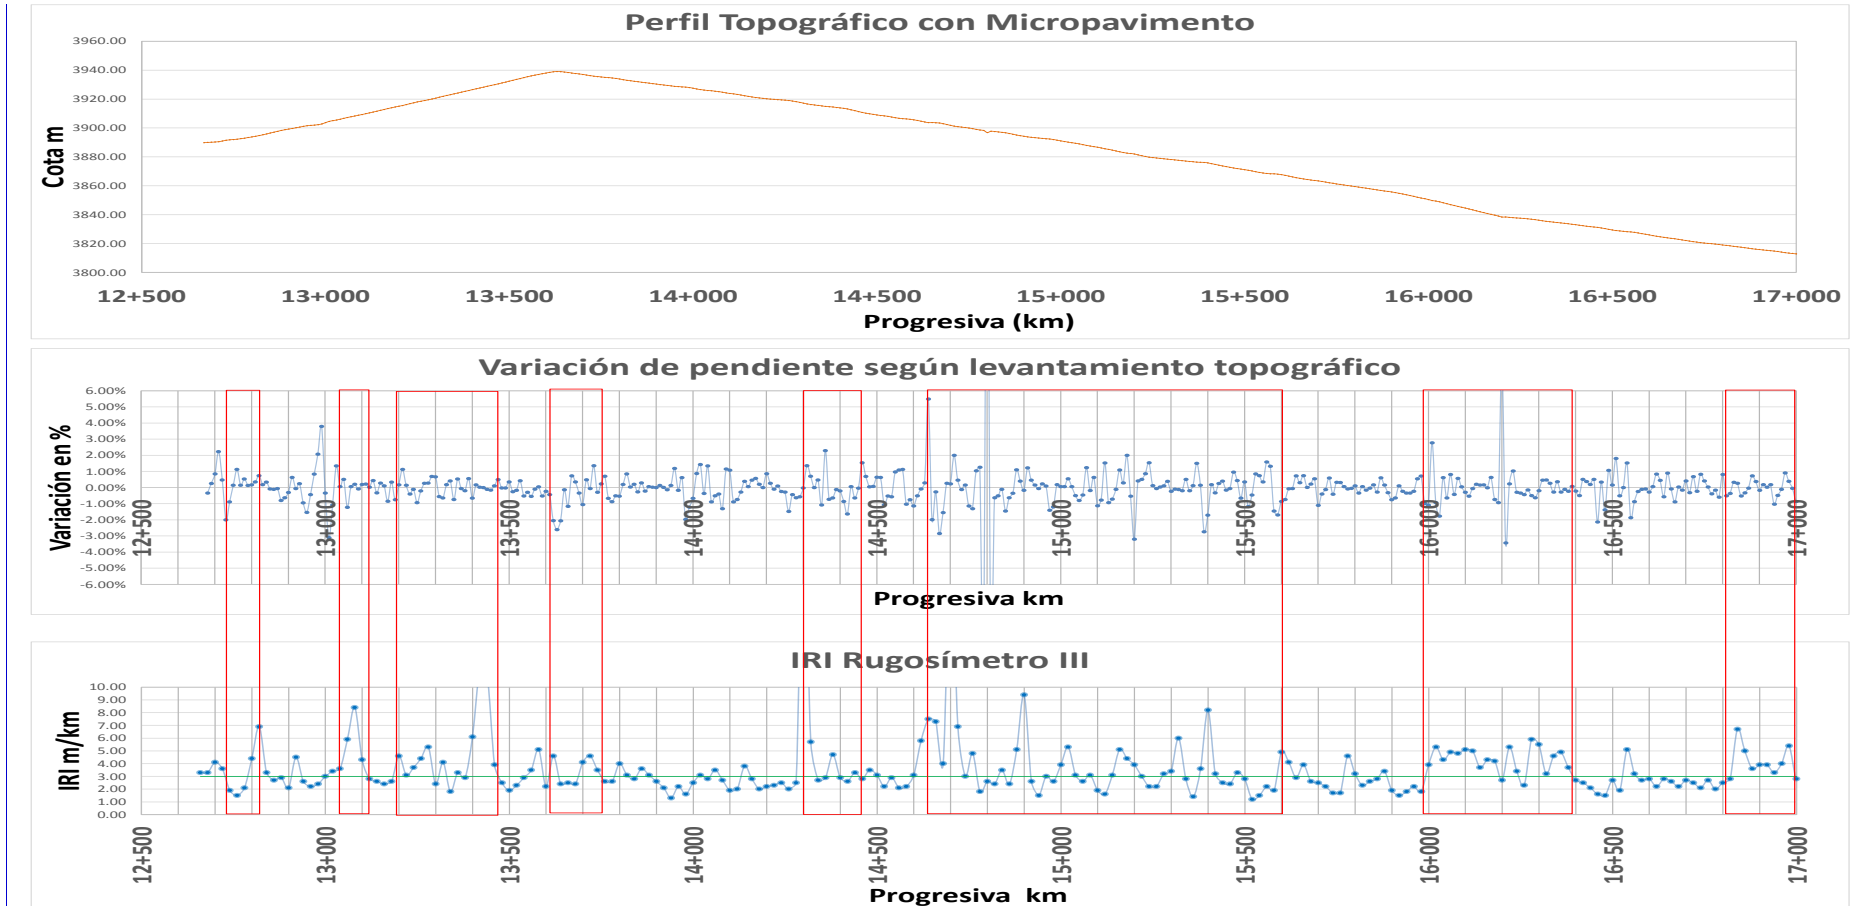

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 08+200- Km 12+670

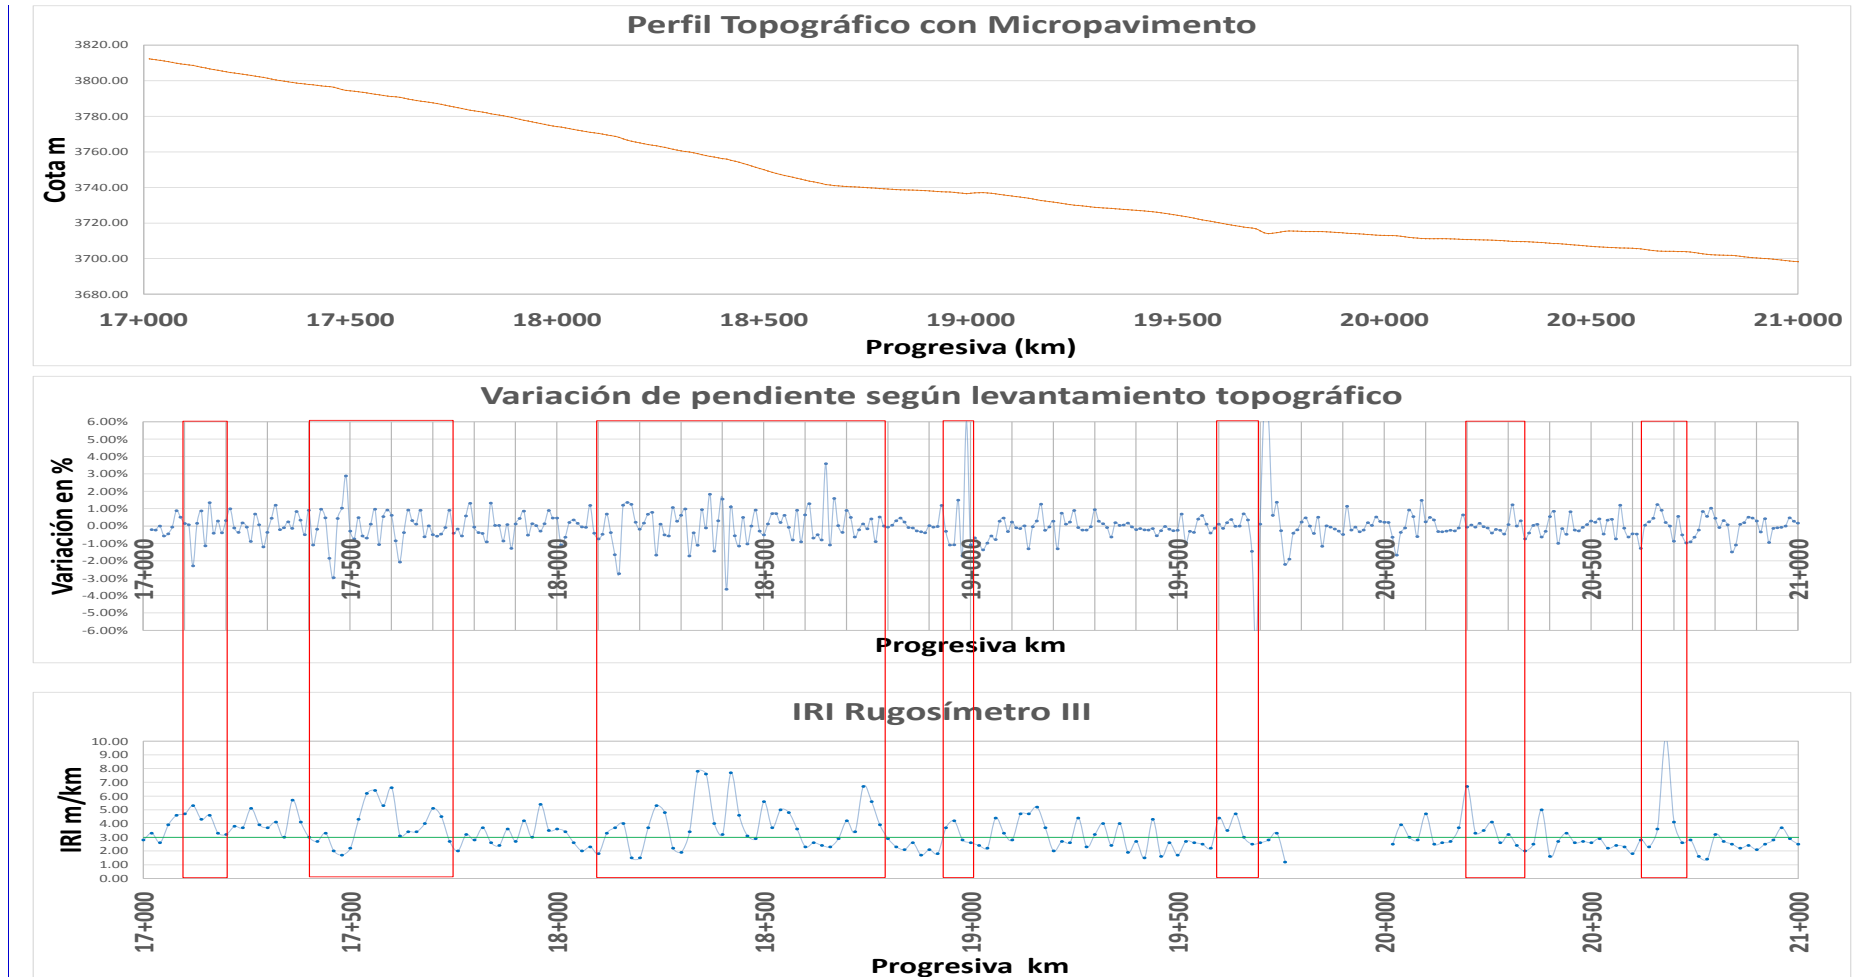

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 12+670- Km 17+014

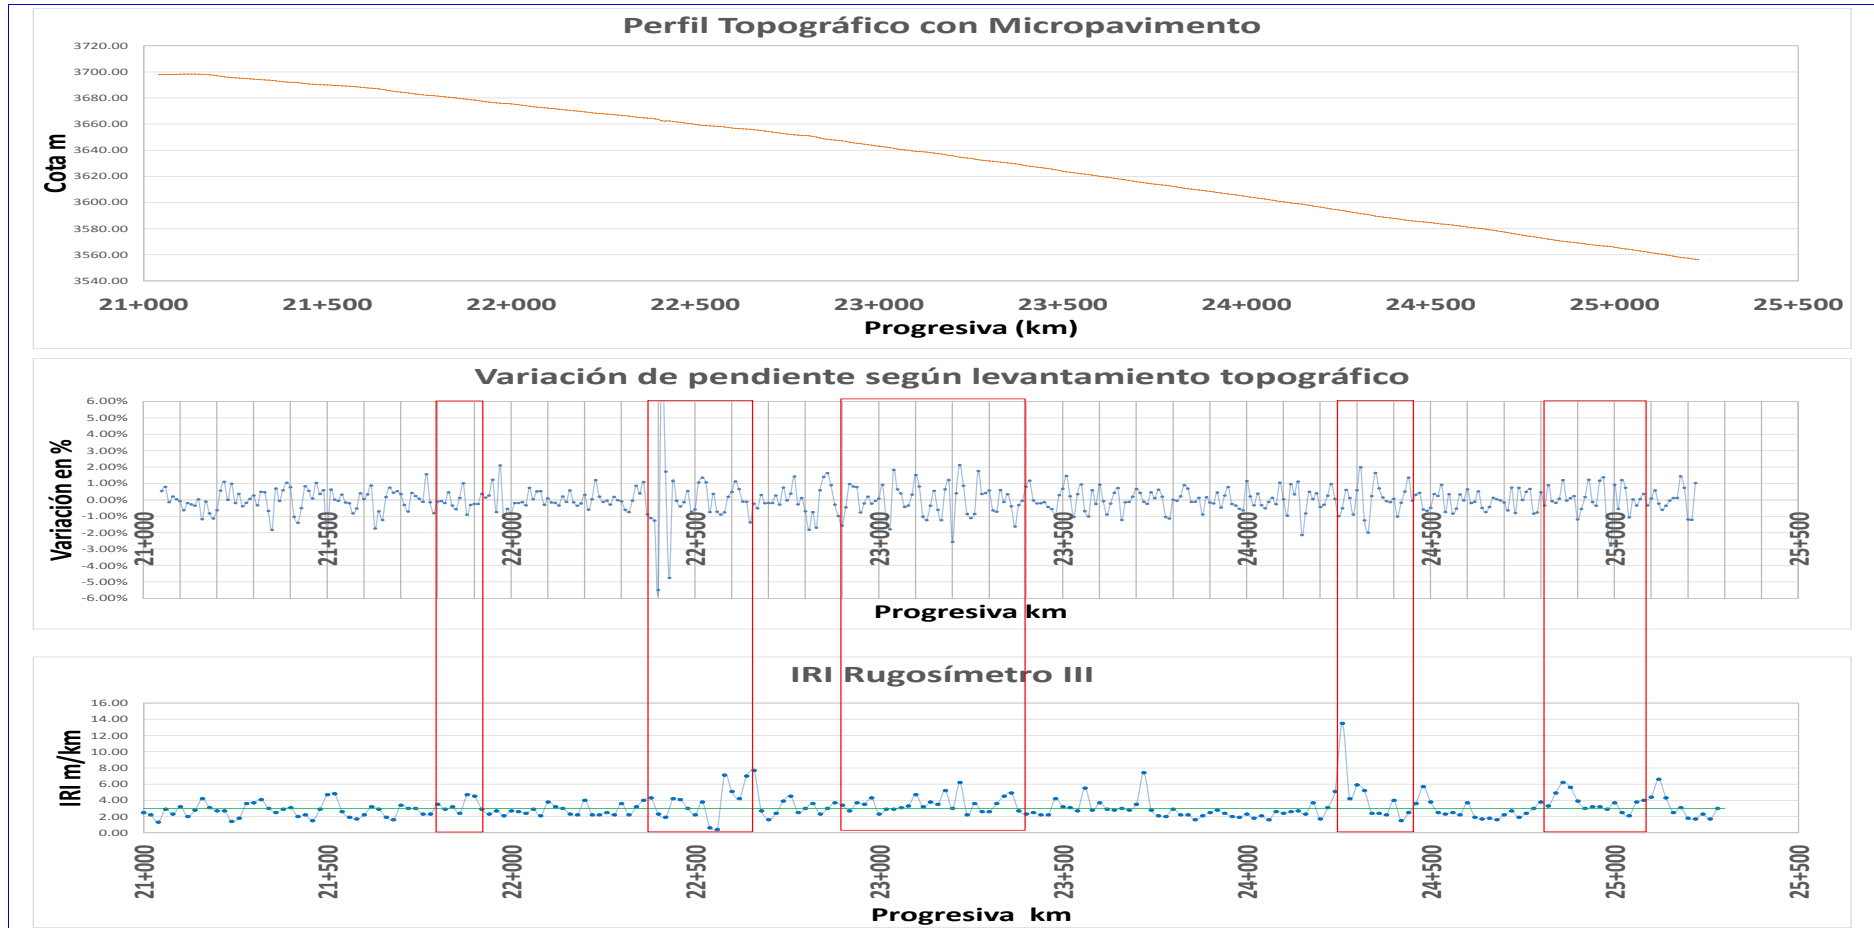

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 17+014- Km 21+042

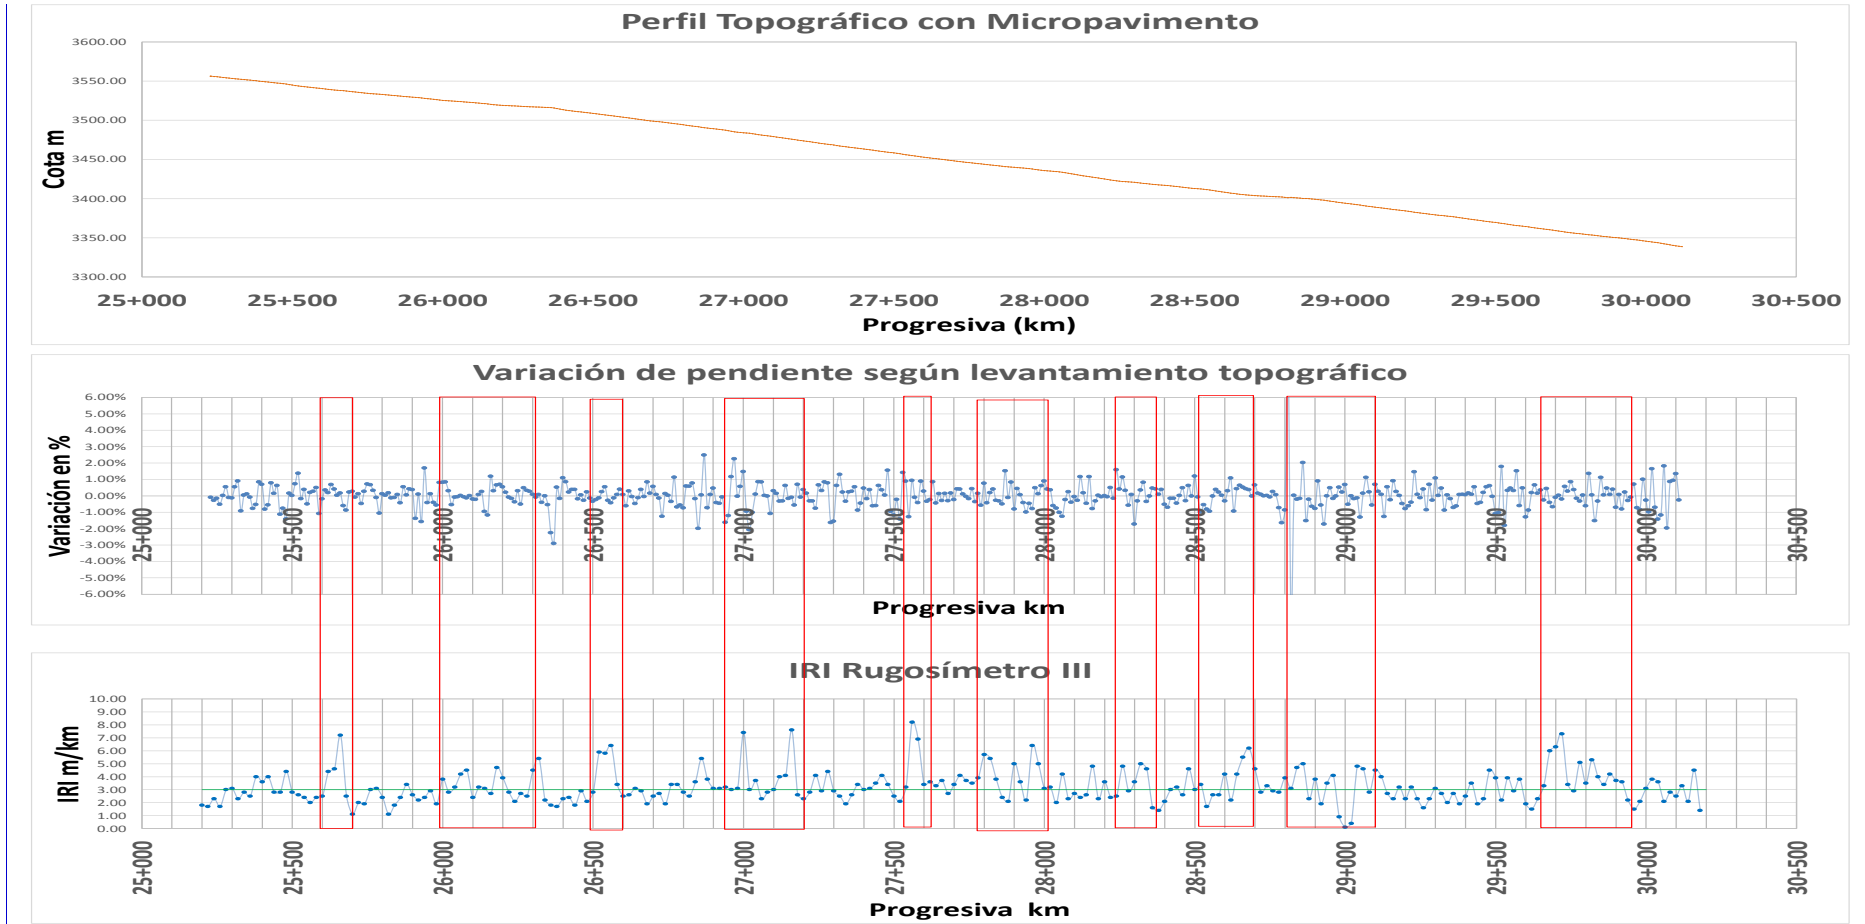

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 21+040- Km 25+228

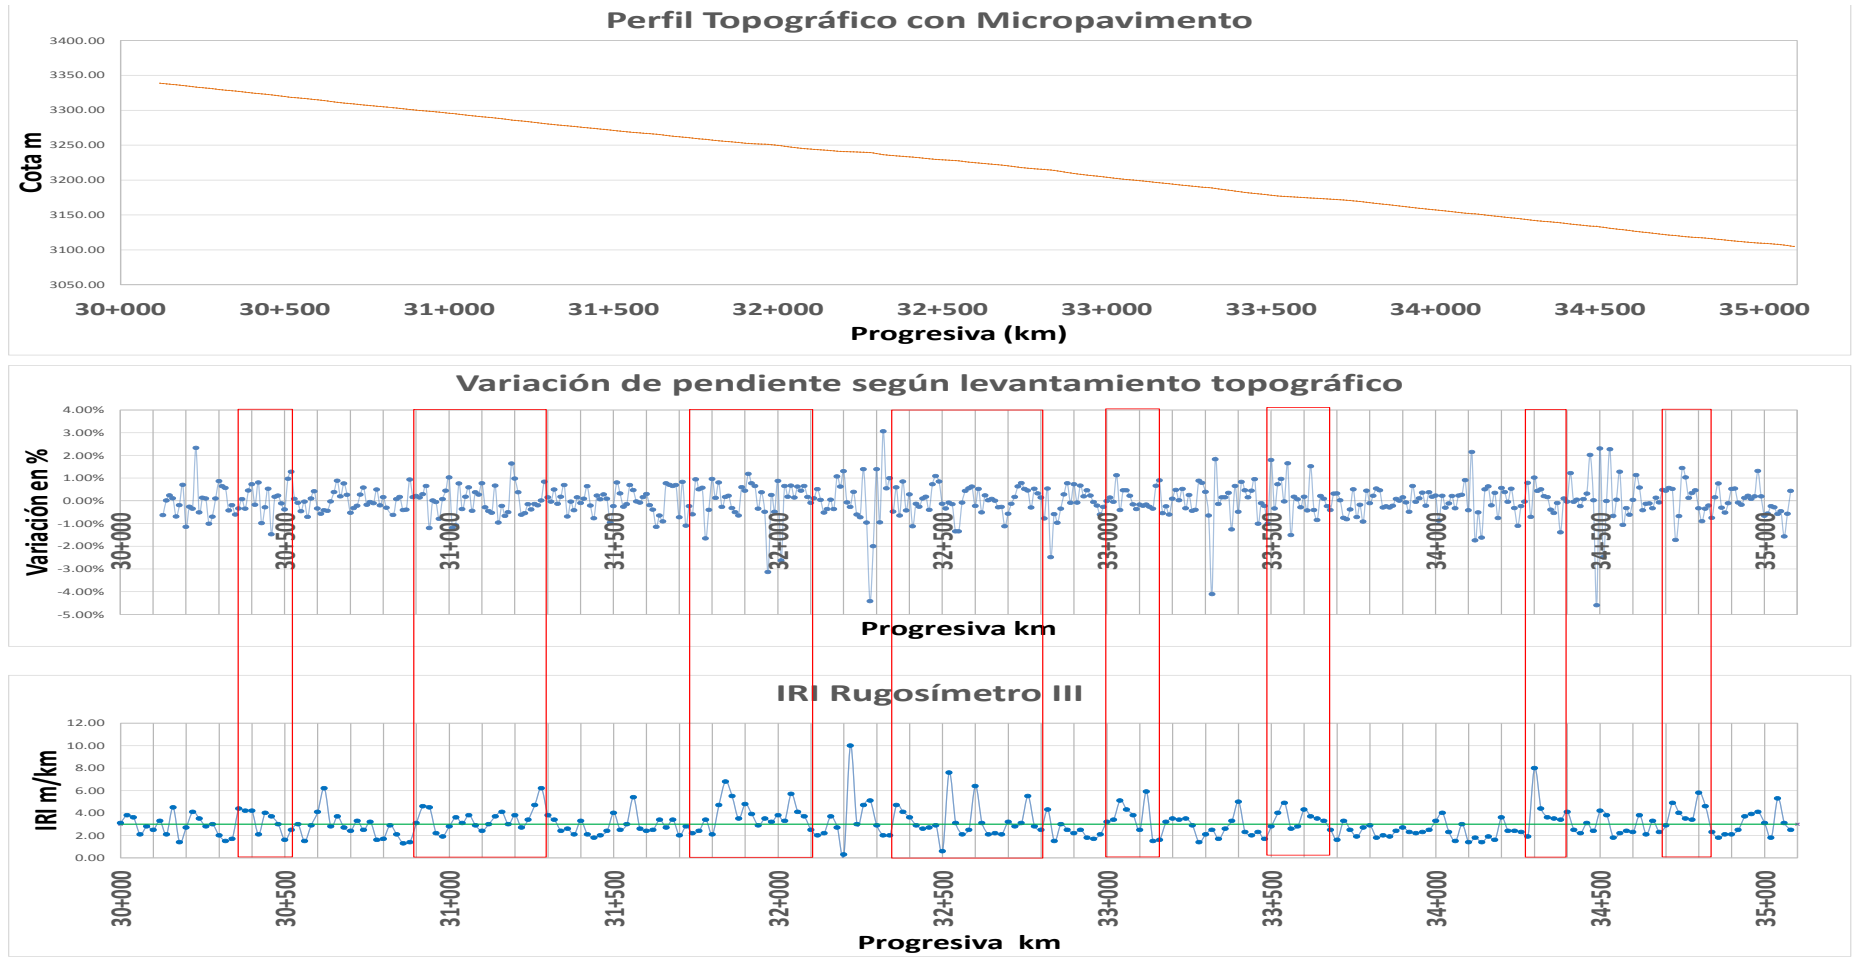

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 25+228- Km 30+120

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 30+120- Km 35+040

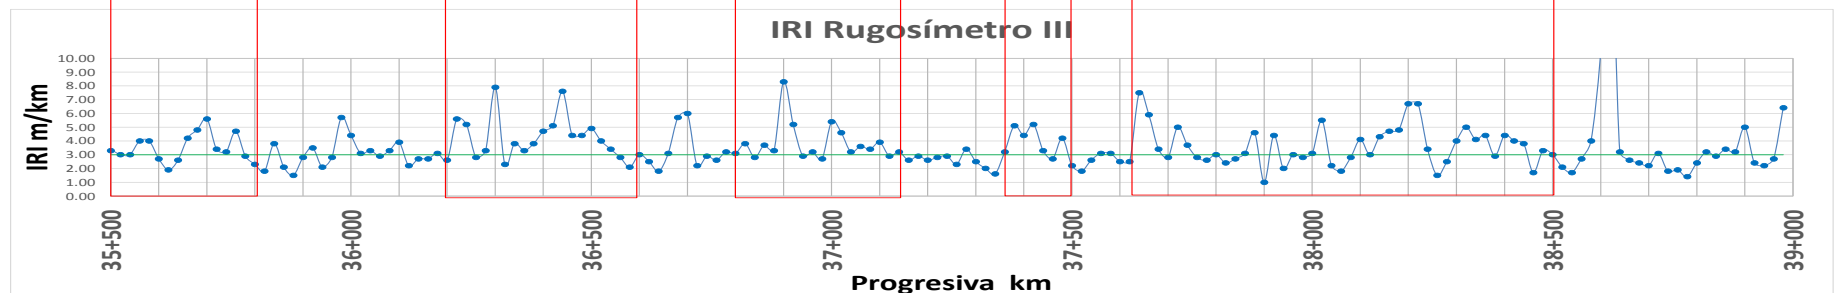

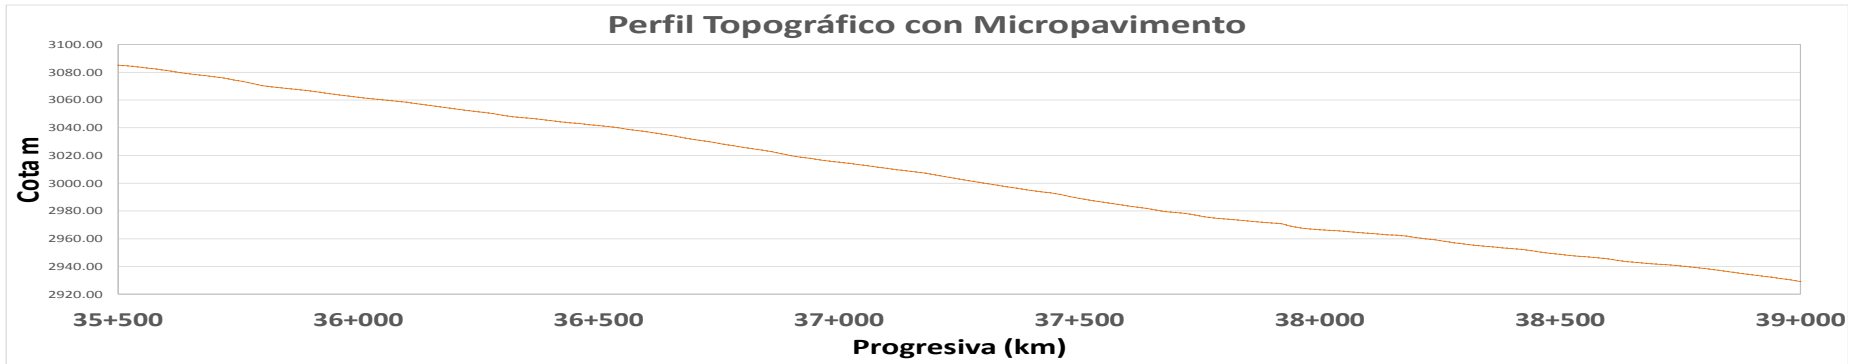

Fuente: Elaboro por el equipo de trabajo

Tramo II

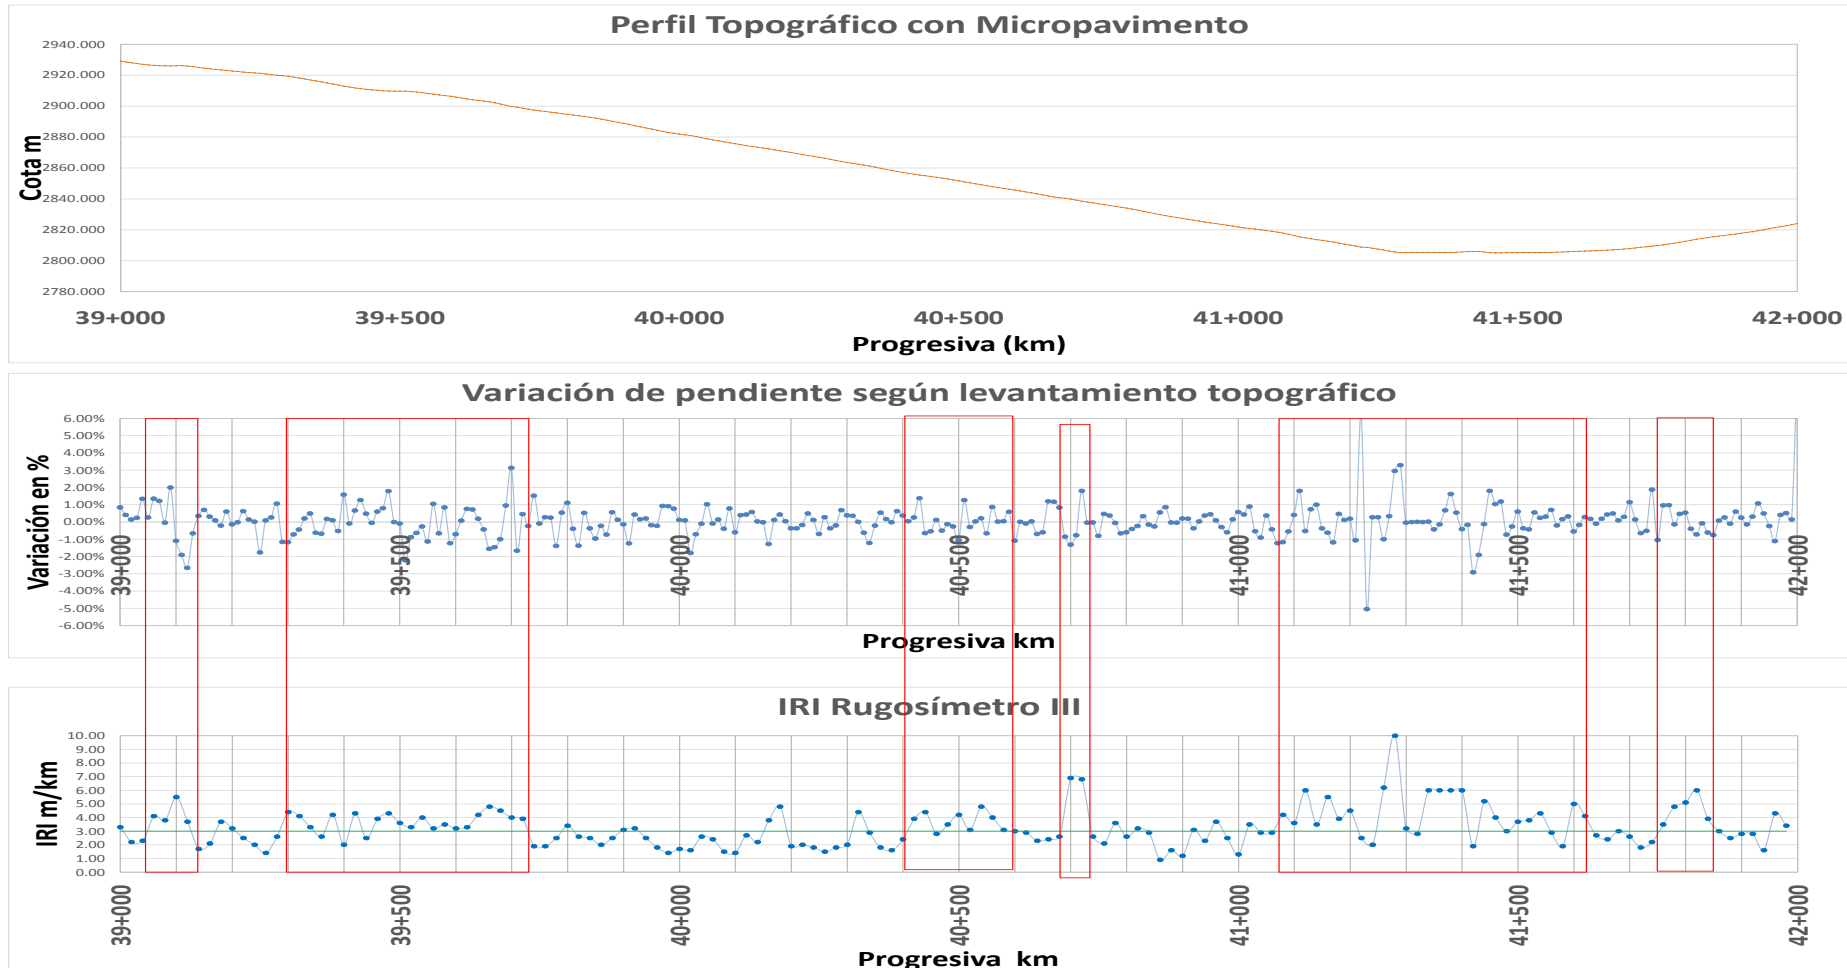

Chinchaypujio - Cotabambas

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 35+380- Km 39+000

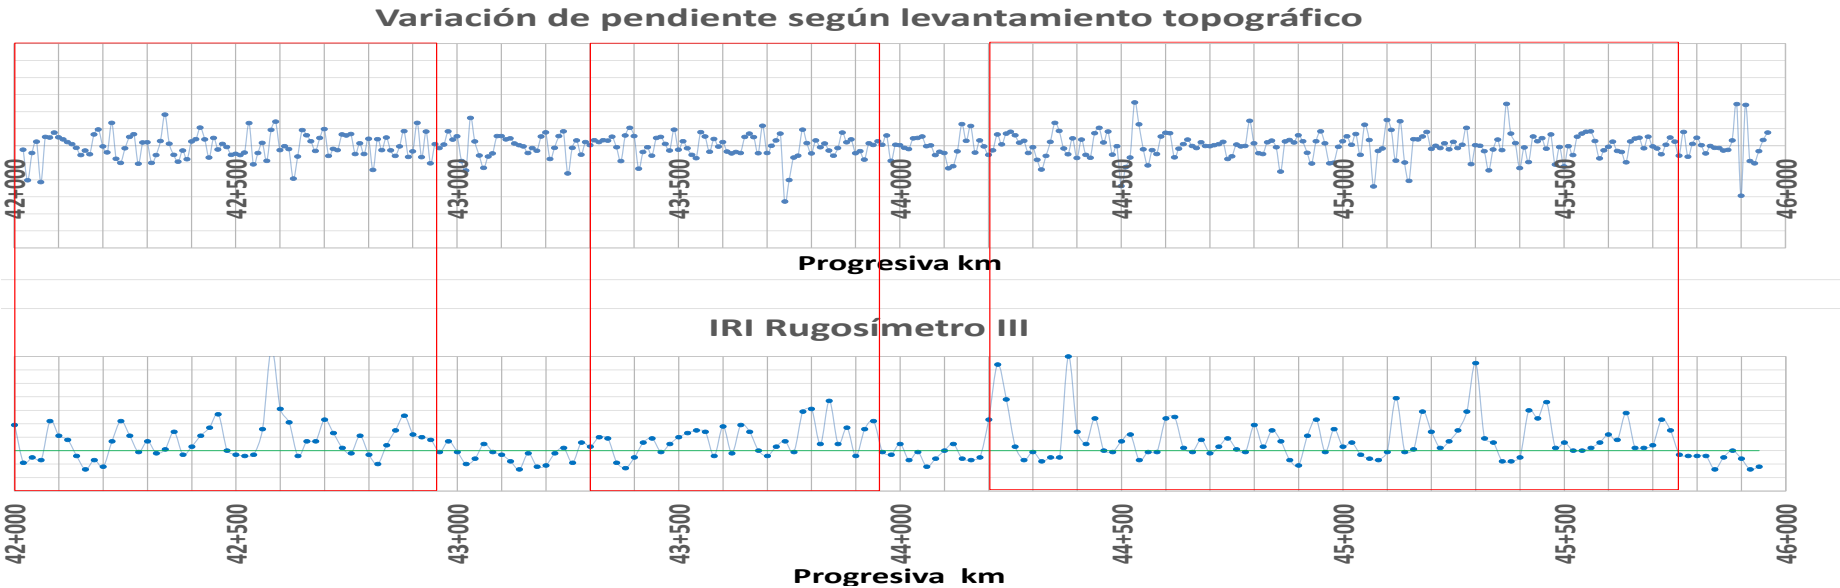

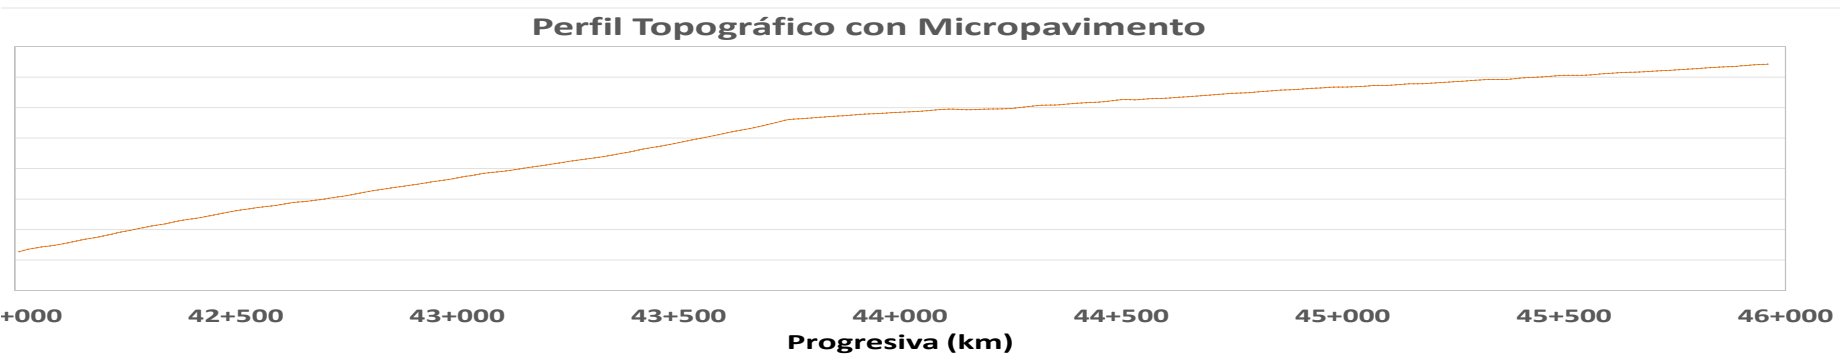

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 39+0000 – Km 42+0000

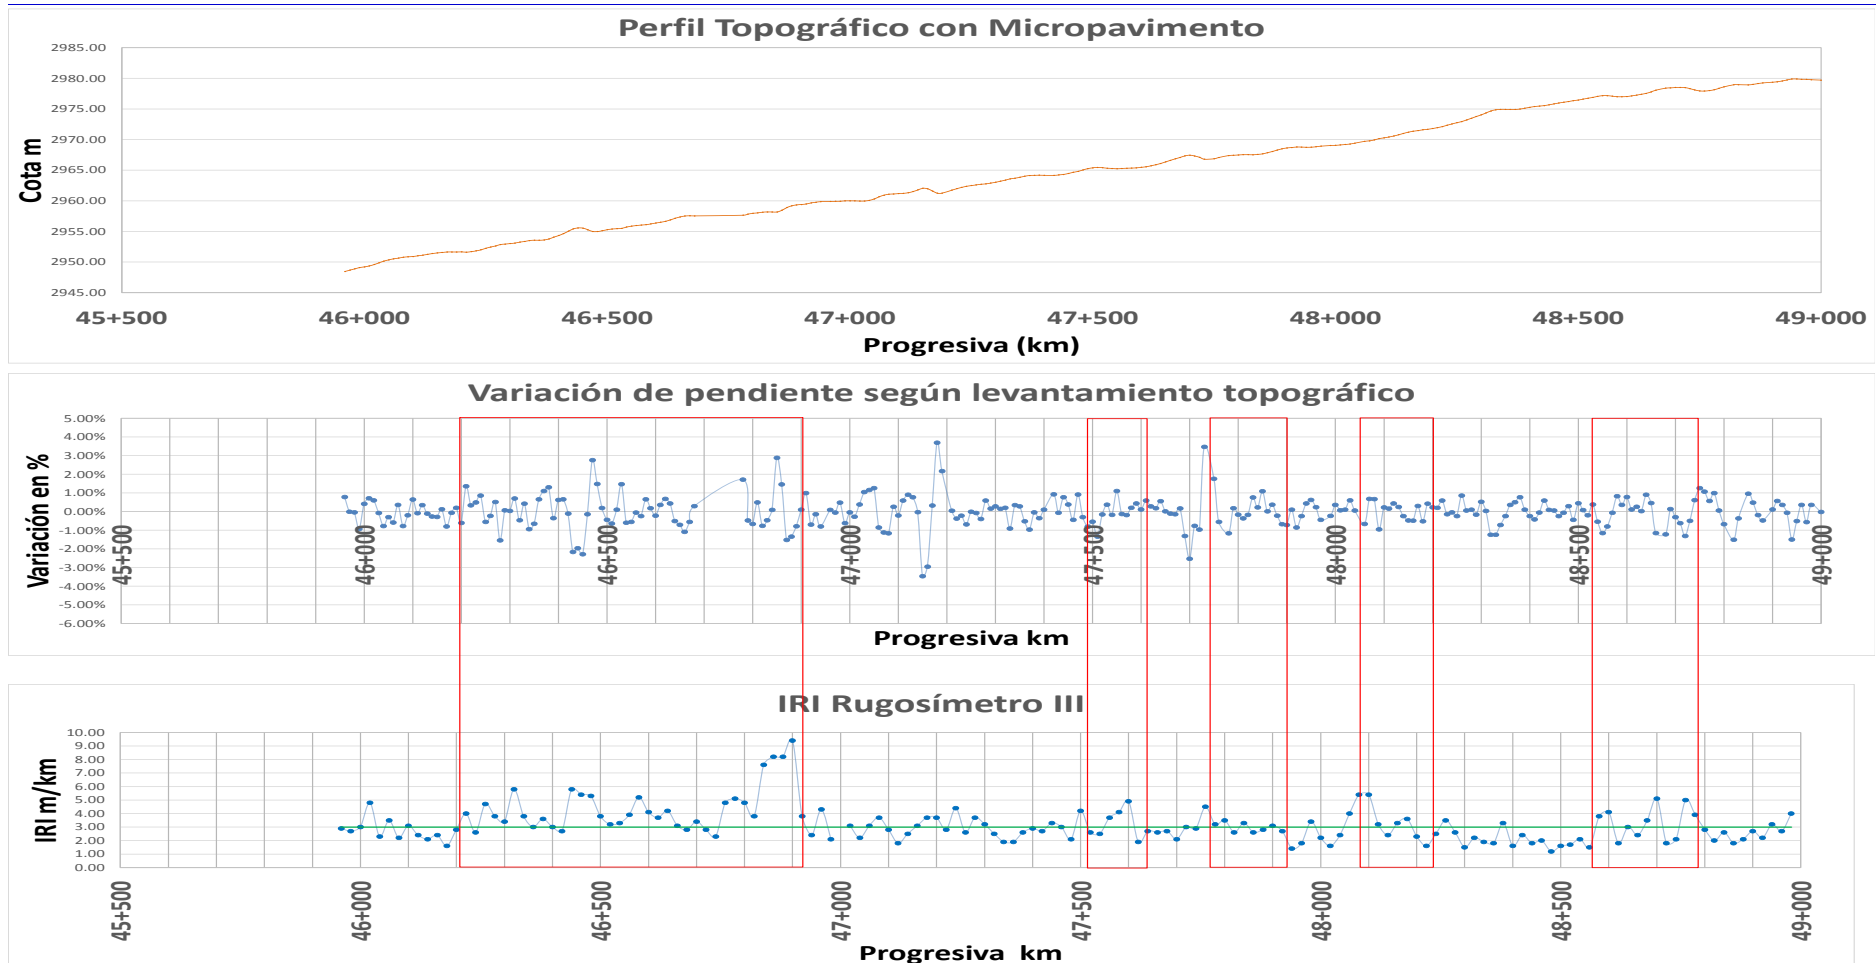

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 42+0000- Km 45+960

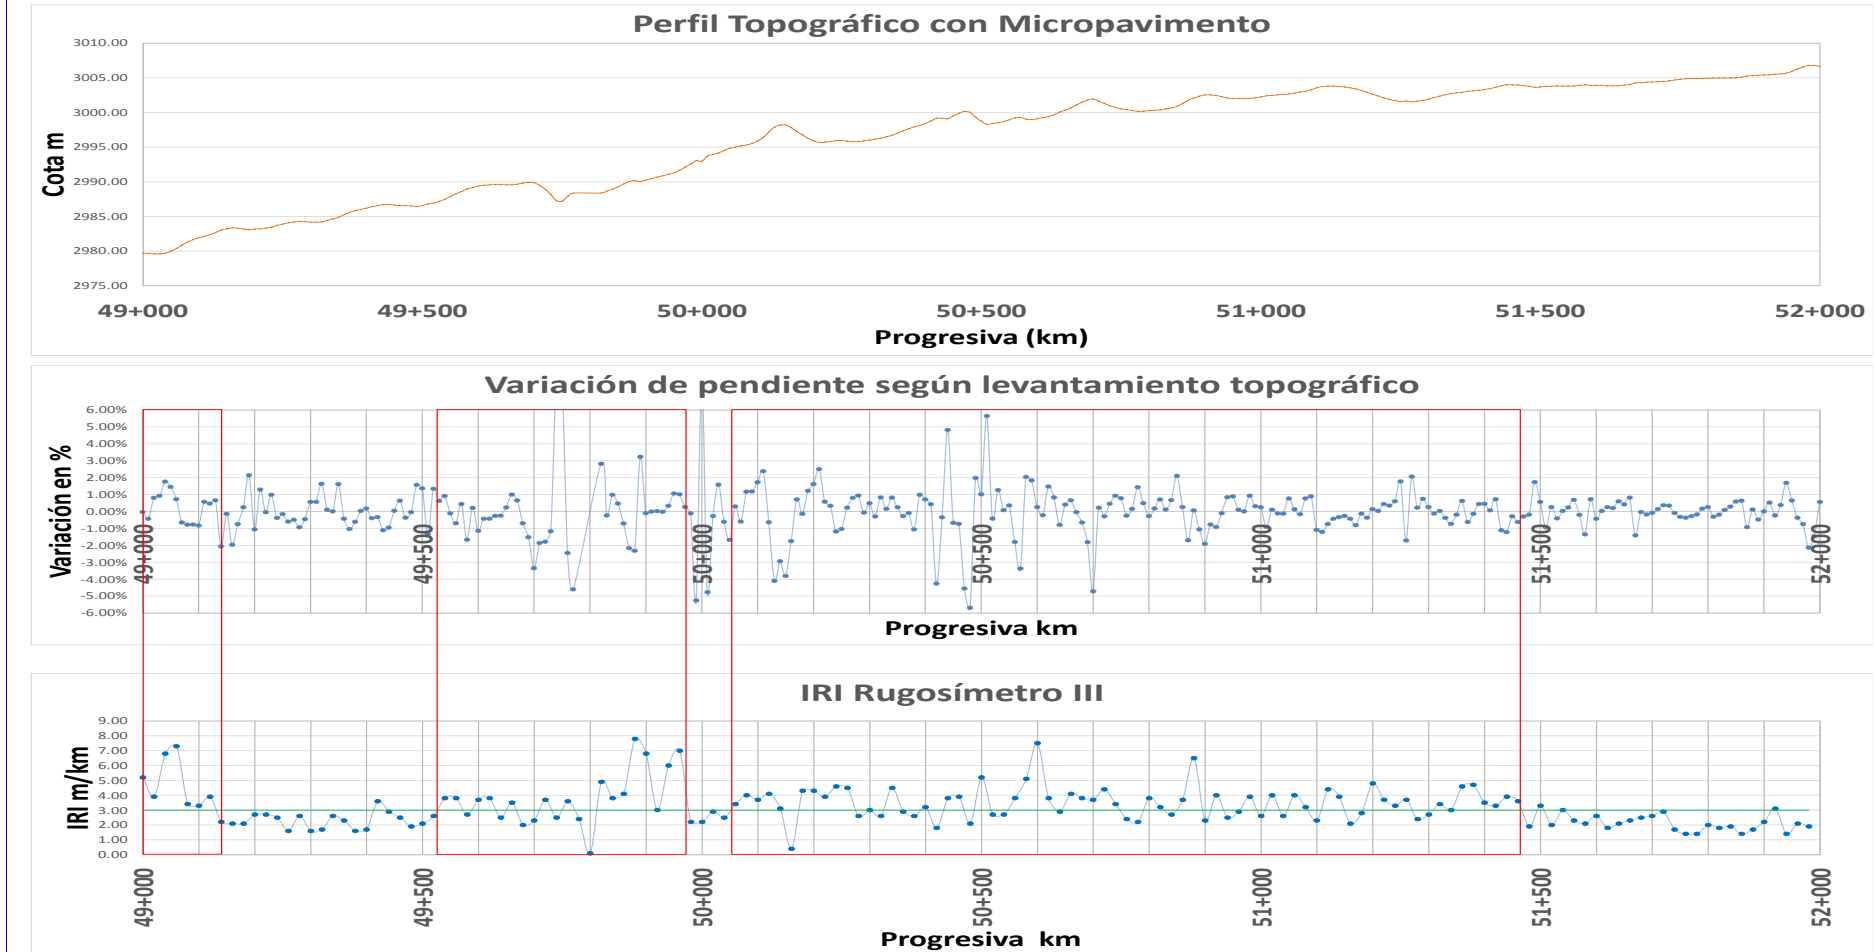

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 45+960- Km 49+000

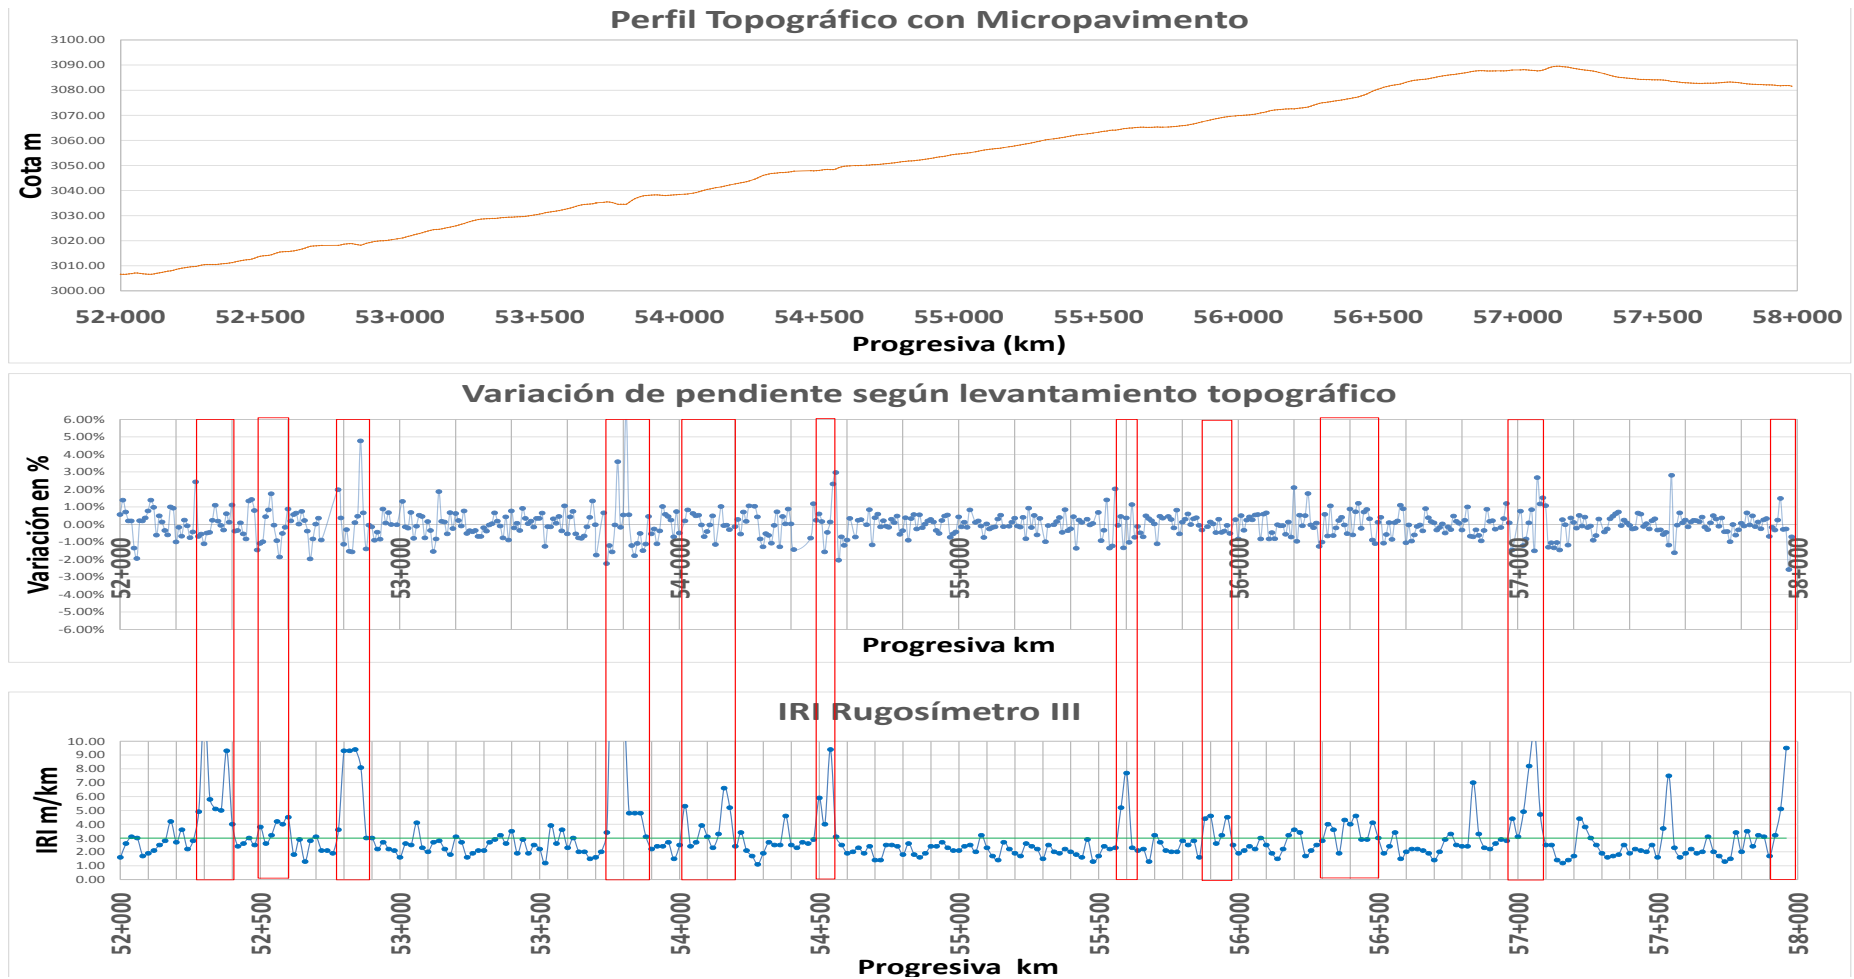

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 49+000- Km 52+000

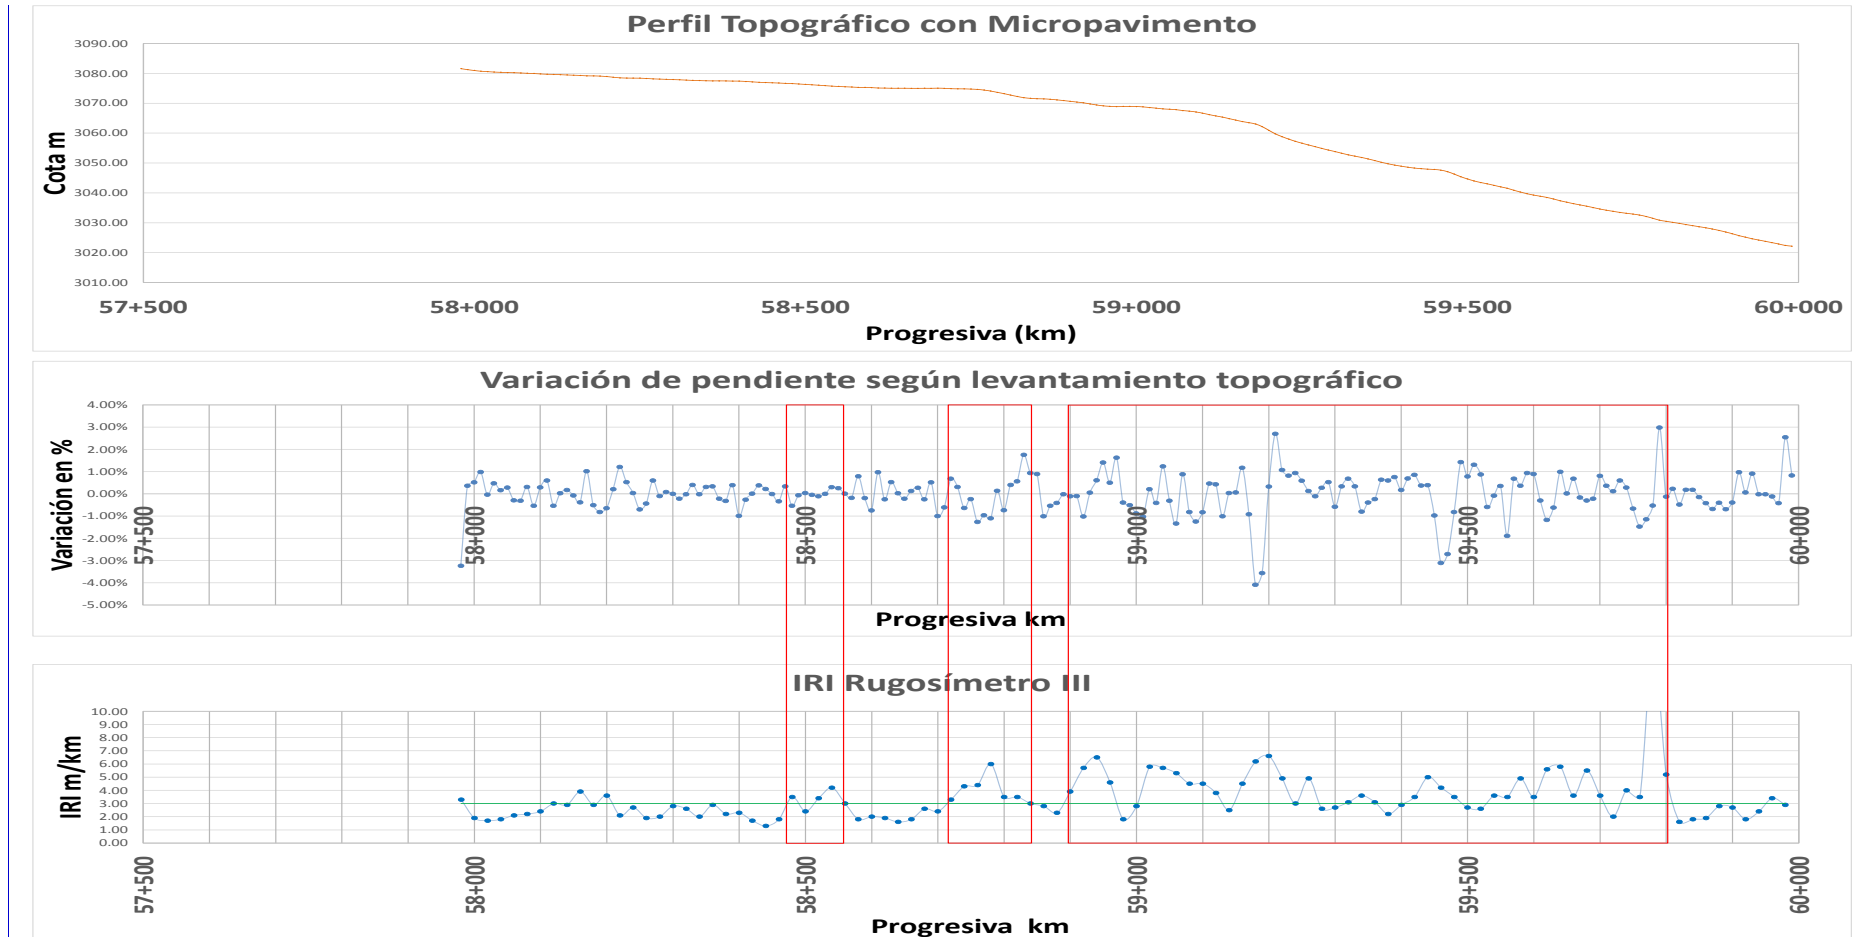

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 52+000- Km 57+980

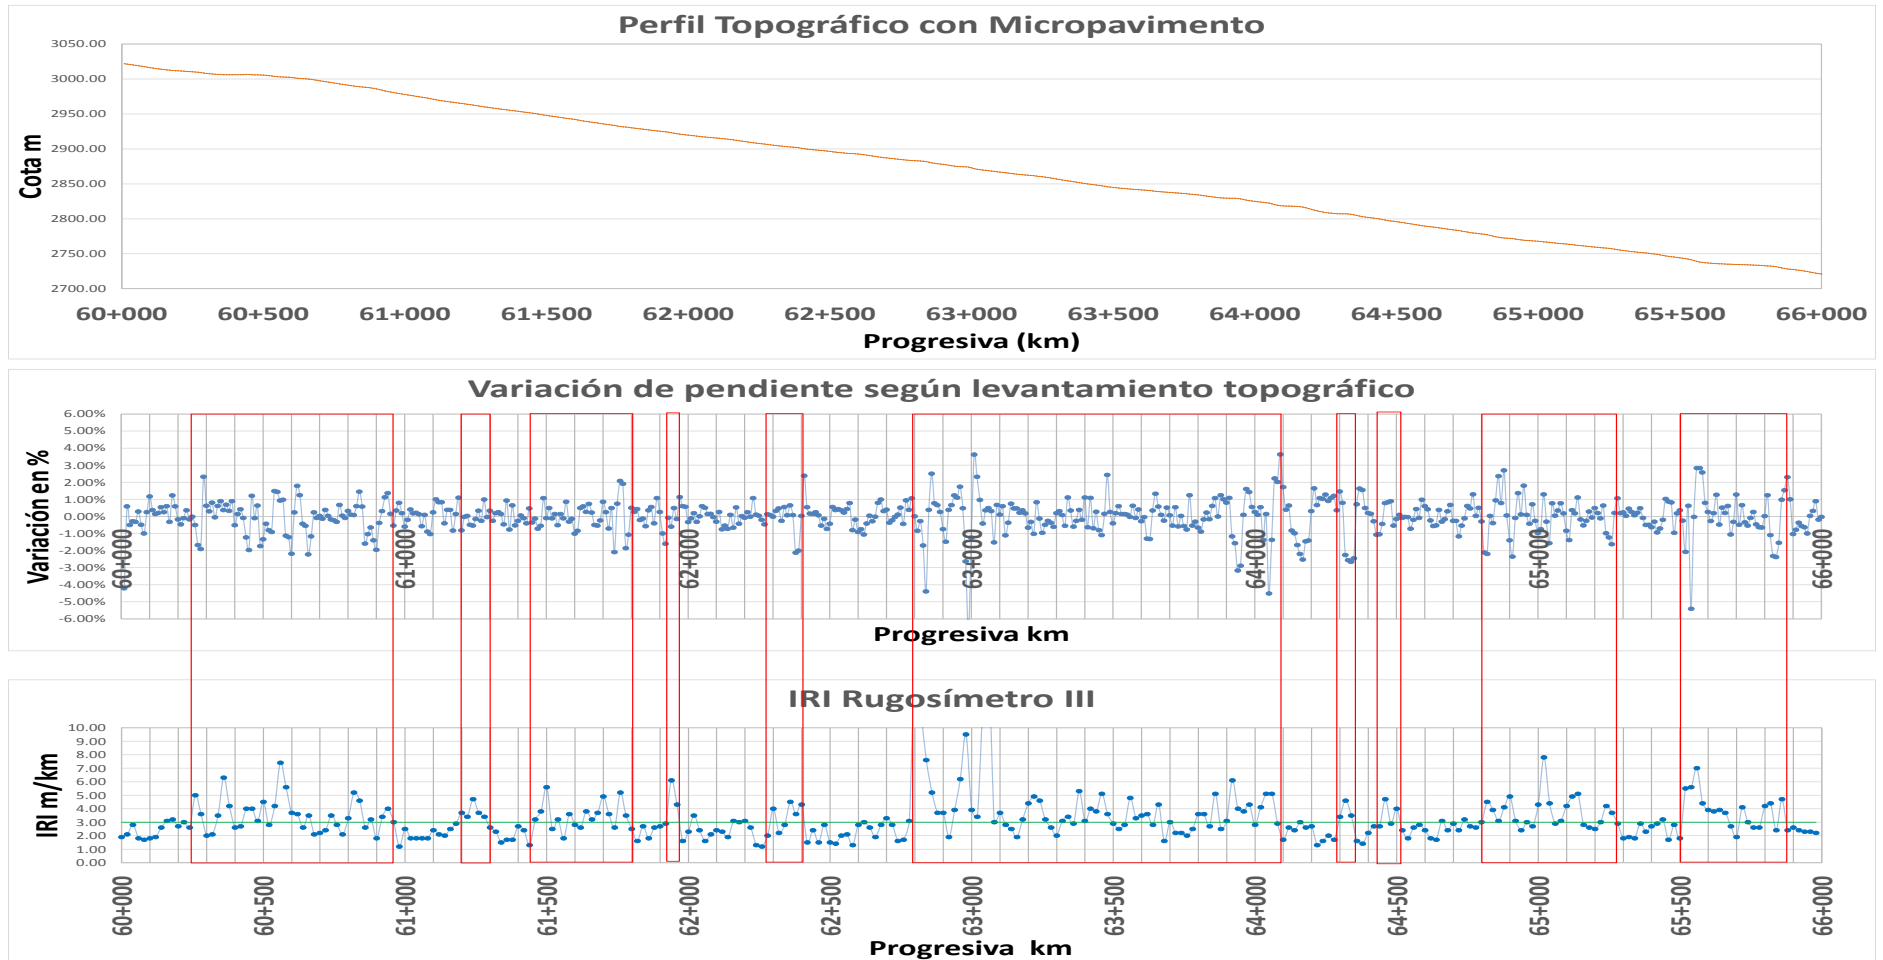

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 57+980- Km 60+000

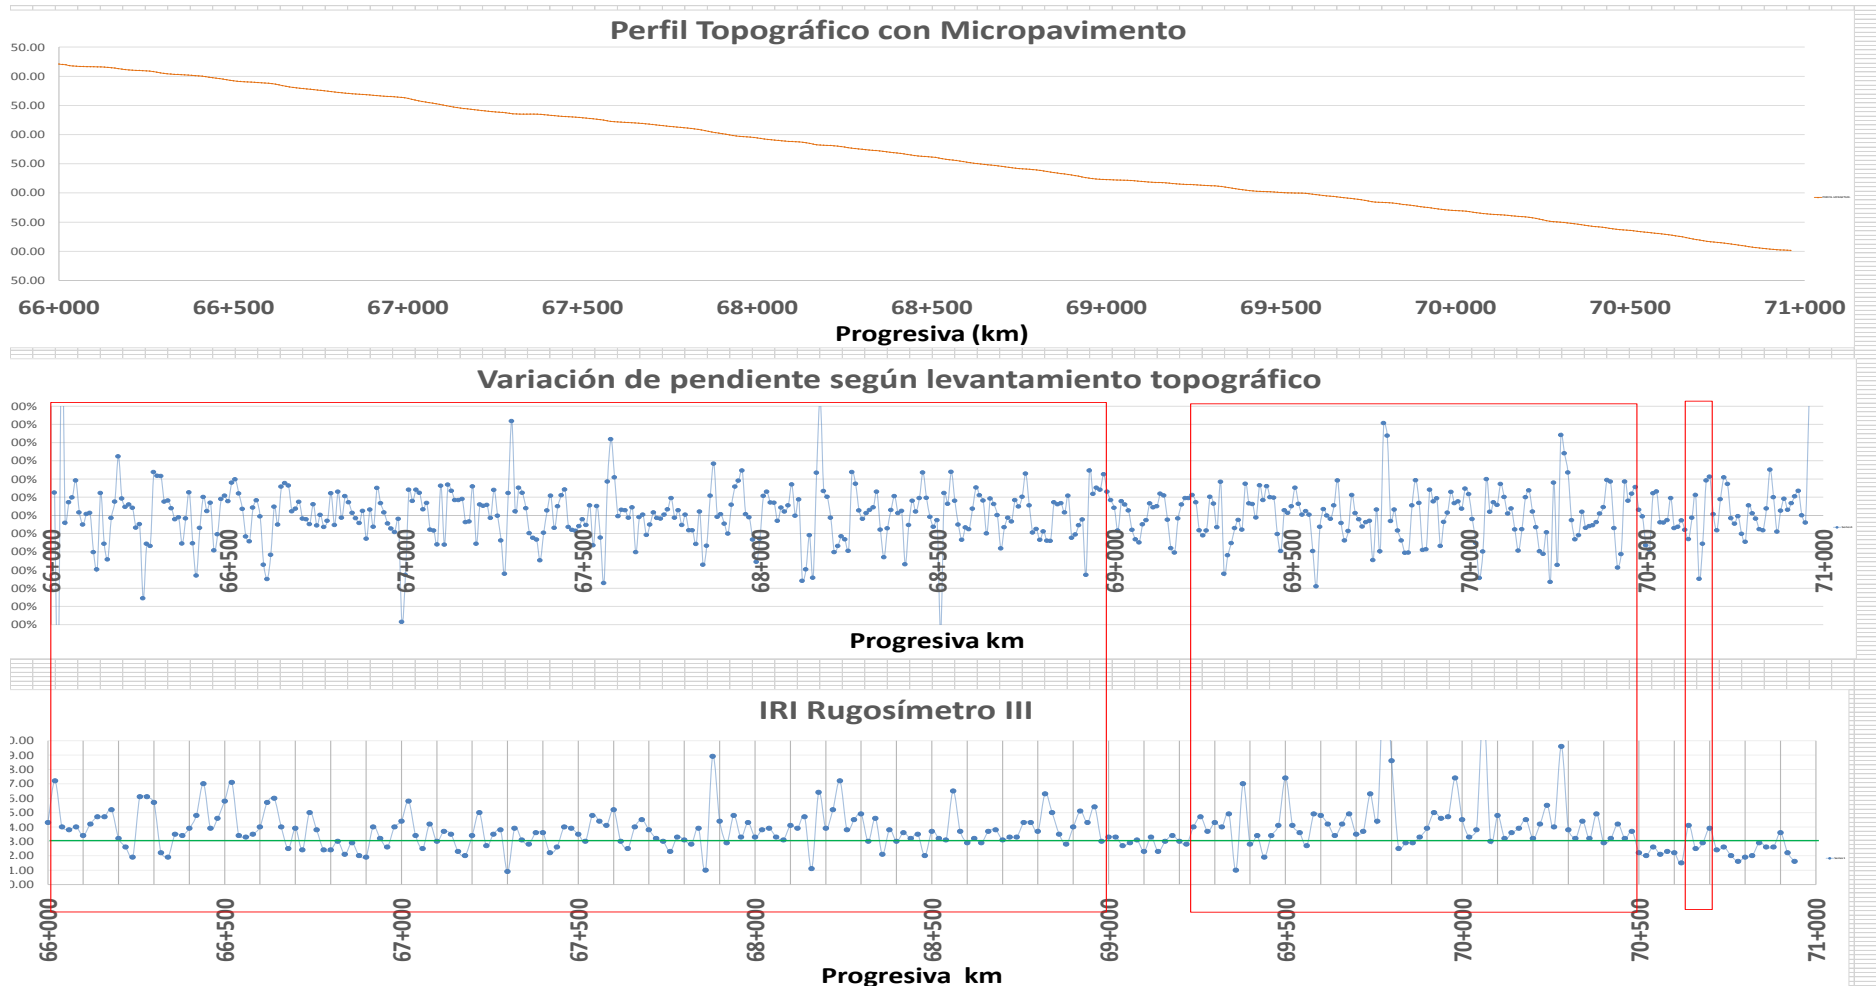

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 60+000- Km 66+000

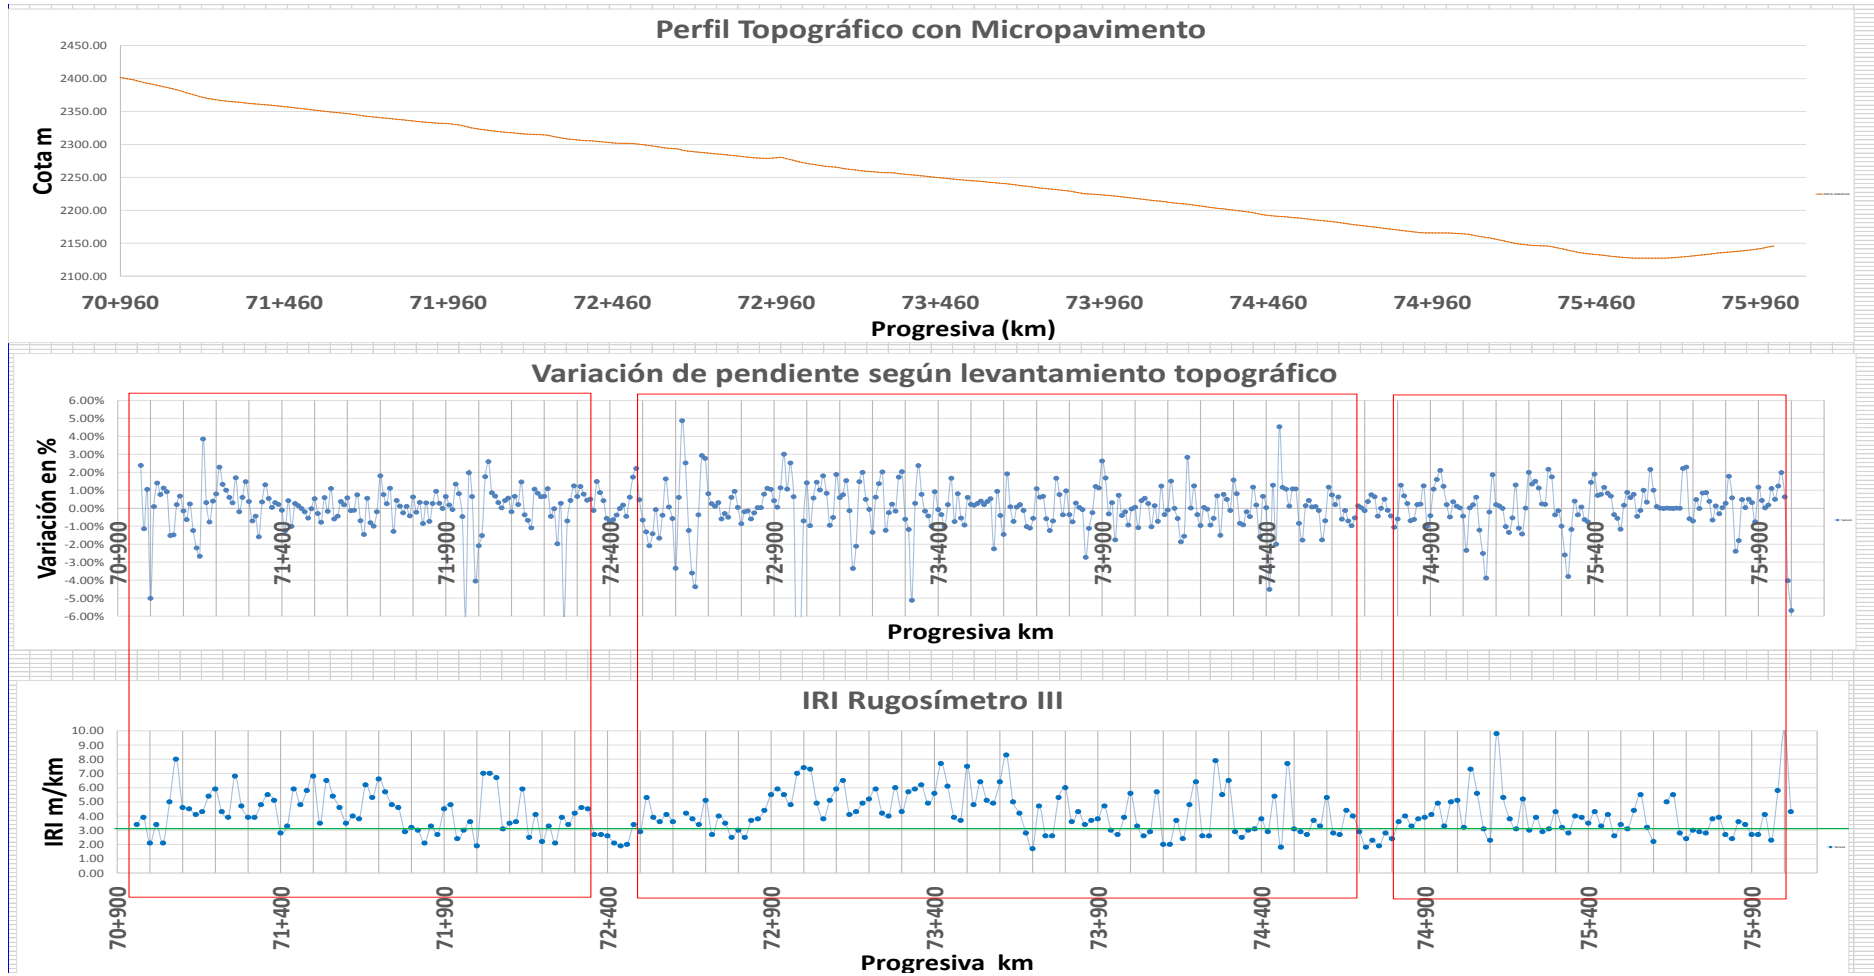

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 66+000- Km 70+960

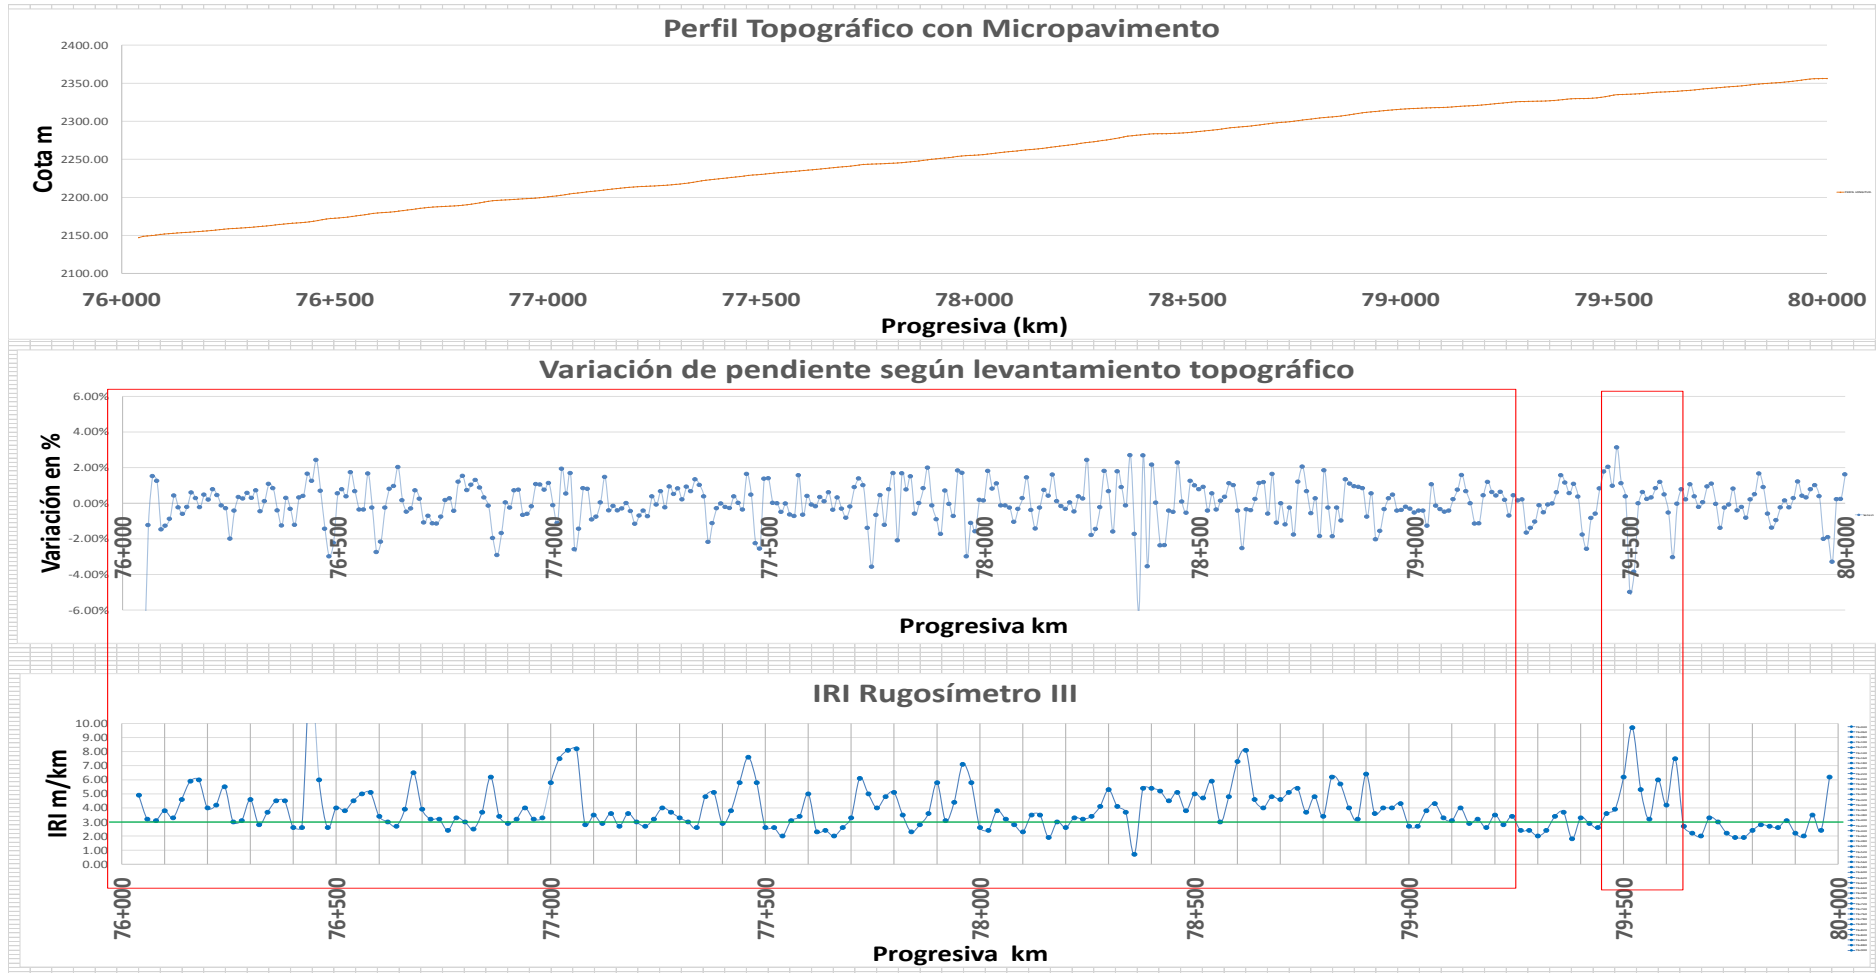

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 70+960- Km 76+040

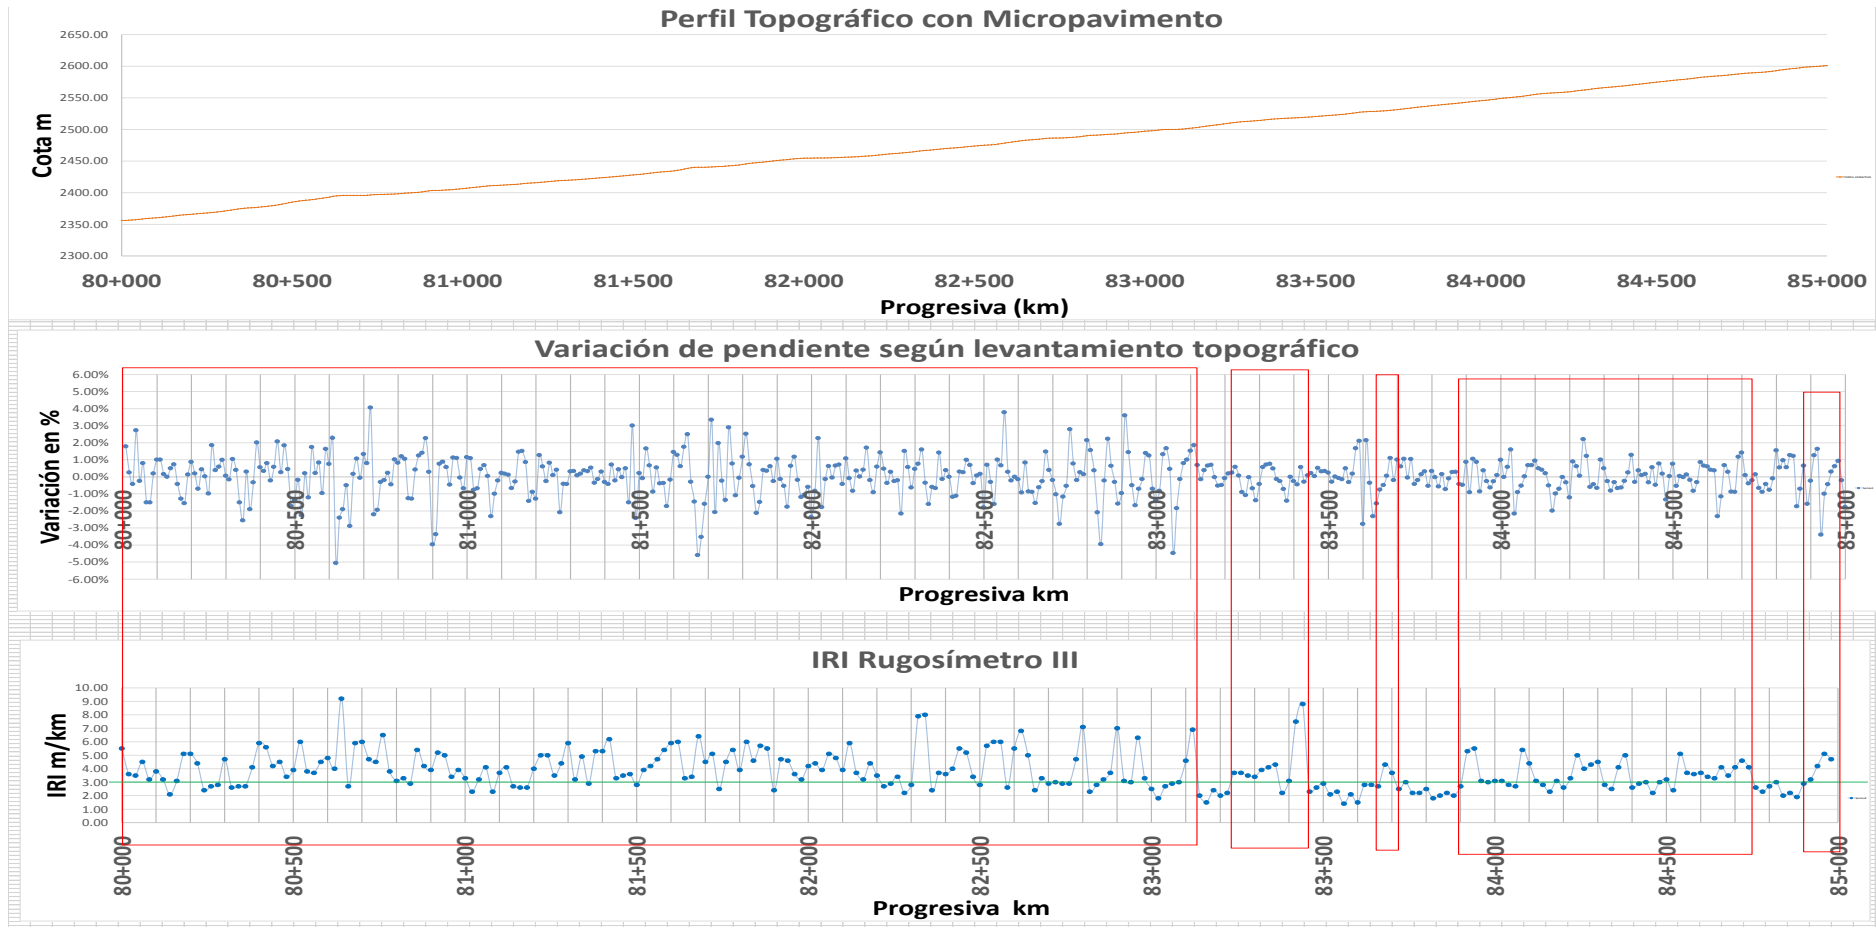

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 76+040- Km 80+000

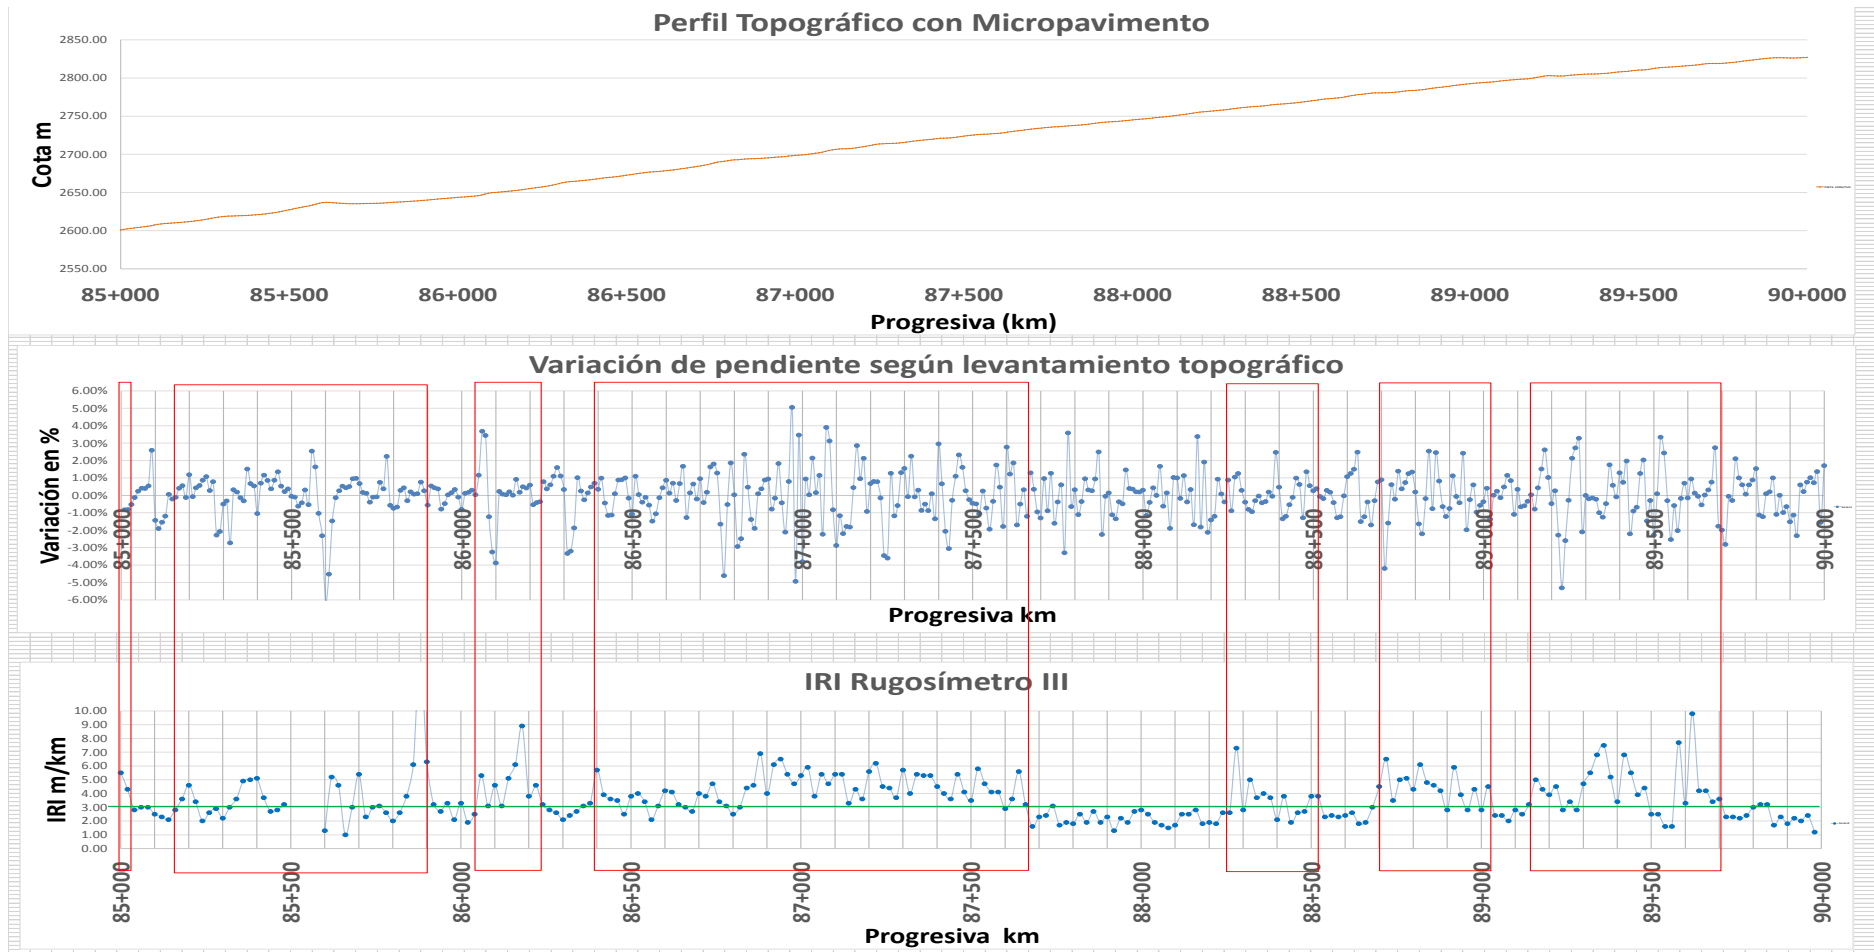

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 80+000- Km 85+000

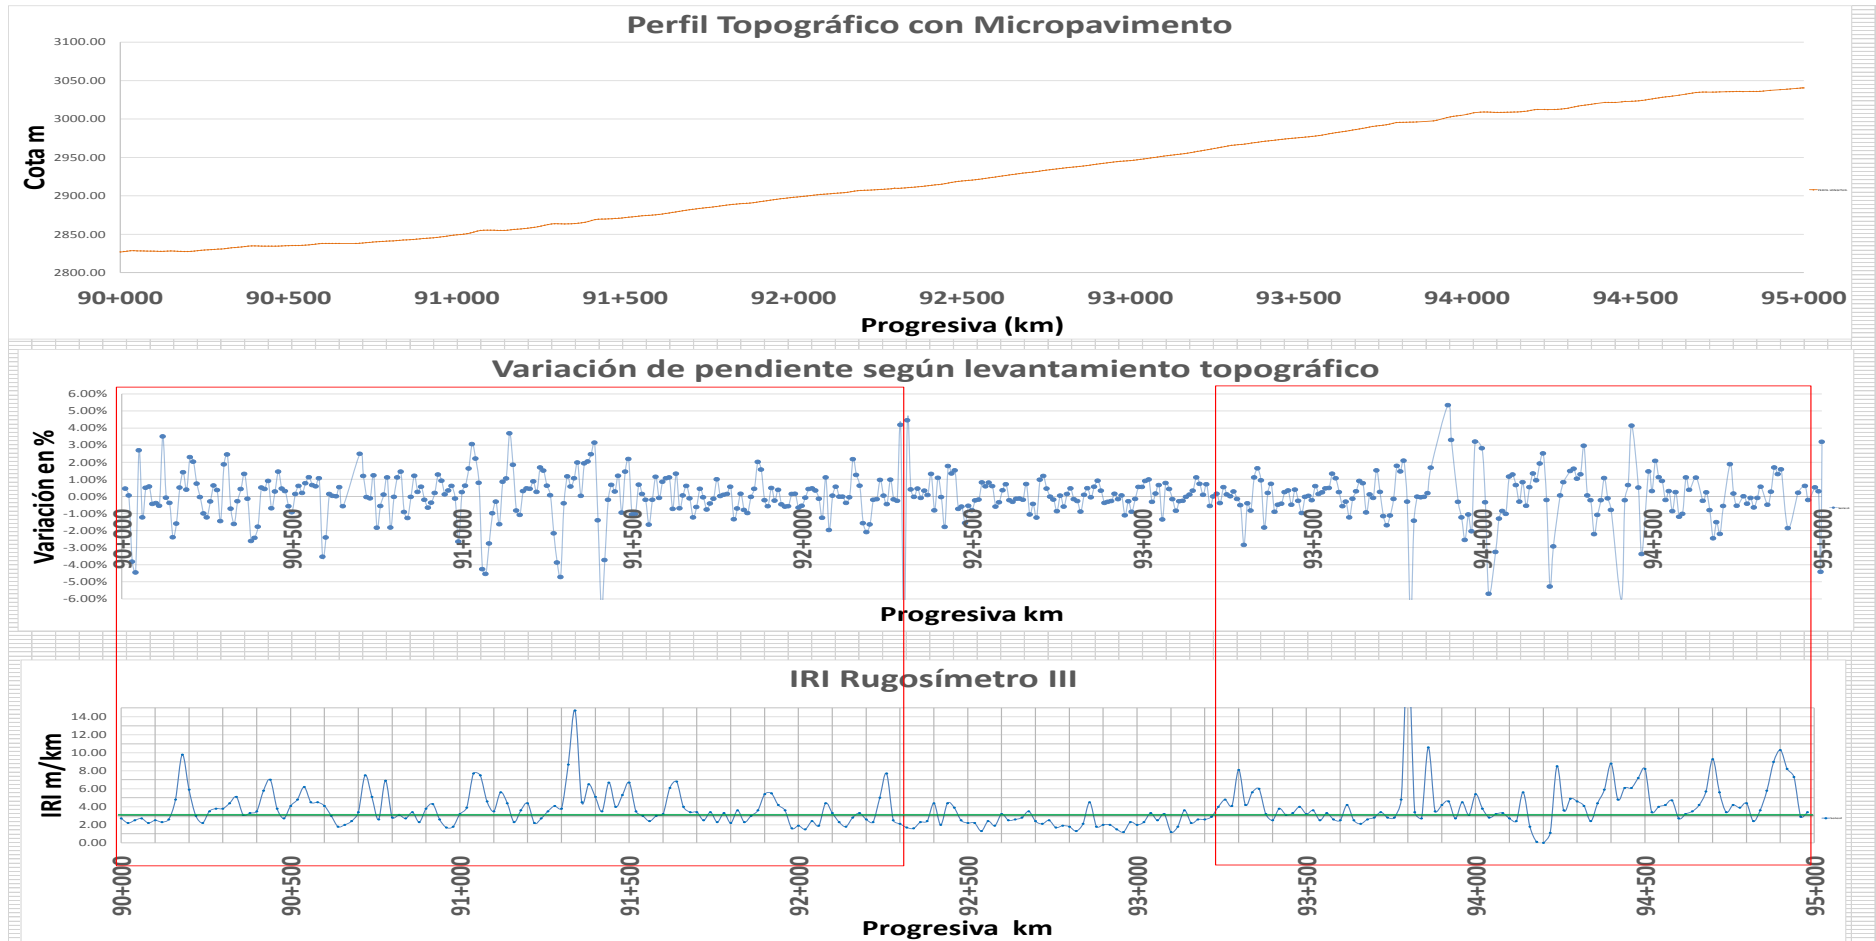

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 85+000- Km 90+000

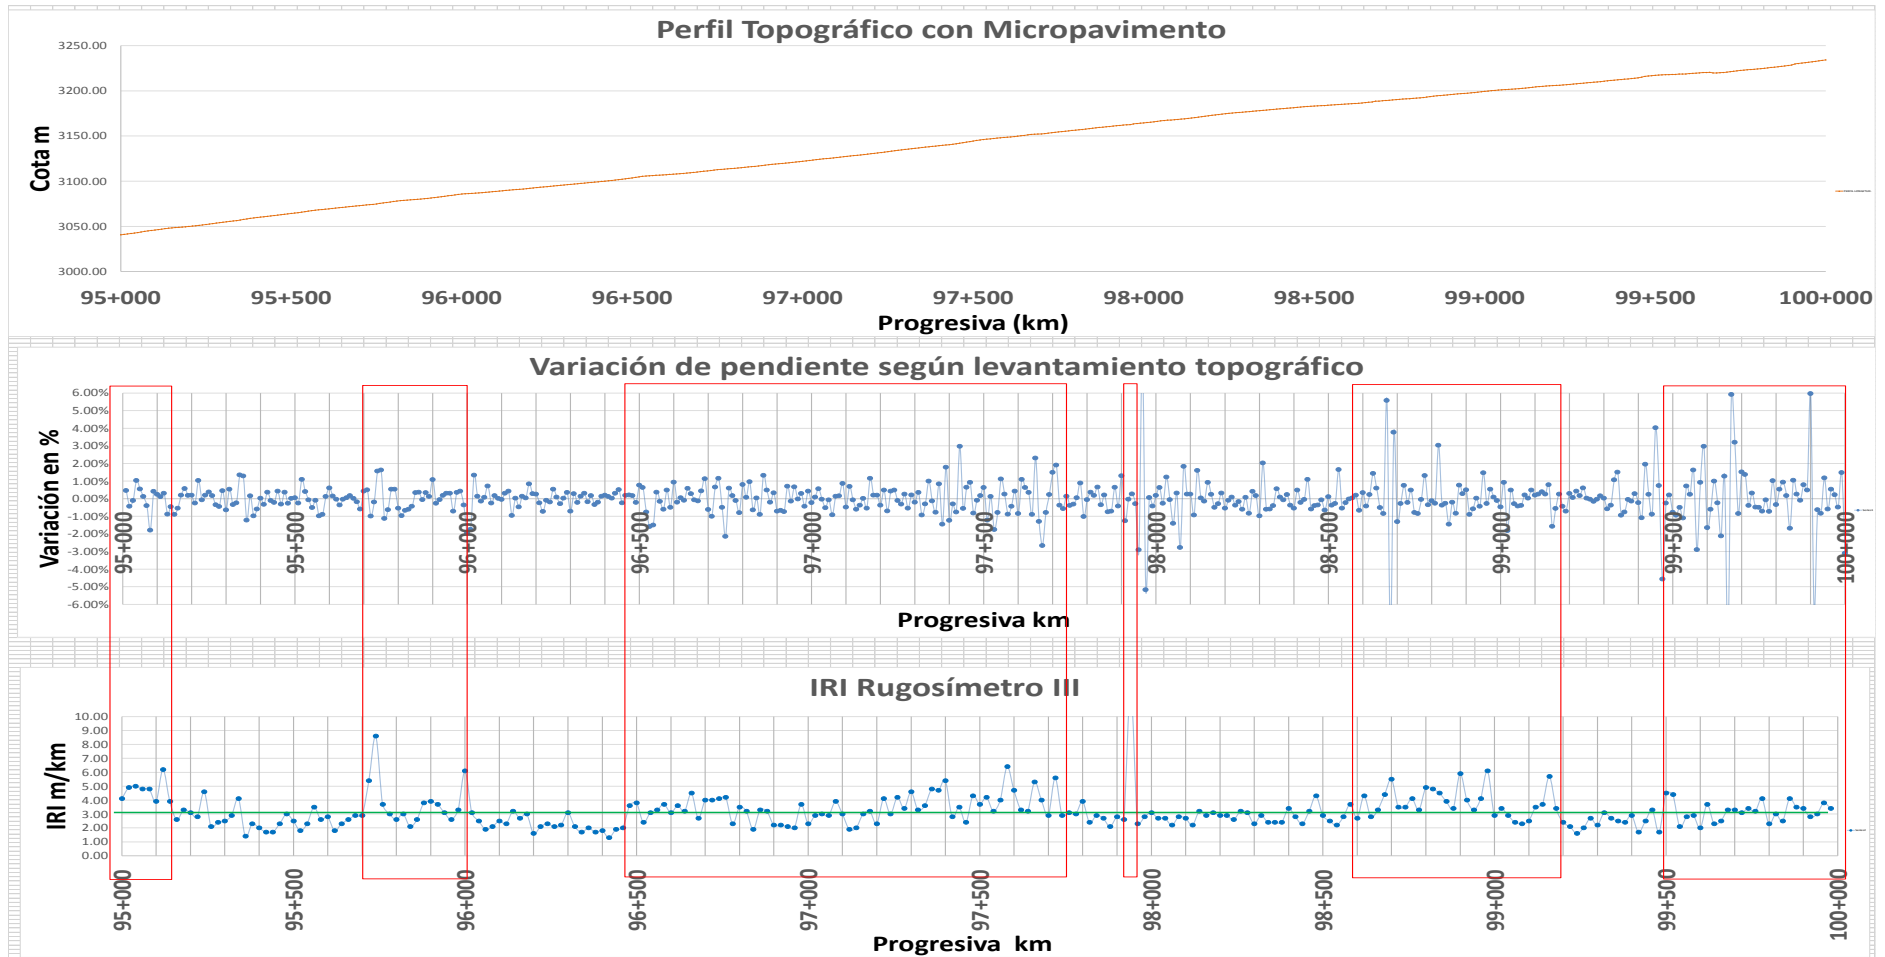

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 90+000- Km 95+000

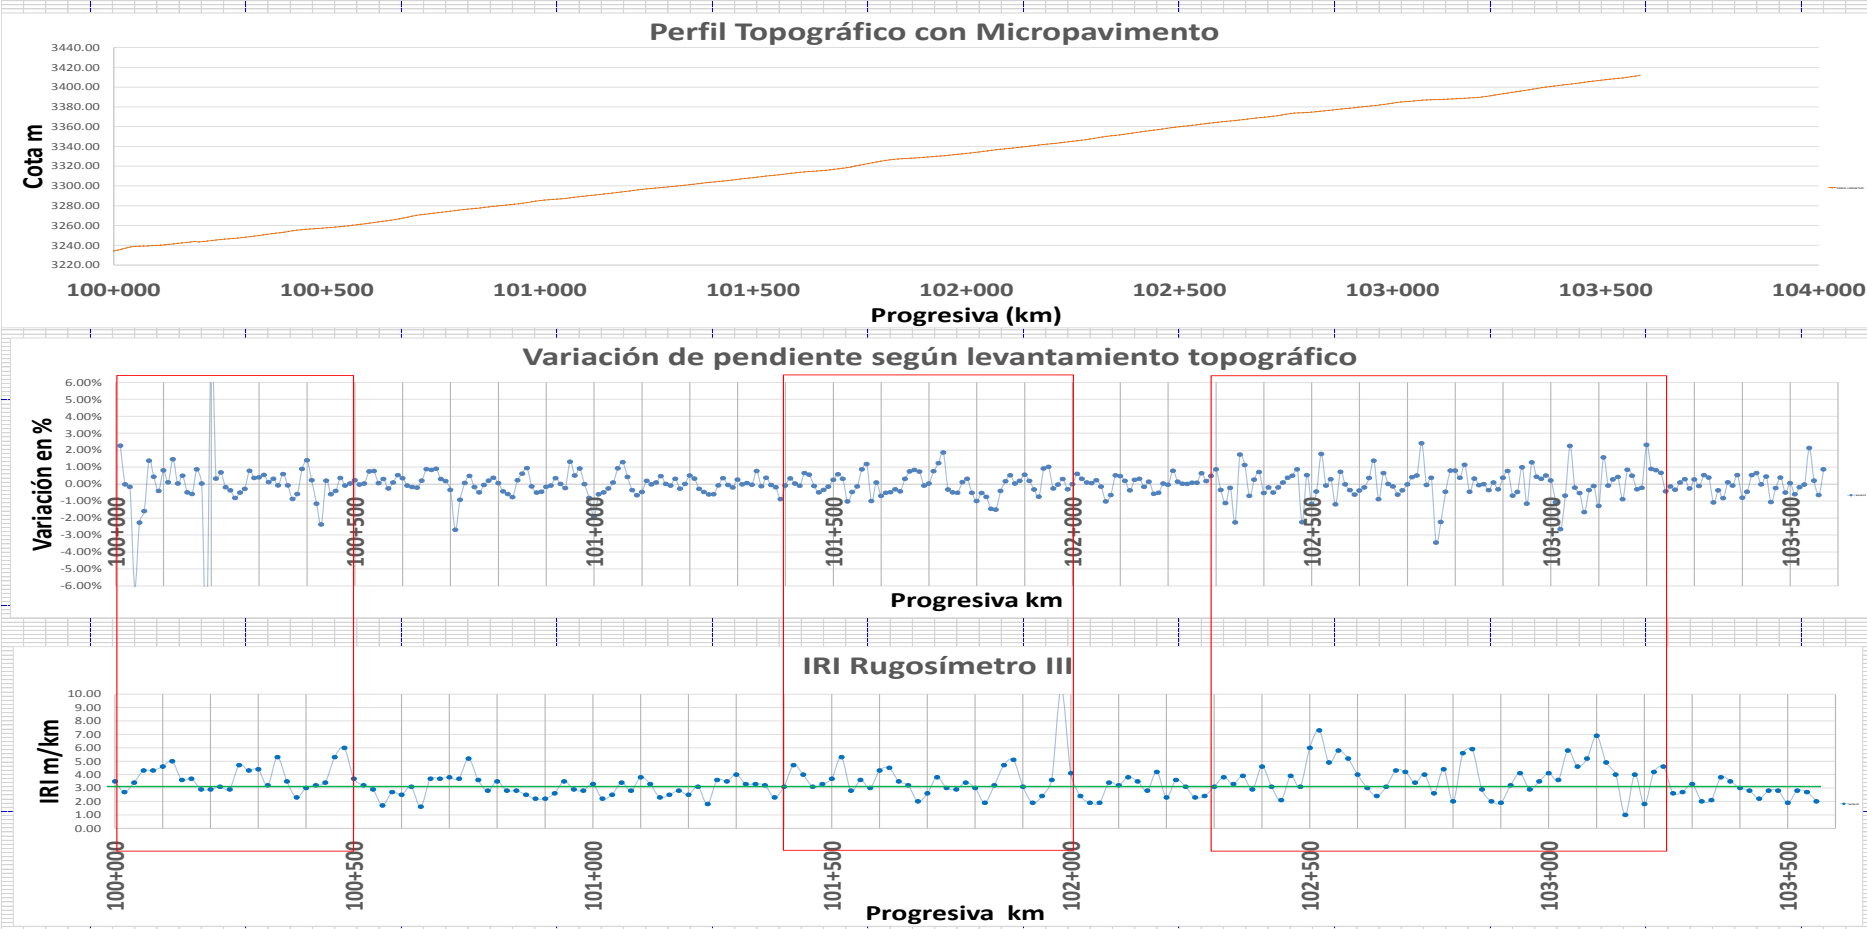

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 95+000-Km100+000

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 100+000-Km103+580

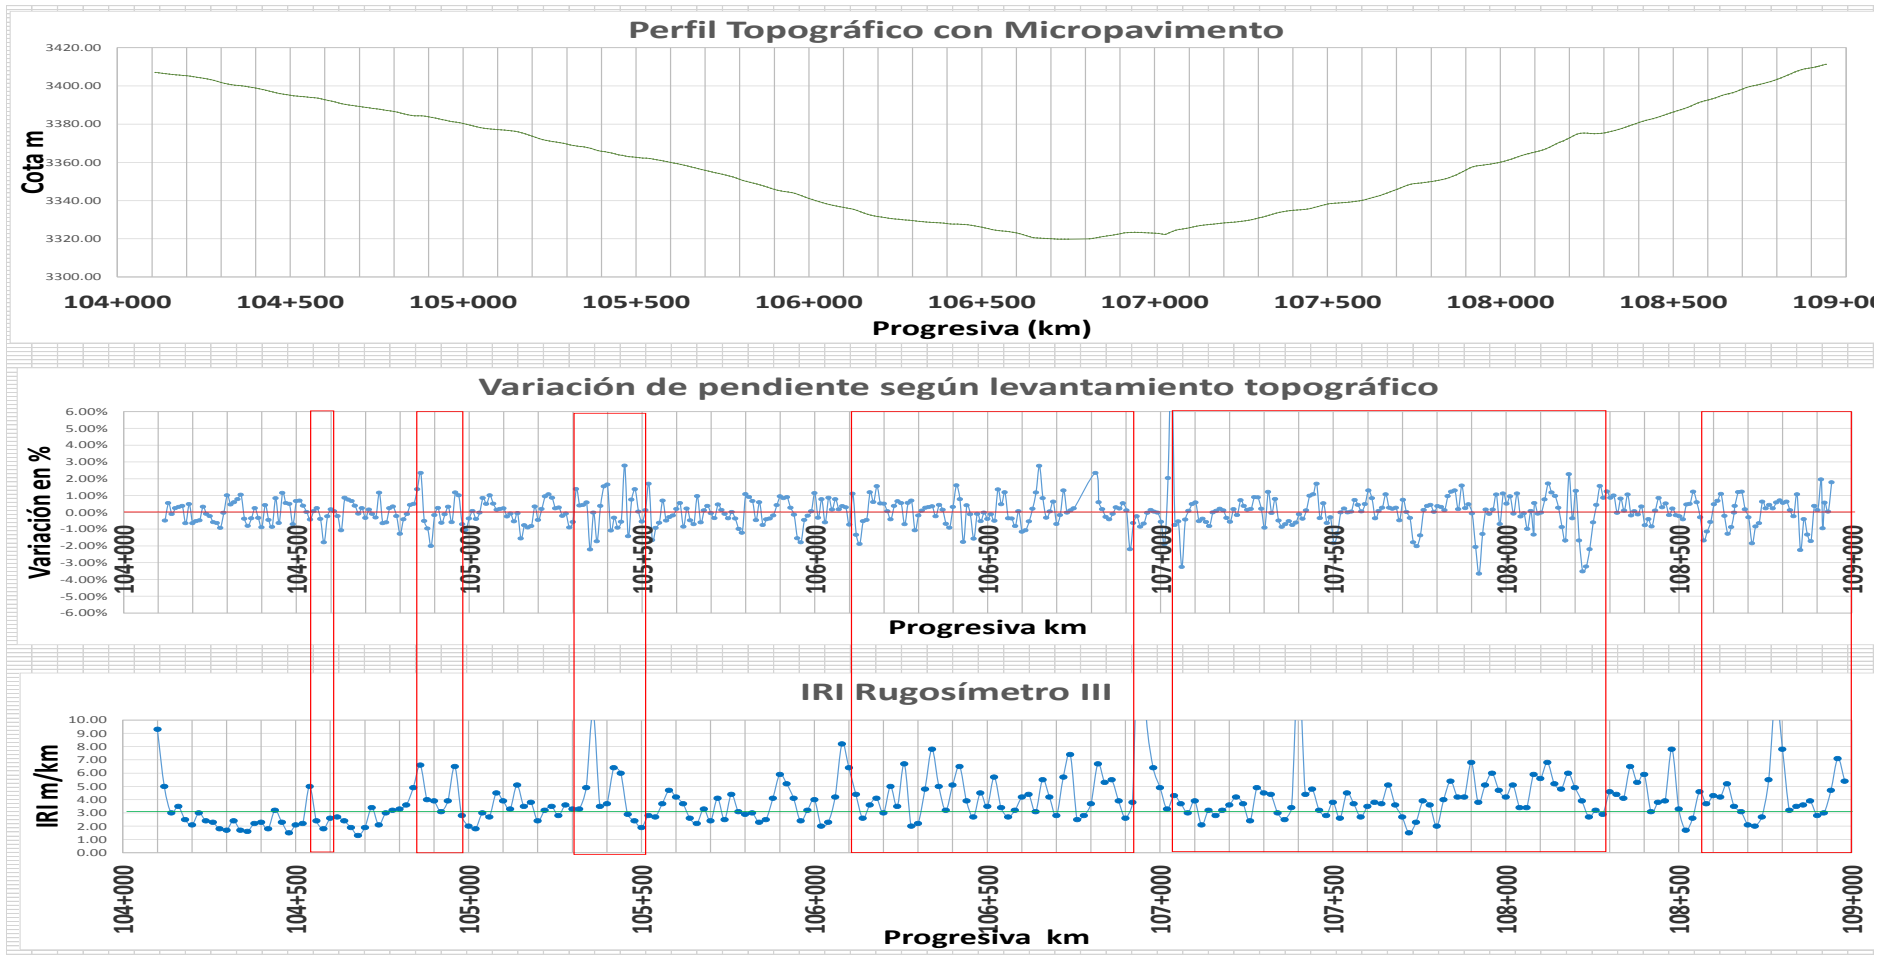

Fuente: Elaboro por el equipo de trabajo

Tramo III

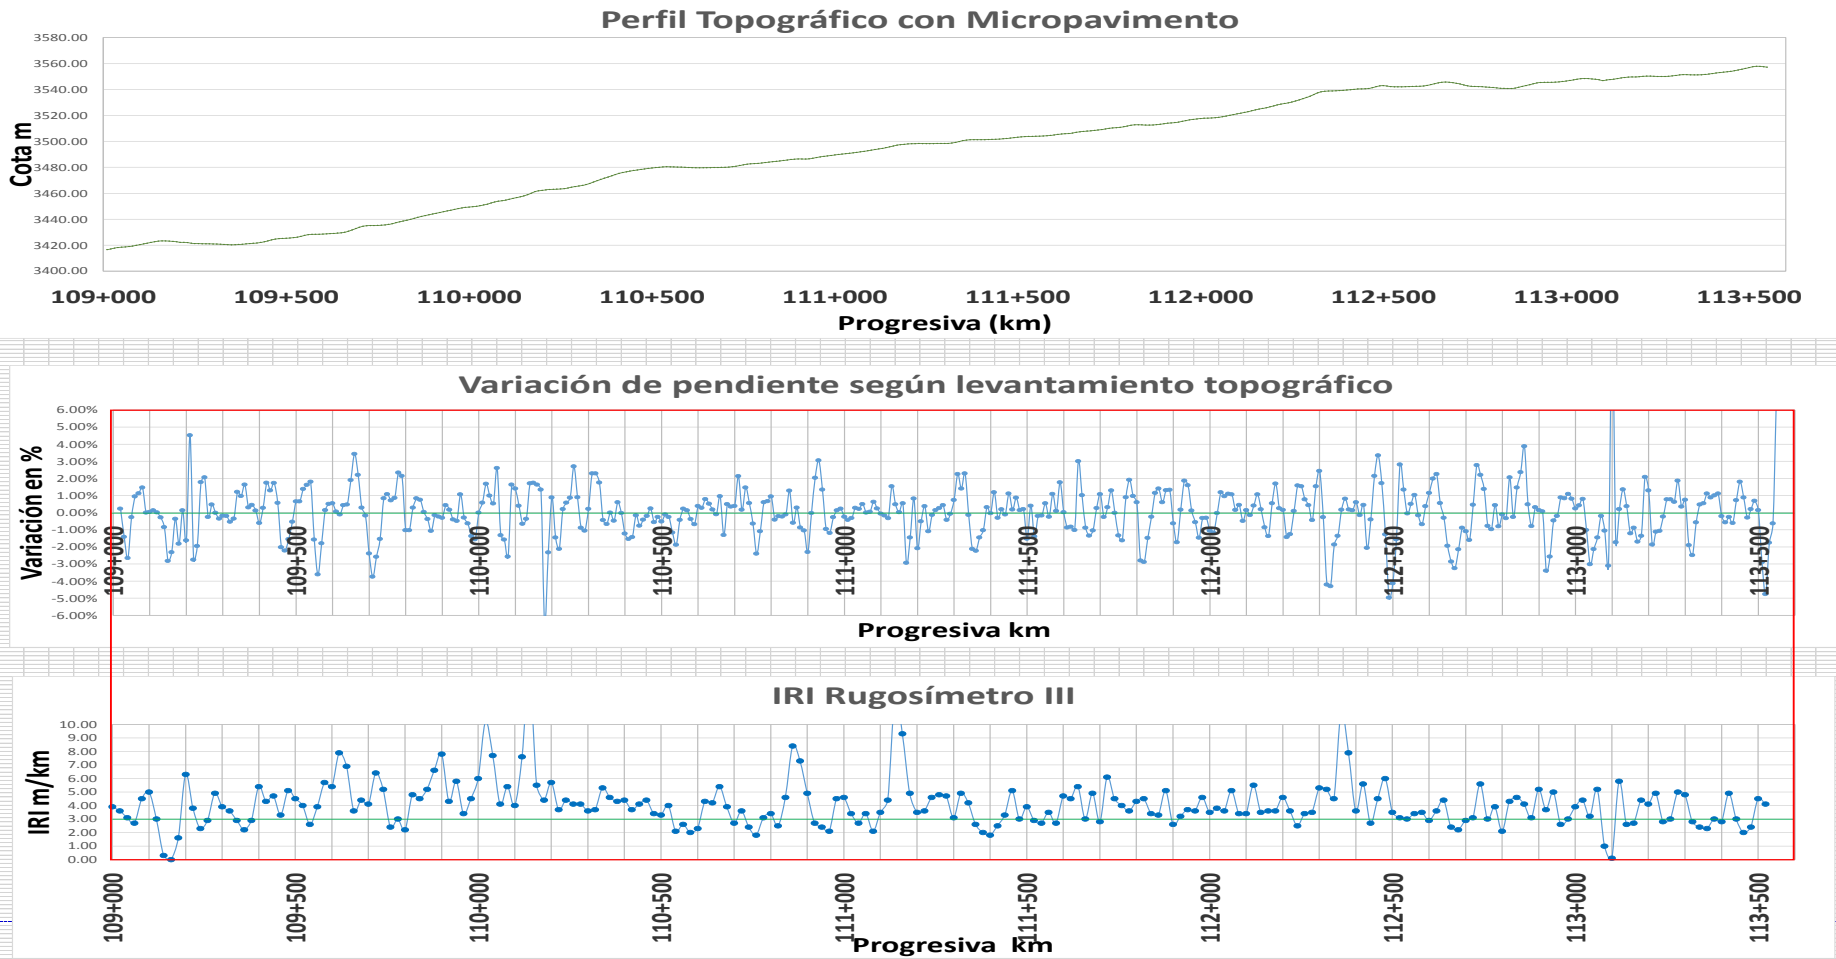

Cotabambas – Puente Ichuray

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 104+110-Km109+000

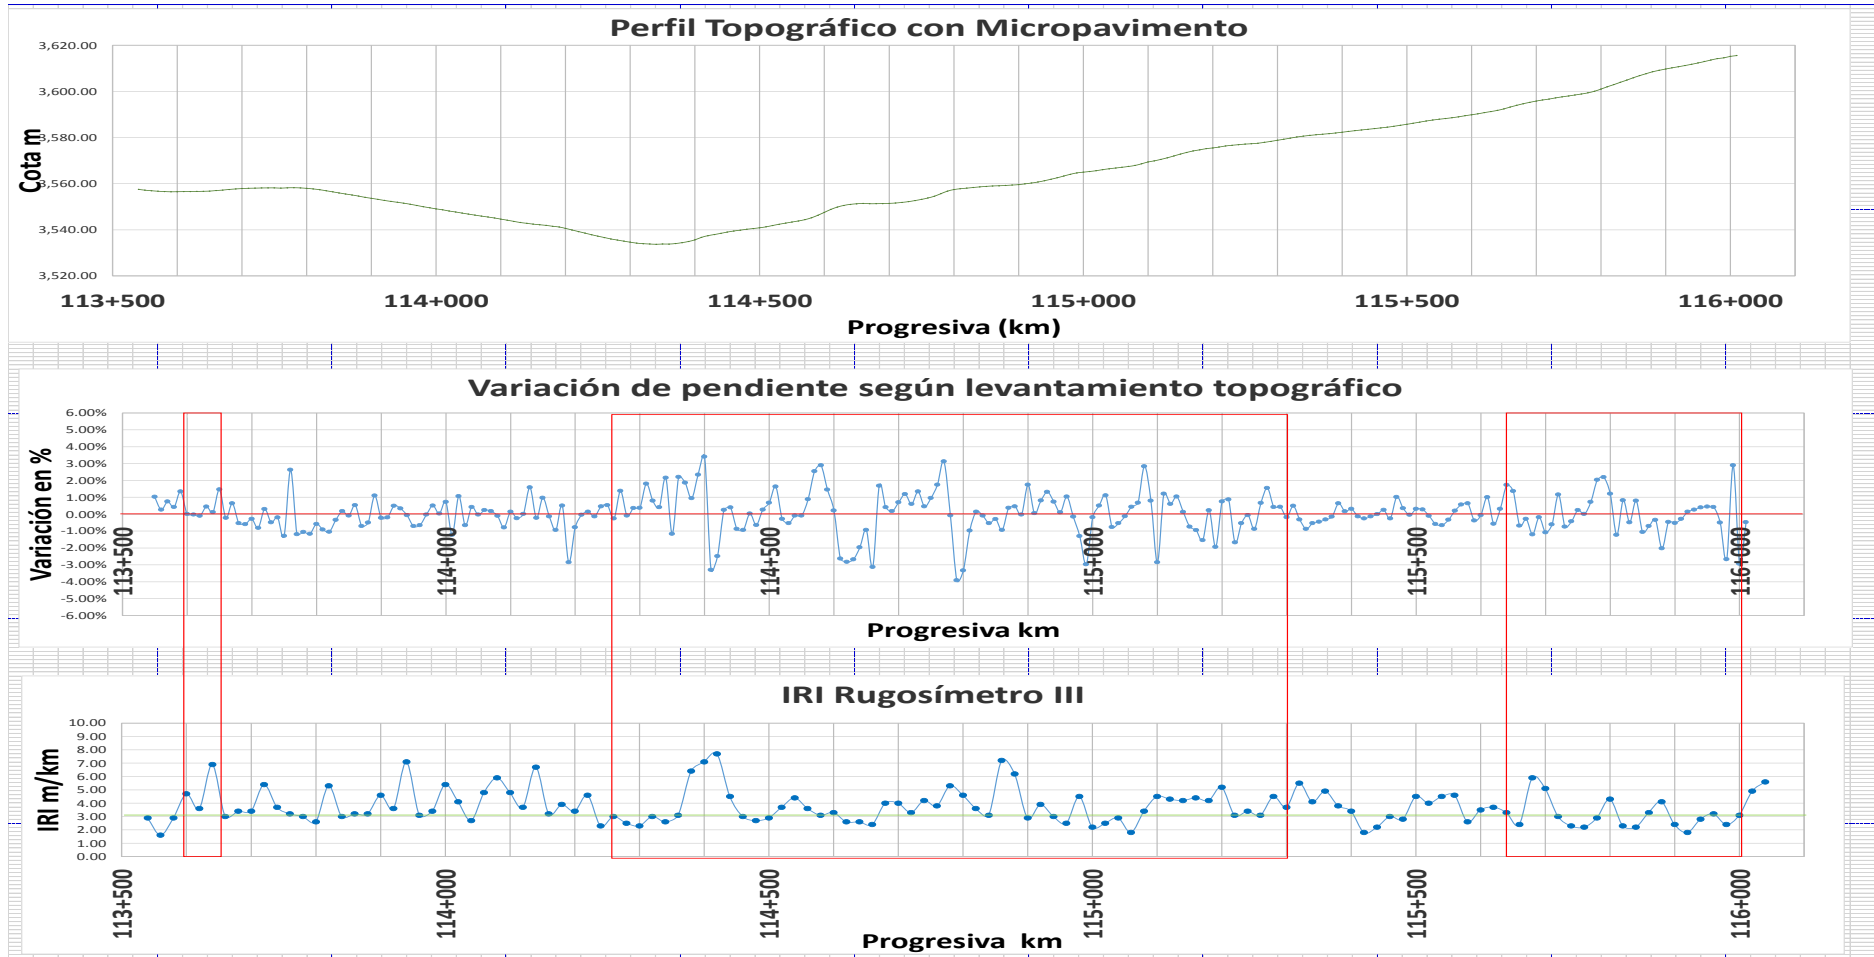

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 109+000-Km113+540

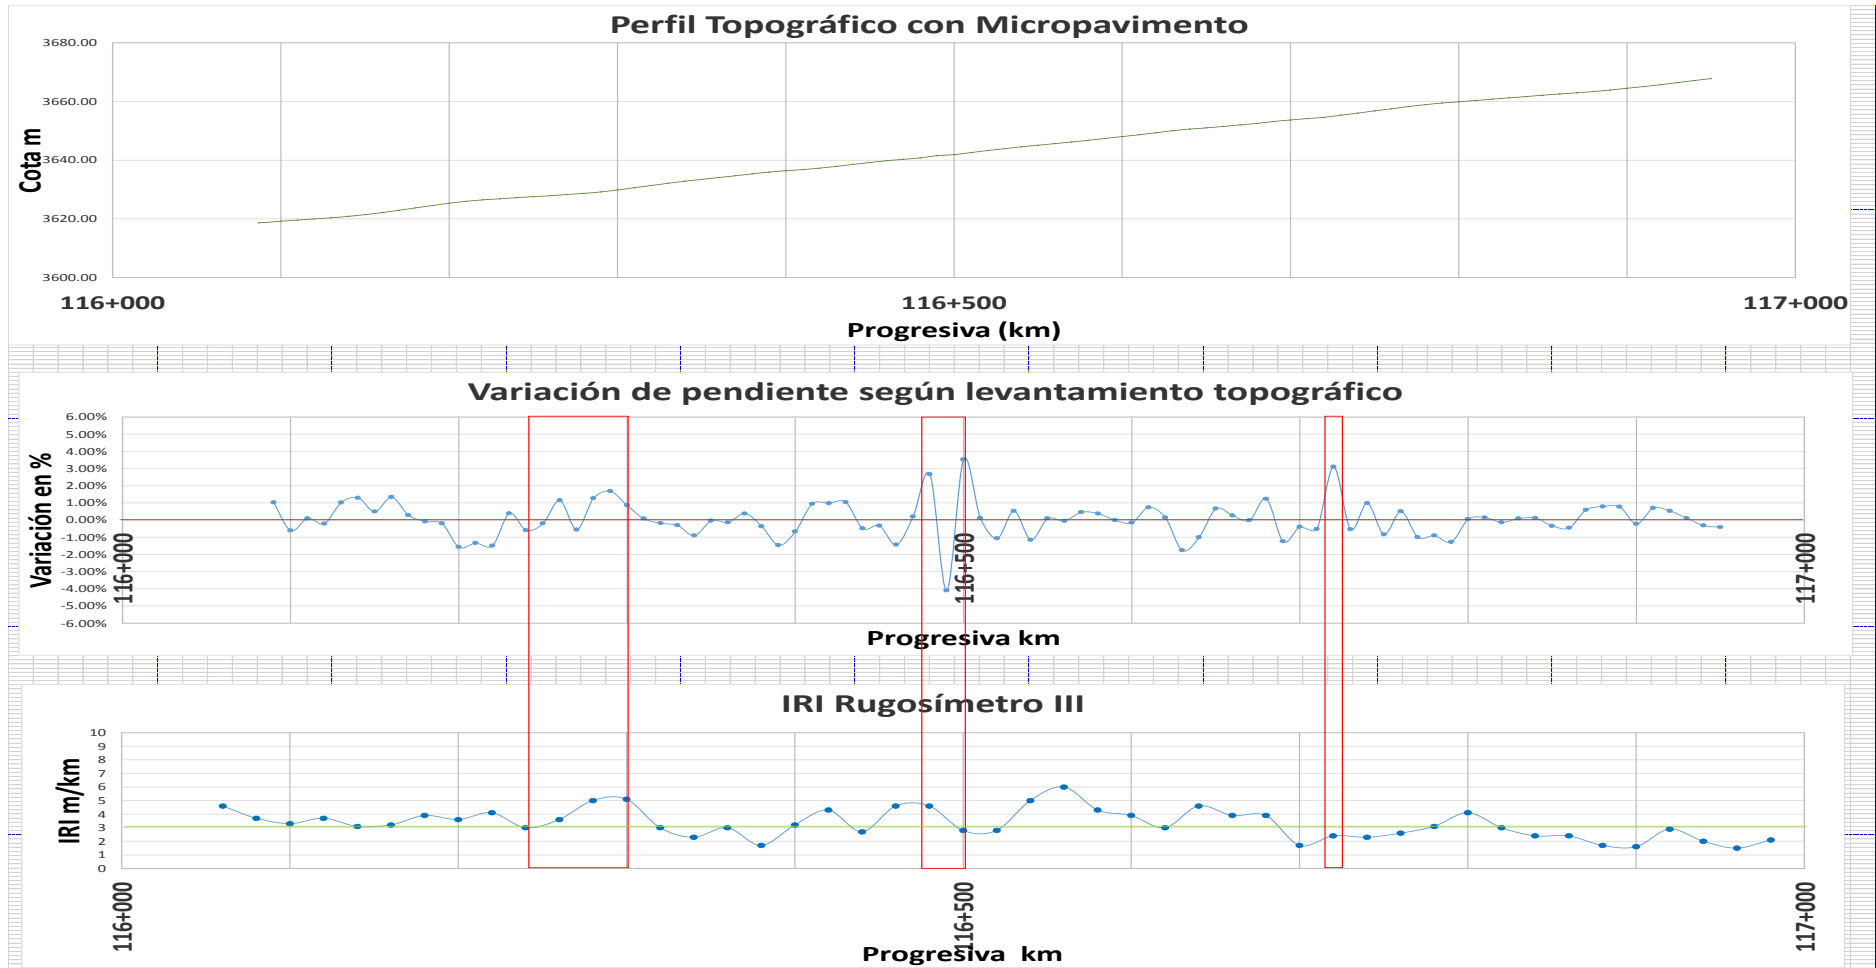

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 113+540 Km116+060

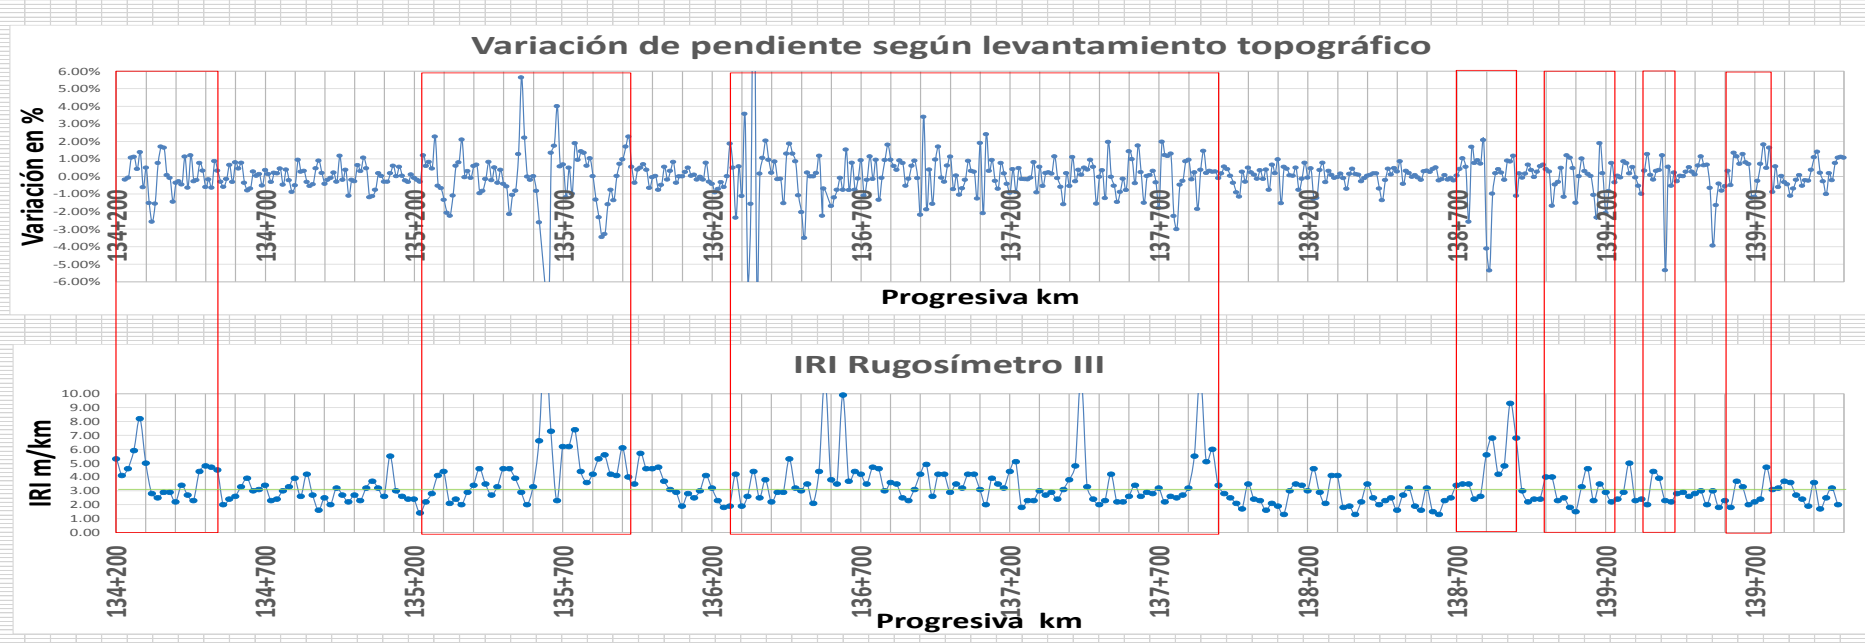

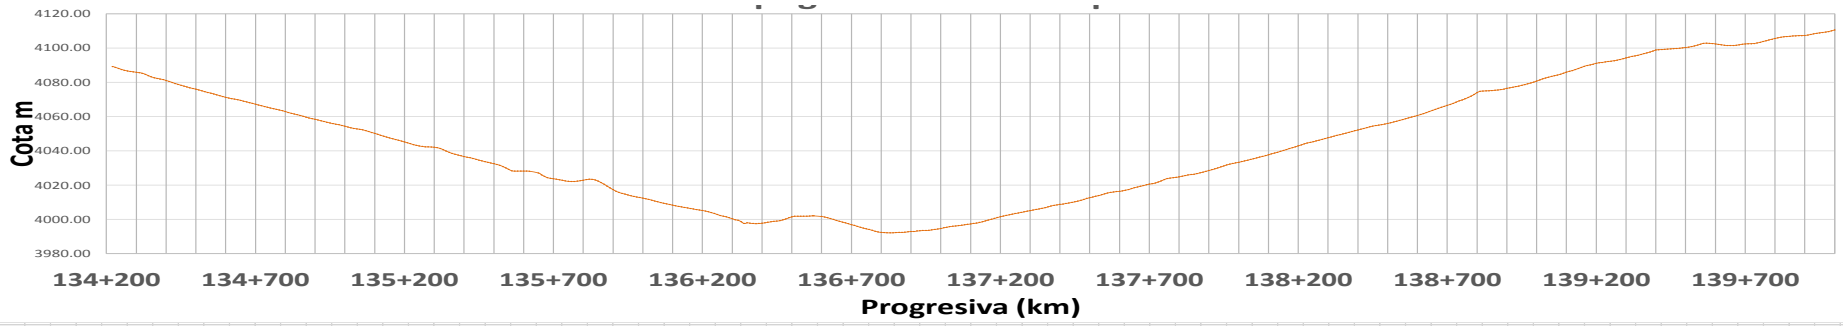

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 116+080 Km117+000

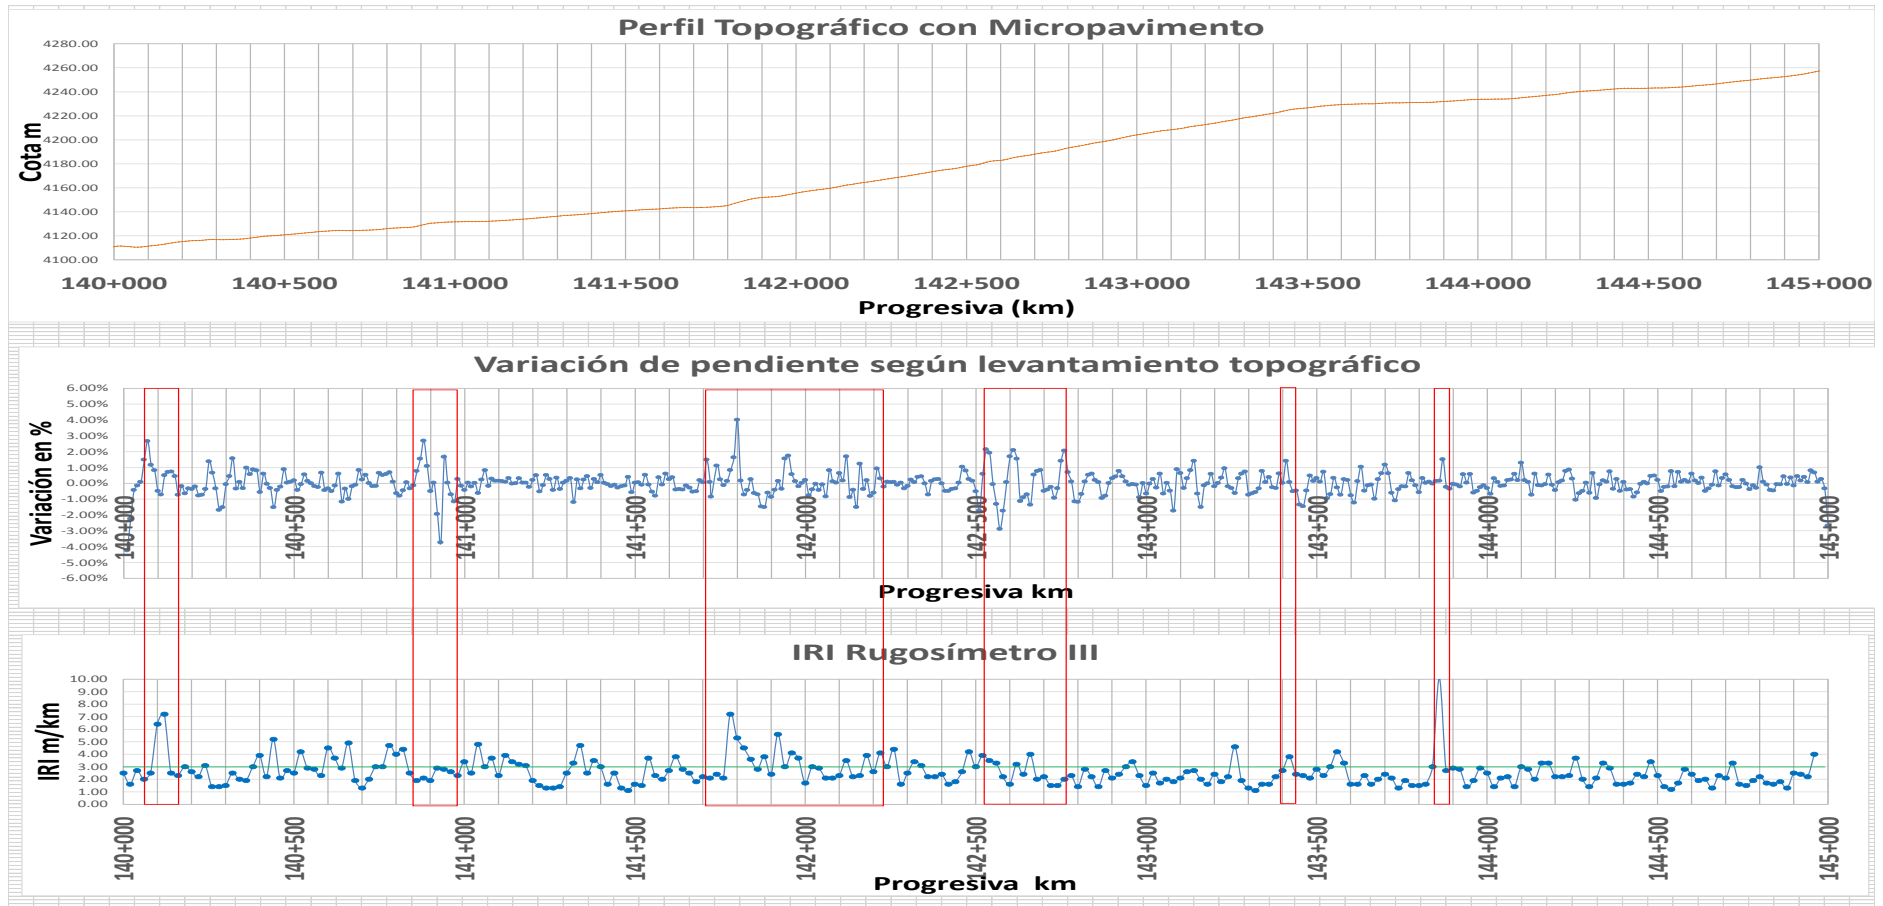

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 134+220-Km140+000

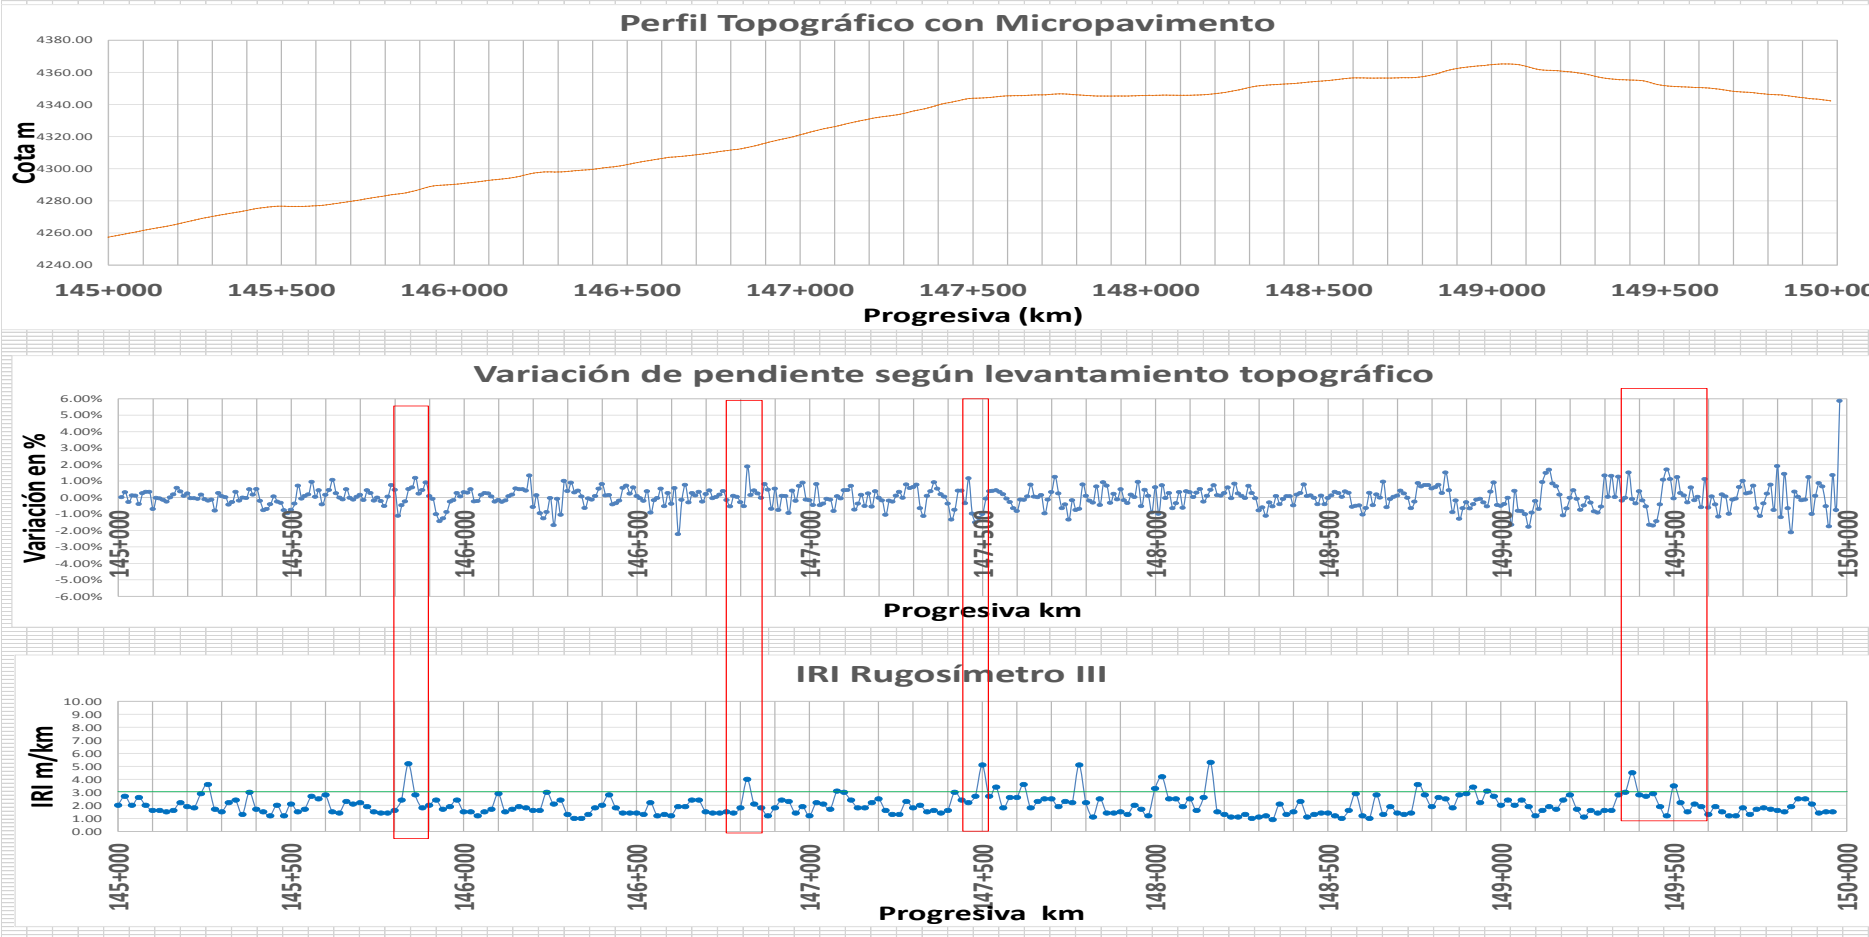

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 140+000-Km145+000

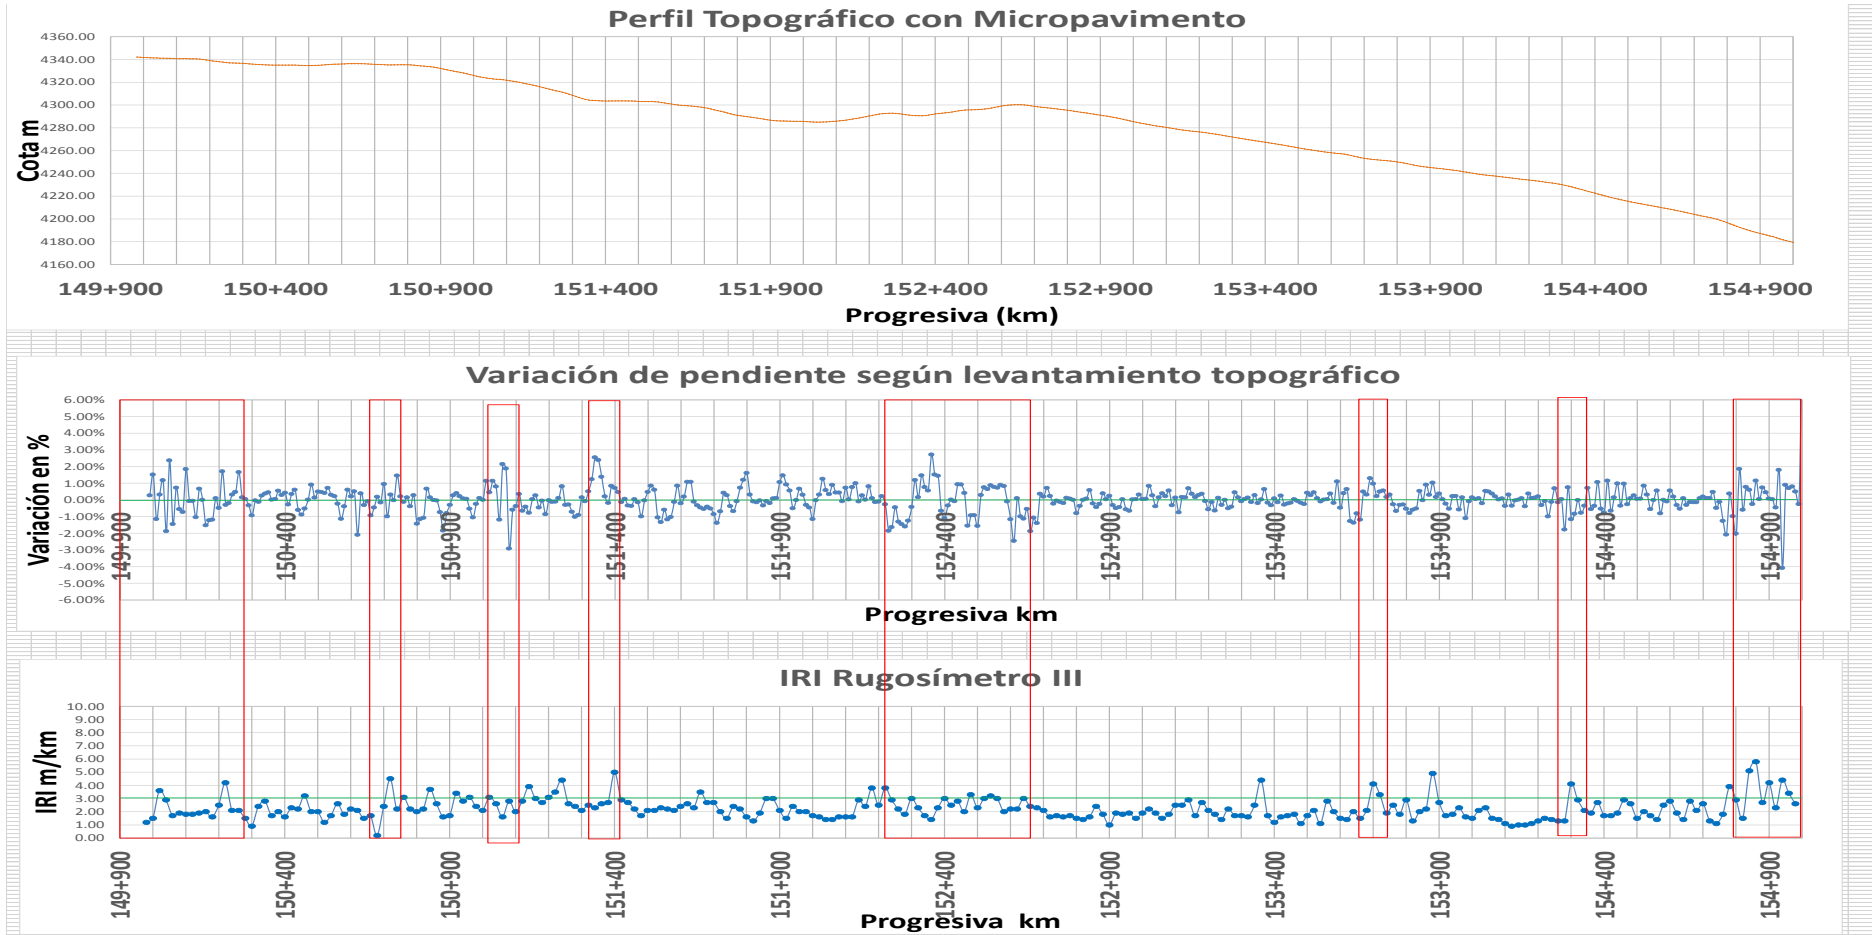

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 145+000-Km149+980

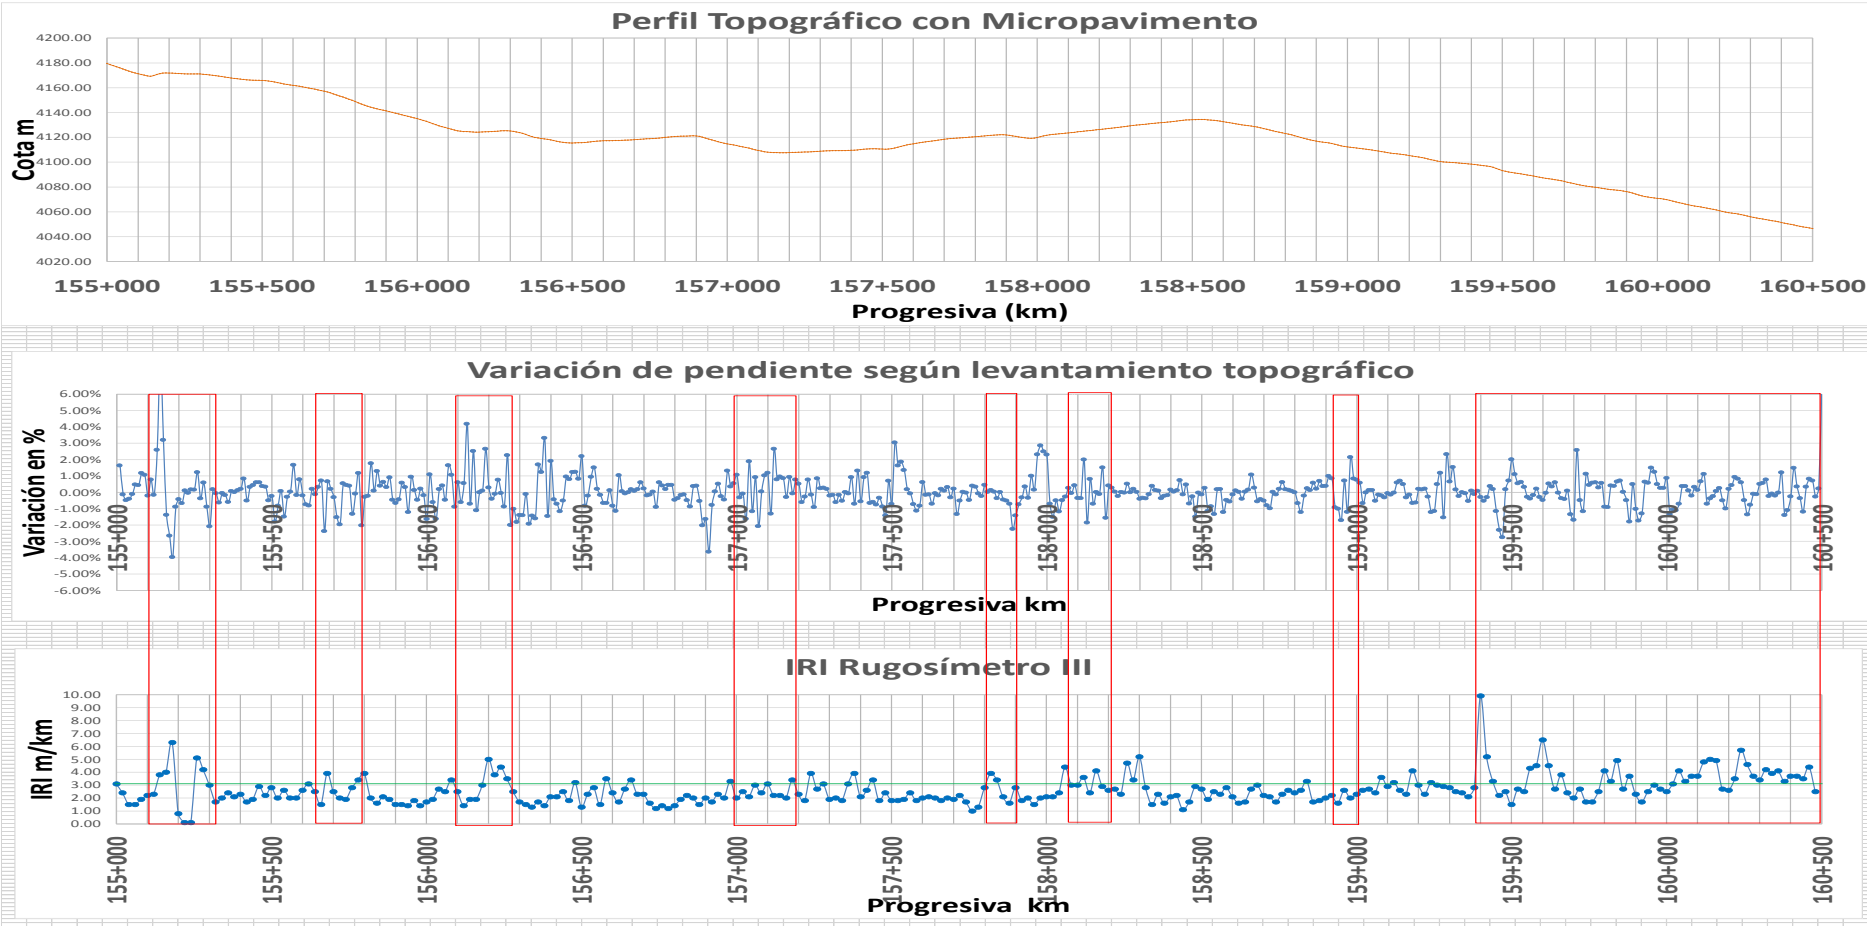

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 149+980-Km155+000

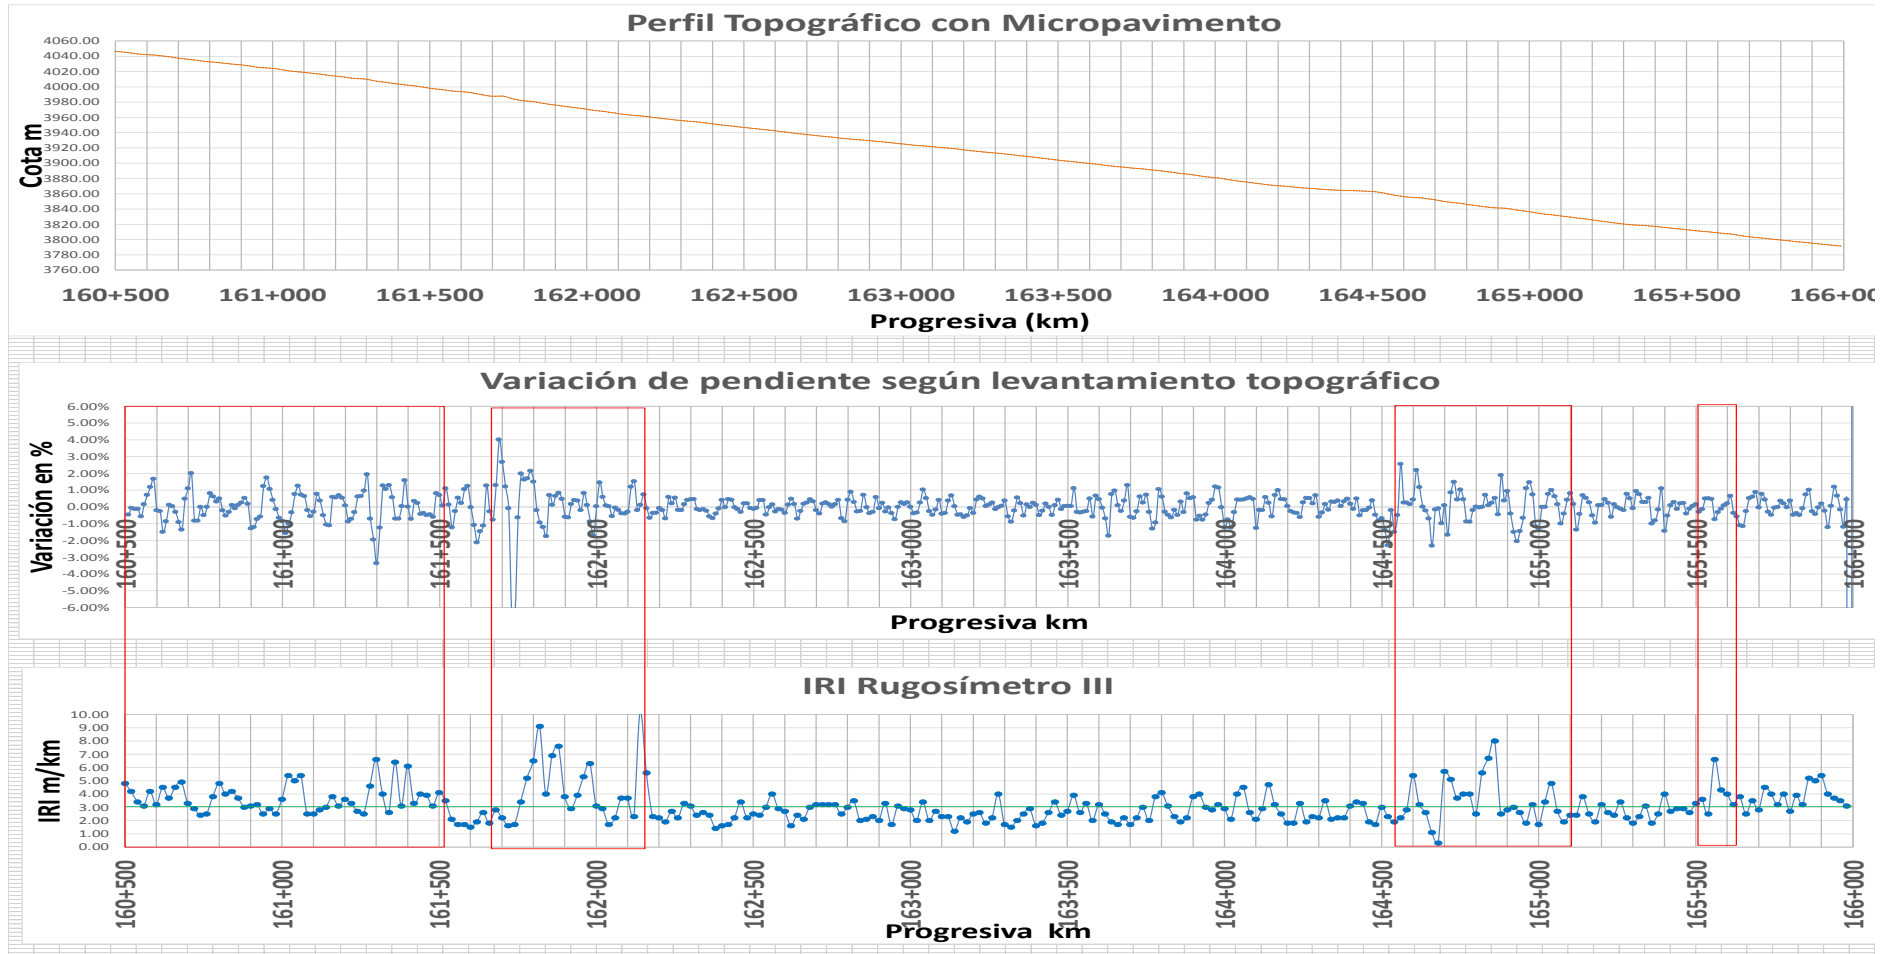

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 155+000-Km160+500

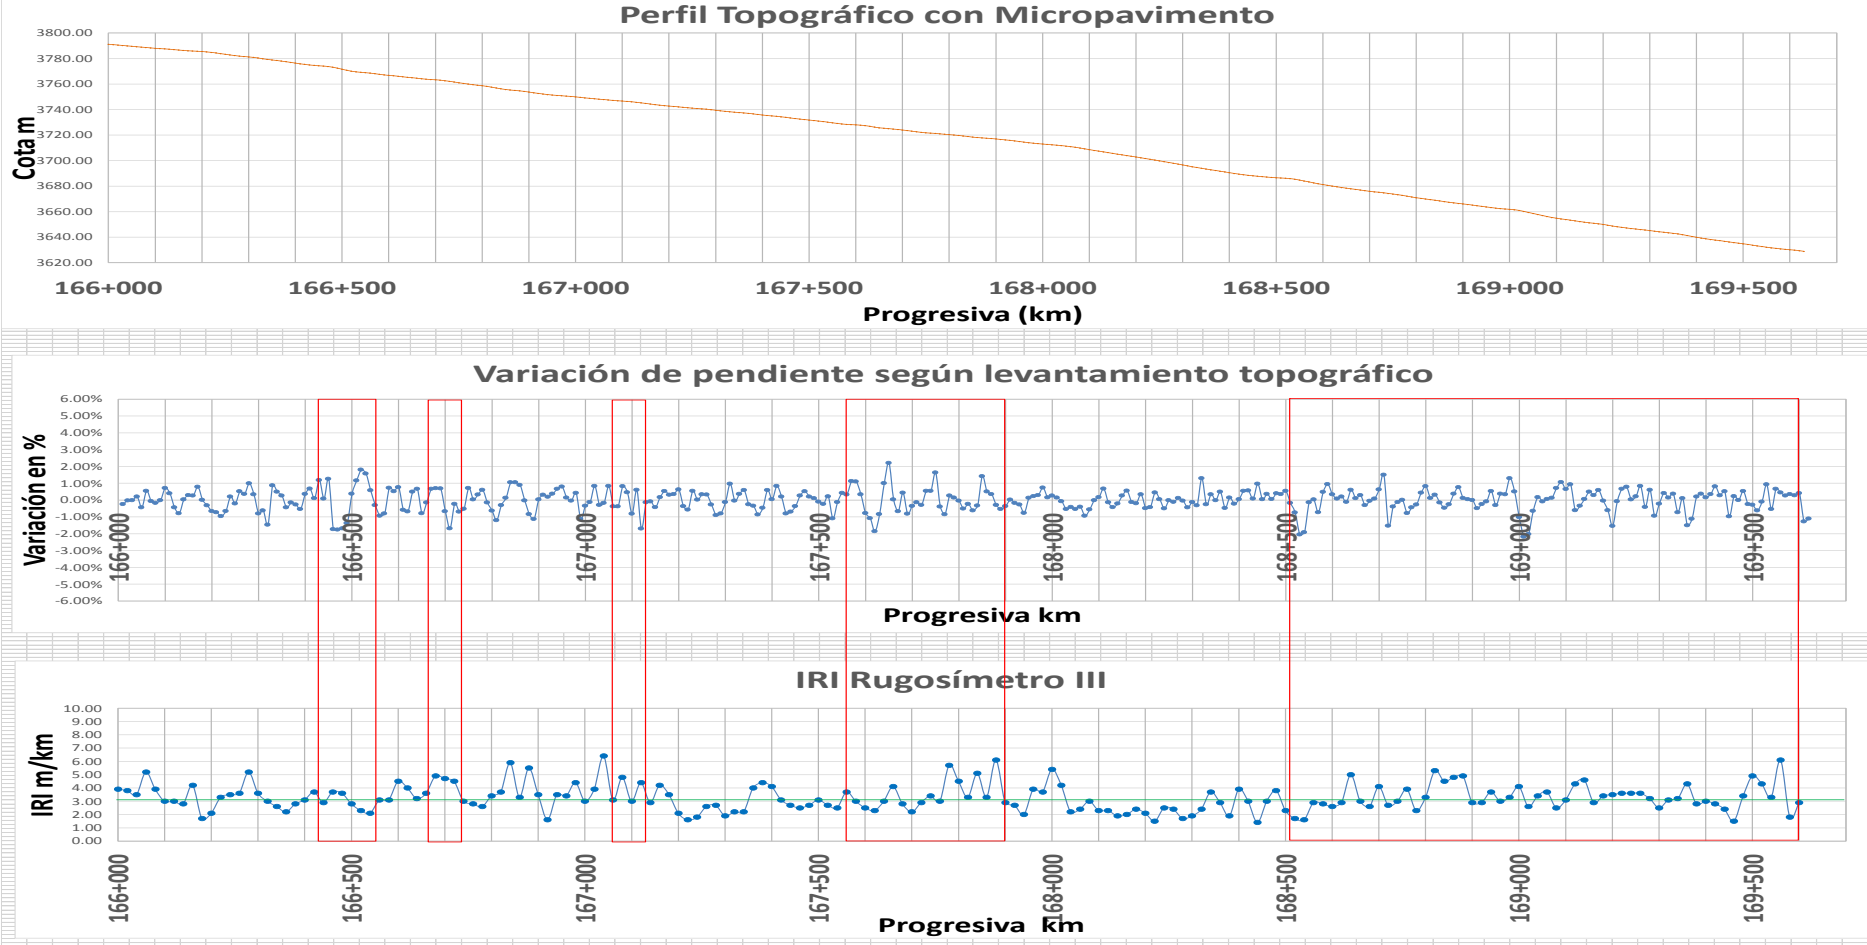

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 160+500-Km166+000

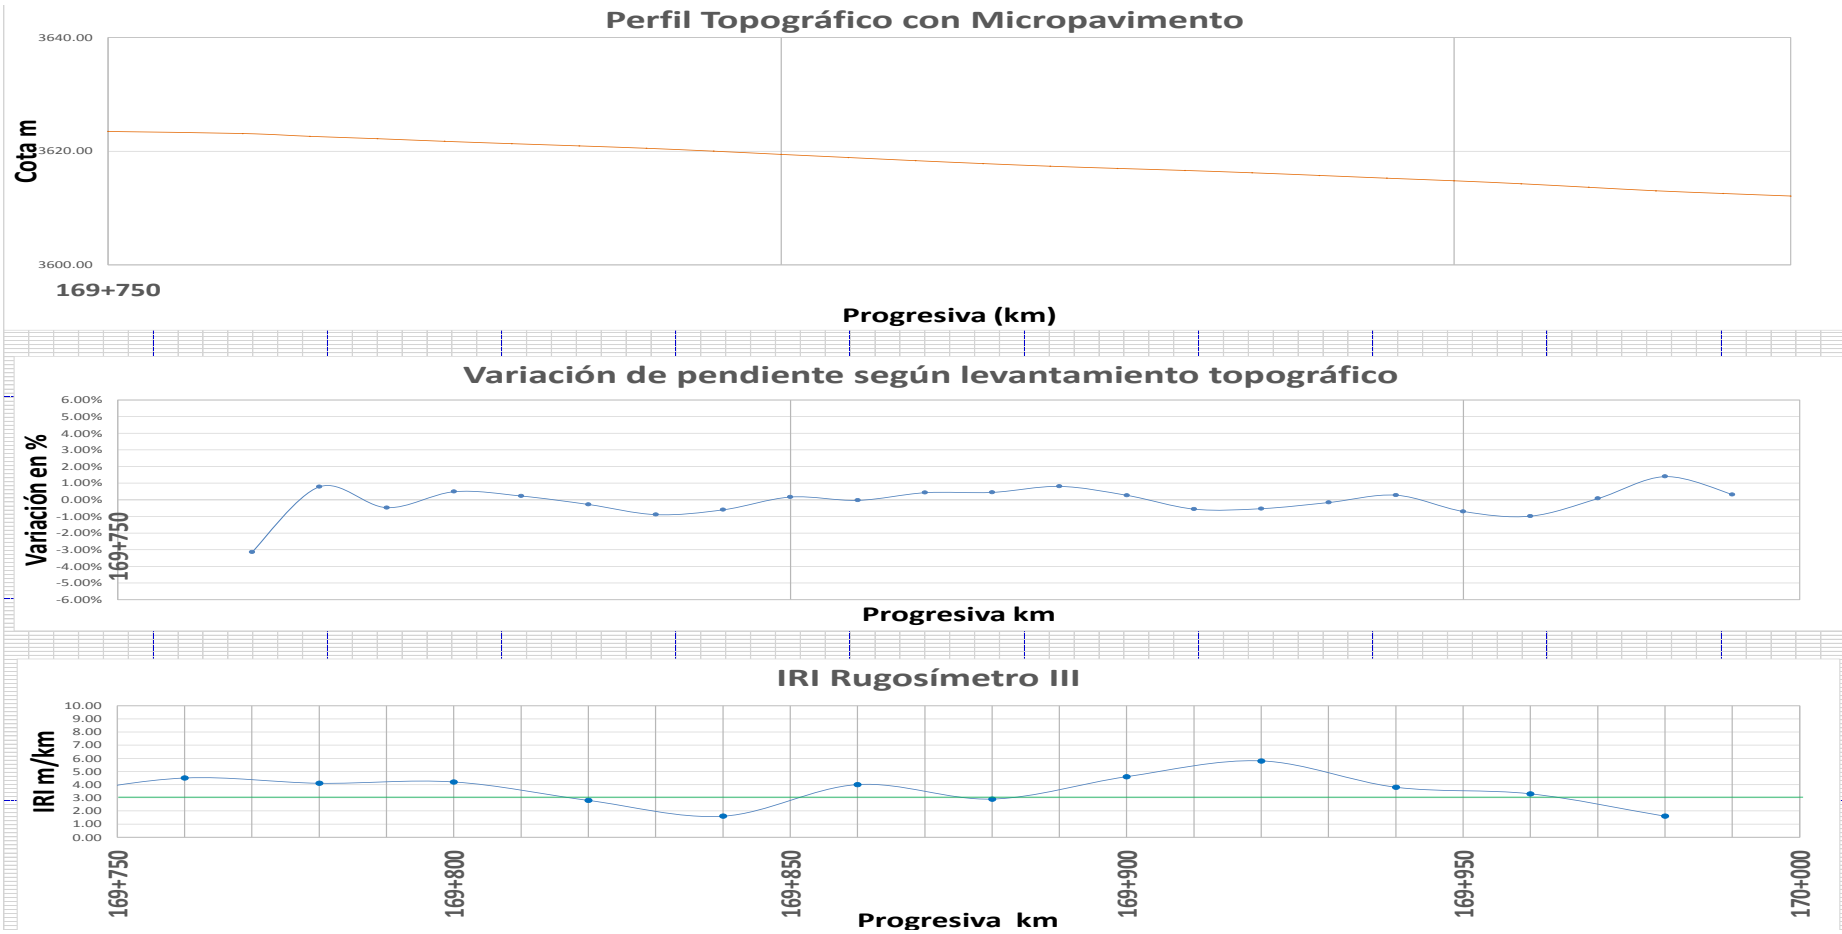

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 166+000-Km169+630

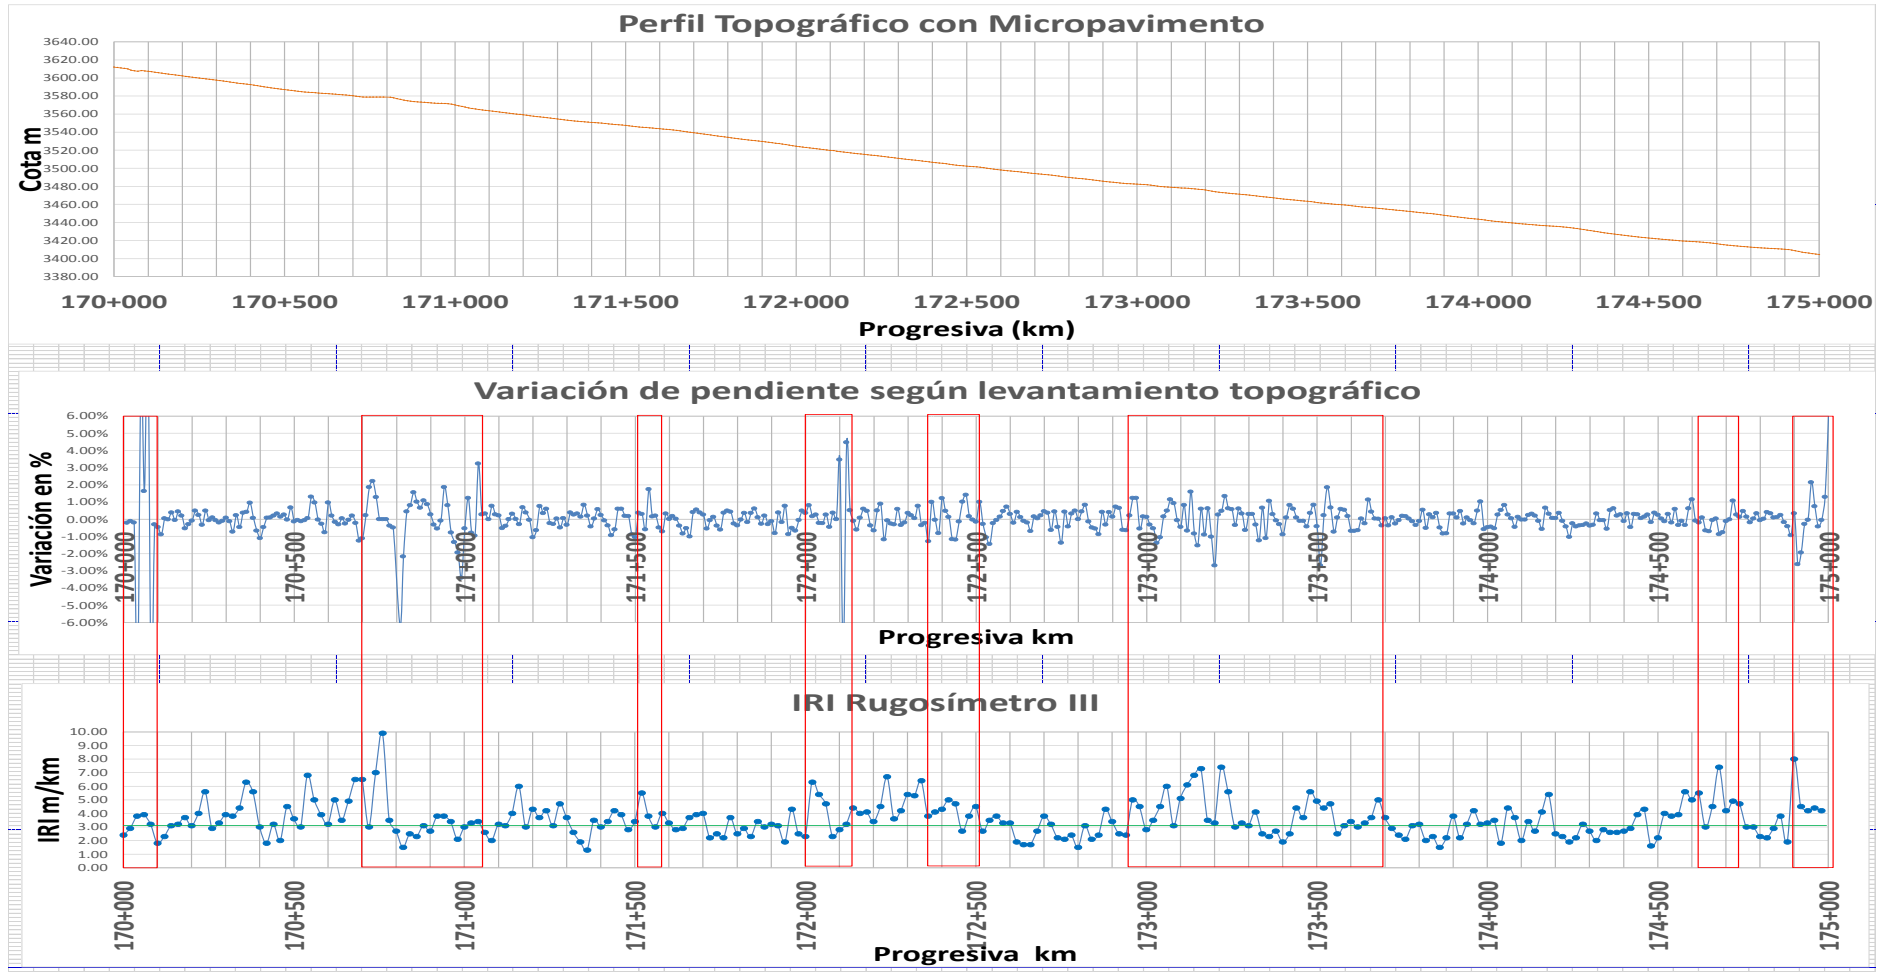

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 169+750-Km170+000

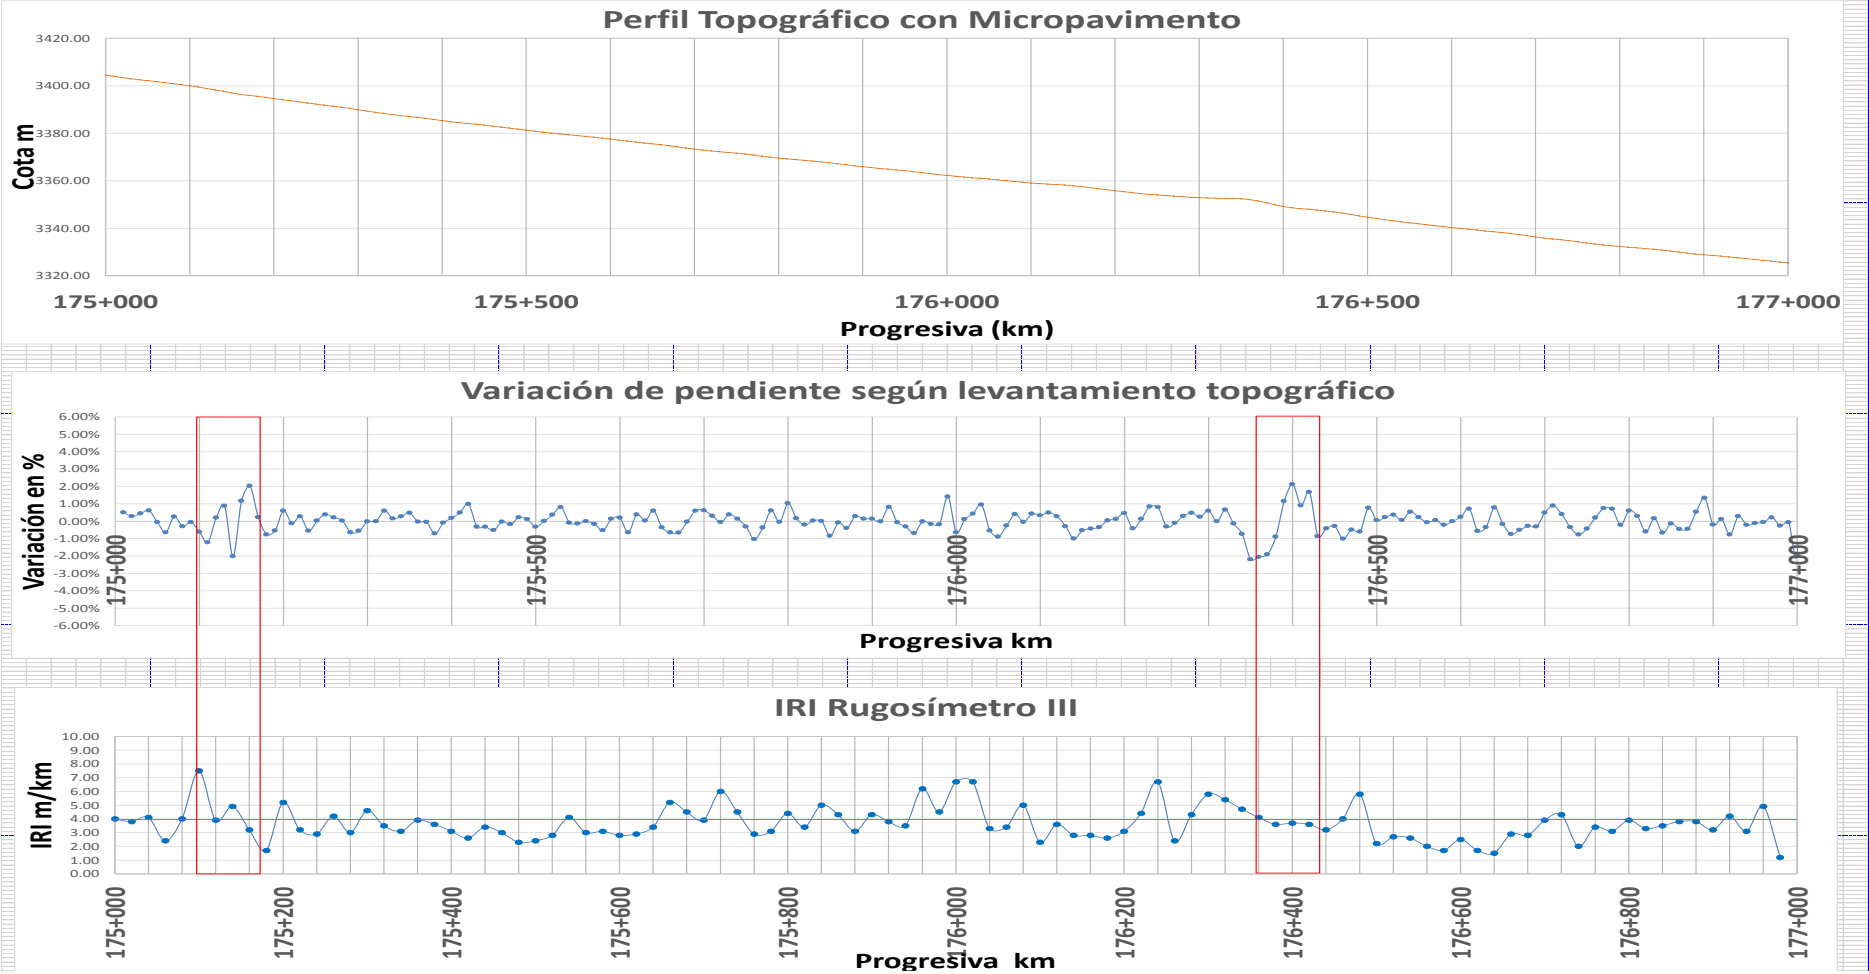

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 170+000- Km 175+000

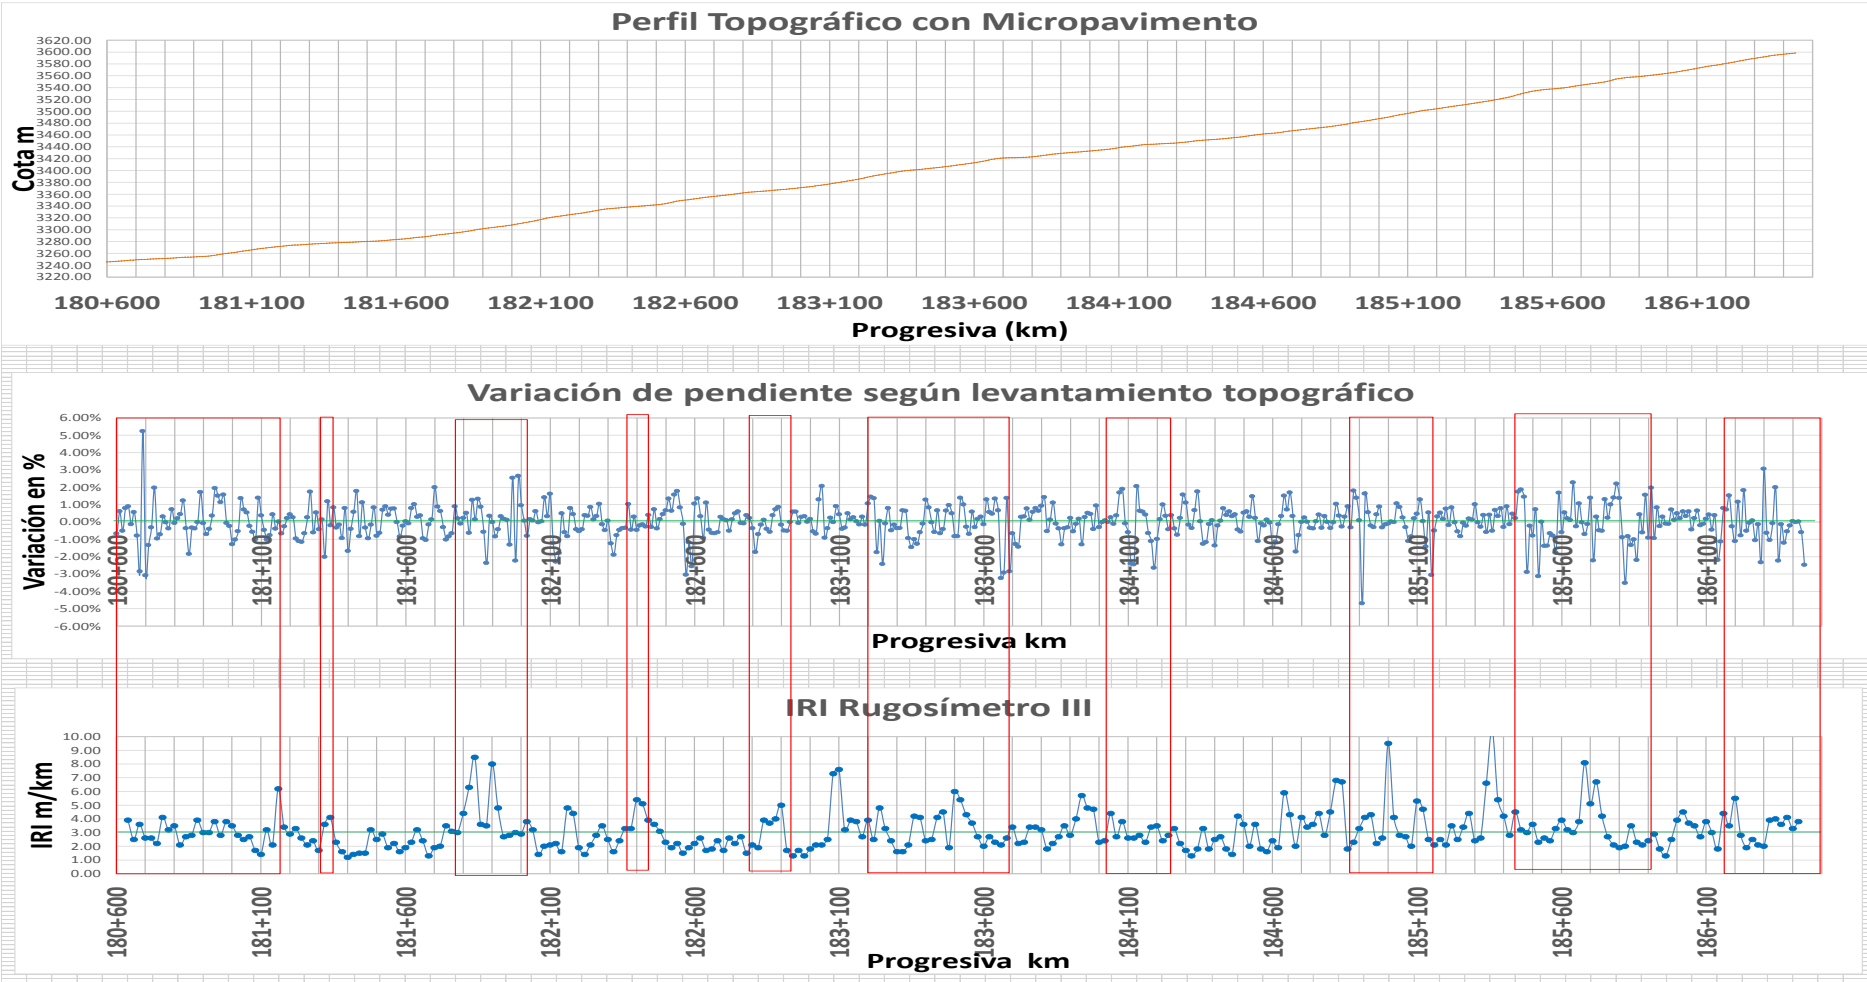

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 175+000-Km177+010

Fuente: Elaboro por el equipo de trabajo

Comparación de perfil topográfico, variación de la pendiente e IRI en el sector Km 180+640-Km186+440

Fuente: Elaboro por el equipo de trabajo

Anexo - 3

Data Nativa IRI con y sin eventos cada 20 m y

Cota rasante del Eje de la Vía con
Micropavimento cada 10 m.

TRAMO II – Chinchaypujio - Cotabambas.

TRAMO II: km 35+380 - km 103+580

CERTIFICATE OF WARRANTY - NEW EQUIPMENT

Date of shipment : September 2012

For Warranty Conditions see back of this document.

Customer name : CONCAR, S.A.

Job reference number : Sales Order 90255

Software / Version supplied : V3.0.2.3 (on hand controller)

(Equipment) User manual(s) supplied : UM-RM3-USR 24/11/2009

Equipment Configuration		
Component Type Number	Component Description	Serial Number
11020.C	Roughometer Controller Assembly	411
11040.C	Roughometer Accelerometer Assembly	541
11040.C	Roughometer Accelerometer Assembly	553
11050.C	Roughometer Interface Assembly	381
11114.C	KMI Rotational Transducer Kit	471
11204.A	GPS Add On	230

WARRANTY

Disclaimer

ARRB Group Ltd makes no representations or warranties with respect to any ARRB Group Ltd software, and specifically disclaims any express or implied warranties of merchantability, title, or fitness for a particular purpose. Distribution of any ARRB Group Ltd software is forbidden without the express written consent of ARRB Group Ltd. Further, ARRB Group Ltd reserves the right to discontinue distribution of any ARRB Group Ltd software.

Limited Warranty

Software upgrades do not extend or modify the warranty on equipment already provided.

Subject always to the provisions of subsequent clauses, ARRB Group Ltd warrants that:

- (a) the software will perform substantially in accordance with the accompanying written materials for a period of 12 months from the date of shipment indicated on this document and
- (b) the hardware will be free from defects in materials and workmanship (under normal use and service in accordance with instructions for use) for a period of 12 months from the date of shipment indicated on this document.

This warranty excludes any faults arising from misapplication, neglect of maintenance requirements, damage in transportation, unauthorised repair or general misuse. ARRB Group Ltd shall, at its absolute discretion, determine whether any defective item shall be repaired or replaced. ARRB Group Ltd shall accept, within the warranty period, costs of return shipment to ARRB Group Ltd or its designated representative, only under circumstances of prior approval.

Customer Remedies

ARRB Group Ltd's entire liability under contract, tort, equity, breach of statutory duty or any other law, regulation or rule and your exclusive remedy in respect of any rights accrued to you and your successors in title and permitted assigns against ARRB Group Ltd, its officers, employees and agents pursuant to any of the foregoing arising from your use of the equipment or software shall be repair or replacement of the software or hardware that does not meet ARRB Group Ltd's limited warranty (as described above) and which is returned to ARRB Group Ltd with your purchase documents within the warranty period.

No Other Warranties

To the extent permitted by law, ARRB Group Ltd disclaims all other Warranties, either express or implied, including but not limited to implied warranties of merchantability and fitness for a particular purpose, with respect to the product, the accompanying written materials or the accessories supplied.

No Liability for Consequential Damages

In no event shall the officers, employees and agents of ARRB Group Ltd or its suppliers be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or other pecuniary loss) arising out of the use or inability to use this product or associated data.

Warranty Service

For warranty service or repair contact ARRB Technology's Customer Support Group in Melbourne, Australia from 08:30 to 17:00 hours (Australian Eastern Standard Time) on Mondays to Fridays (excluding Public Holidays): **Phone:** +61 3 9881 1613; **Fax:** +61 3 9887 9820; **Email:** productsupport@arrb.com.au

2 July 2009

CALIBRATION AND ACCURACY STATEMENT

ROUGHOMETER III

The Roughometer III is a device designed to measure the true profile of any road surface.

The type of vehicle, weight of the vehicle and the characteristics of the suspension components have very little influence on the performance of system.

The Roughometer measures the true road profile using an electronic accelerometer mounted on the axle. This profile is then fed into the same IRI algorithm used by a laser profiler. Consequently it is a true measure of IRI and not an experimental correlation.

SPECIFICATIONS

ACCURACY (Roughness): IRI correlates to better than +/- 0.5 IRI of true IRI
(when operated within design parameters)

RESOLUTION: 0.1 IRI

SURVEY SPEED: 40 to 60 km/h

ACCURACY (Distance): Better than 0.1% (with DMI distance sensor)

ACCURACY

ARRB Group is an Australian government authority specializing in public interest road research. ARRB has a fully certified NATA laboratory and has designed, tested and calibrated the Roughometer III against ASTM E950 Class I laser profiler systems under various road conditions.

The stated accuracy is guaranteed to be met when:

- The system is operated within the design parameters as stated in the User Manual
- The Distance Measuring Device (DMI) is calibrated at the recommended intervals
- The Roughness Sensor (accelerometer) is calibrated prior to installation in the vehicle and re-calibrated by the user every 12 months thereafter

CALIBRATION

Before installing the Roughometer on a vehicle, it is necessary to calibrate the devices that collect the survey data. Calibration is carried out in the vehicle and is performed by the customer. The software provided contains the required procedures and the calibration standards are described below.

Note: There is no requirement for the system to be calibrated and serviced periodically by a certified laboratory or by the ARRB group.

There are no adjustments available for the Roughometer sensors. All sensitivity and adjustment factors are calculated and recorded during the calibration process. These factors are then used by the software when calculating and reporting Road Roughness.

ARRB has designed the system to meet the accuracy specification stated for the life of the product, provided the regular calibration procedures are performed by the customer,

Accelerometer calibration

The roughness sensor must be calibrated by the customer (as described in the manual) prior to mounting on the vehicle. It is recommended that the calibration is repeated annually by the customer, to allow for drift of the electronics over time. There are no mechanical moving parts and no adjustments required to perform an accurate calibration of the sensor. The **calibration standard** or **reference** is the earth's gravity (1g). Each sensor has been pre-tested and calibrated prior to despatch from ARRB's factory and is guaranteed to be within design parameters. However, the calibration procedure outlined in the manual and below must be performed to compensate for variations in altitude and gravity of where the system is to be operated.

The roughness sensor is sensitive to vertical motion. When correctly installed, it will accurately measure the vertical motion induced by the road surface profile as the vehicle is driven along the road. Calibration of the roughness sensor involves measuring the output from the sensor in both the normal and inverted orientations.

1. Hold the sensor against a vertical surface with the **sensor arrow pointing downward** (0 degrees position)
2. The output from the sensor is continuously measured and displayed. Adjust the sensor's vertical alignment (small movements) to achieve the **maximum** output voltage reading. The calibration value will vary from unit to unit but should be around 2.3 V. If the 'new' value differs greatly from the 'old' value or is greater than 3.5 or less than 2.0, repeat the procedure.
3. Rotate the sensor 180 degrees. The display will change to show the sensor output voltage. The displayed voltage in this position will be less than the voltage displayed for the 0 degrees position. Adjust the sensor's vertical alignment to achieve the **minimum** output voltage reading. Typically 1.6 V.

Distance calibration (DMI Sensor)

The distance calibration requires a straight track which has been accurately measured and marked. The track can be from 100 metres to 1000 metres in length. A greater length of track will produce a more accurate calibration. 0.1% accuracy is achieved when the measured track is 1000 metres. Consistent tyre pressures must be maintained when the system is being used.

It is recommended that the distance calibration is performed twice a year to allow for wear of the tyres. If the tyre is changed, or the system is installed on a different vehicle the calibration must be redone.

The accuracy of the calibration is totally dependent on how accurately the track has been measured and marked.

Verification of Calibration

The operator of the Roughometer is responsible for the calibrations and should be able to produce a log book or history sheet detailing the times and dates of the most recent calibrations. The latest calibration factors should also be recorded. Details of the equipment and procedure used to measure and mark the distance calibration should also be recorded.

Yours Faithfully

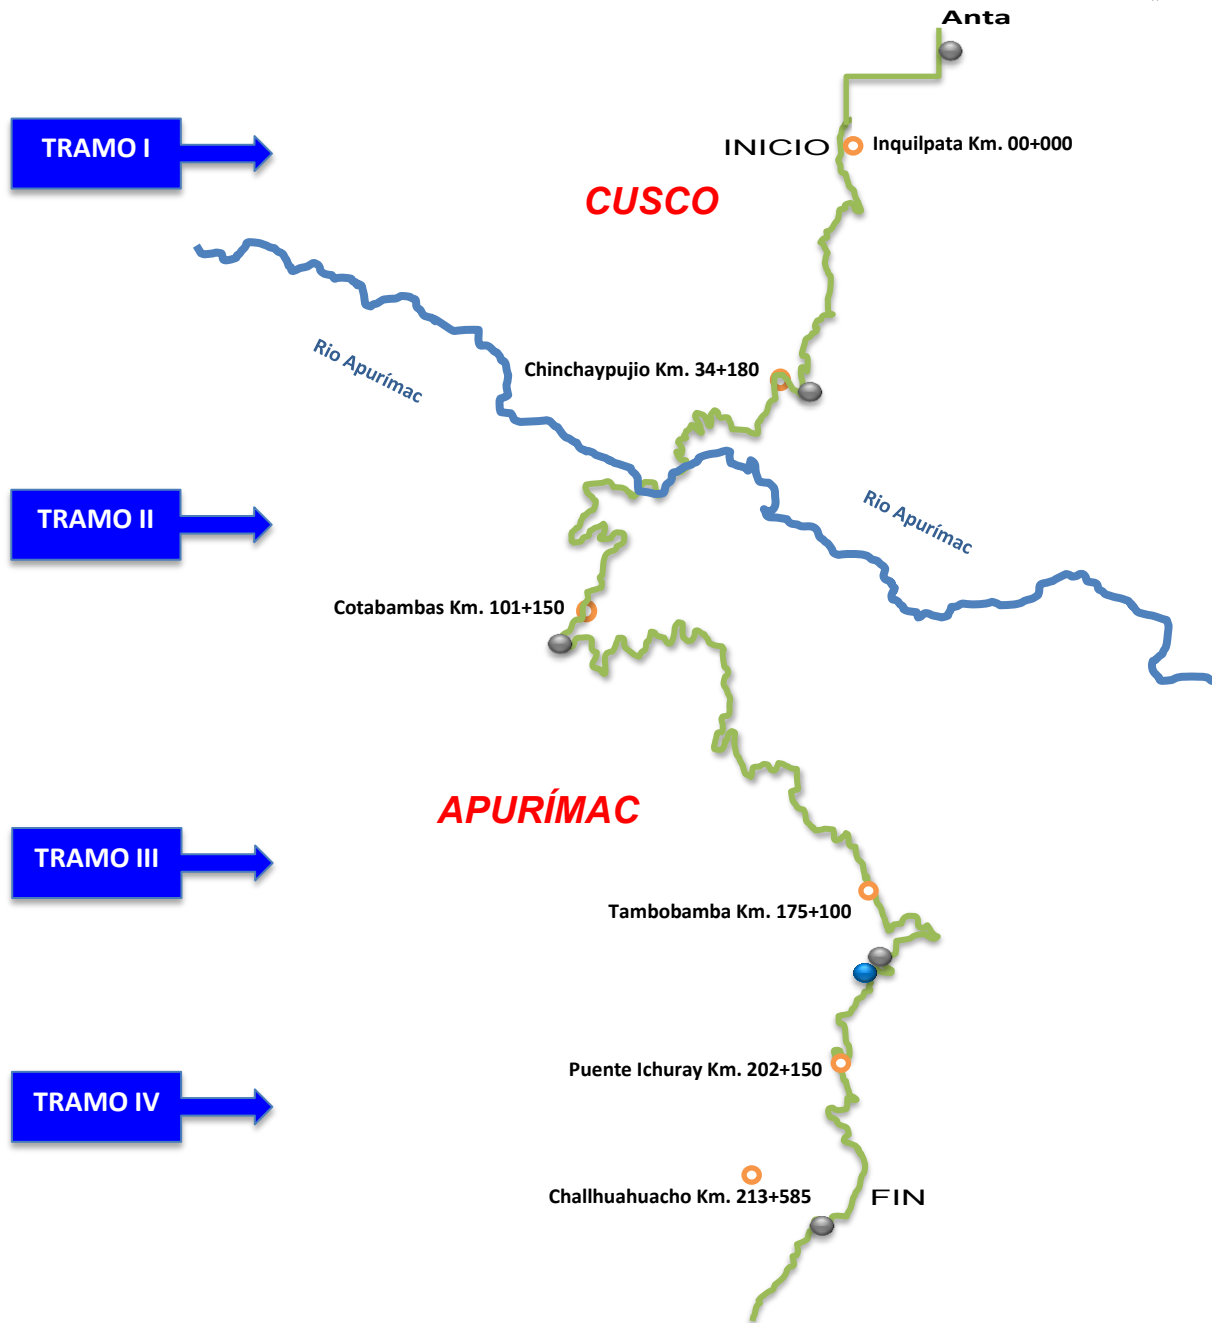

Roland Leschinski
Chief Engineer
ARRB Group
